SLR Consulting Australia Pty Ltd

1 INTRODUCTION

Development consent was obtained by Donaldson Coal Pty Ltd for the Donaldson Mine in October 1999 following a Commission of Inquiry. Development Consent number N97/00147 was issued by the Minister for Urban Affairs pursuant to Section 101 of the Environmental Planning and Assessment Act 1979.

Project Approval (Application No. 05_0136) granted by the Minister of Planning was obtained by Donaldson Coal Pty Ltd for Abel Coal Mine in 2008.

Donaldson Coal Pty Ltd has commissioned SLR Consulting Pty Ltd (SLR Consulting) to conduct quarterly noise monitoring surveys for the Donaldson Coal Mine and Abel Coal Mine in accordance with the Abel Mine Project Noise Monitoring Program, dated 27 May 2008.

The objectives of the noise monitoring survey for this operating quarter were as follows:

- Measure the ambient noise levels at five (5) focus receptor locations (potentially worst affected) surrounding Donaldson Coal Mine and Abel Coal Mine.
- Qualify all sources of noise within each of the attended surveys, including estimated contribution or maximum level of individual noise sources.
- Assess the noise emissions of Donaldson Coal Mine and Abel Coal Mine with respect to the limits contained in the Development Consent.

2 DEVELOPMENT CONSENT AND PROJECT APPROVAL

2.1 Donaldson Coal Mine Development Consent Conditions

The Development Consent nominates hours of operation and mine noise emission goals in the Sections entitled "Operation of Development, Condition No. 3(1) and 3(2)", and "Noise and Vibrational Noise Limits: Condition No. 15" as follows:

"3.(1) Subject to (2) the approved hours of operation are as follows:

| <i>Works</i> | <i>Period</i> | <i>Hours</i> |
|---|--|--|
| <i>Construction, including construction of any bunds</i> | <i>Monday to Friday Saturday</i> | <i>7 am to 6 pm 8 am to 1 pm</i> |
| <i>Mining operations, including mining, haulage of waste to dumps and coal processing</i> | <i>Monday to Friday Saturday, Sunday</i> | <i>24 hours per day 7 am to 6 pm</i> |
| <i>Road Transportation and stockpiling of coal</i> | <i>7 days per week</i> | <i>24 hours per day</i> |
| <i>Rail loading of coal</i> | <i>7 days per week</i> | <i>7 am to 10 pm</i> |
| <i>Maintenance of mobile and fixed plant</i> | <i>7 days per week</i> | <i>24 hours per day</i> |
| <i>Blasting, not involving closure of John Renshaw Drive</i> | <i>Monday to Saturday</i> | <i>7 am to 5 pm</i> |
| <i>Blasting, involving closure of John Renshaw Drive</i> | <i>Monday to Saturday</i> | <i>10 am to 2 pm</i> |

Notes: Restrictions on Public Holidays are the same as Sundays

- (2) *The Applicant shall submit a report to the Director-General's satisfaction demonstrating the noise limits in Condition 15 can be met while rail loading of coal is occurring during the period from 6 pm to 10 pm. If that report does not demonstrate that the noise limits can be met to the Director-General's satisfaction, then the hours of operation for rail loading of coal shall be restricted to 7 am to 6 pm.*
15. *Unless subject to a negotiated agreement in accordance with Condition 23, the Applicant shall ensure that the noise emission from construction or mining operations, when measured or computed at the boundary of any dwelling not owned by the applicant (or within 30 metres of the dwelling, if the boundary is more than 30 metres from the dwelling), shall not exceed the following noise limits:*

| Location | LA10(15minute) Noise Limits (dBA) | |
|-------------------------------|-----------------------------------|------------|
| | Daytime | Night-time |
| Beresfield area (residential) | 45 | 35 |
| Steggles Poultry Farm | 50 | 40 |
| Ebenezer Park Area | 46 | 41 |
| Black Hill Area | 40 | 38 |
| Buchanan and Louth Park Area | 38 | 36 |
| Ashtonfield Area | 41 | 35 |
| Thornton Area | 48 | 40 |

Note: *Daytime is 7 am to 10 pm Monday-Saturday, and 8 am to 10 pm Sundays and Public Holidays. Night-time is 10 pm to 7 am Monday-Saturday, and 10 pm to 8 am Sundays and Public Holidays.*

The noise limits apply for prevailing meteorological conditions (winds up to 3 m/s), except under conditions of temperature inversions.

Other Conditions of Consent relevant to noise are as follows:

- "18. *The applicant shall survey and investigate noise reduction measures from plant and equipment and set targets for noise reduction in each Annual Environmental Management Report (AEMR), taking into consideration valid noise complaints received in the previous year. The Report shall also include remedial measures.*
19. *The Applicant shall revise the Noise Management Plan as necessary and provide an updated Plan five years after commencement of mining to the Director-General, the independent noise expert (Condition 48), EPA, Councils and the Community Consultative Committee.*"

2.2 Abel Coal Mine – Project Approval

The relevant conditions relating to noise from the Abel Coal Mine approval are reproduced below.

Schedule 4

NOISE

Note: These conditions should be read in conjunction with section 3 of the Statement of Commitments.

Donaldson Coal Pty Ltd
Donaldson and Abel Coal Mines
Quarterly Noise Monitoring
Quarter Ending June 2012

Report Number 630.01053-R1
Draft 1
3 August 2012
Page 7

Noise Limits

23 The Proponent shall ensure that the noise generated by the Project does not exceed at any privately-owned residence the levels set out in the following table for the monitoring location nearest that residence.

Table 1: Noise limits dB(A)

| Day | Evening | Night | Location and Locality* |
|------------------|------------------|-----------------------------------|--|
| LAeq(15 minutes) | LAeq(15 minutes) | LAeq(15 minutes) LA1(1 minute) | |
| 50 | 48 | 41 | A Weakleys Dr, Beresfield |
| 50 | 48 | 41 | B Yarrum Rd, Beresfield |
| 43 | 44 | 38 | C Phoenix Rd, Black Hill |
| 41 | 40 | 36 | D Black Hill School |
| 41 | 40 | 36 | E Brown Rd, Black Hill |
| 41 | 40 | 36 | F Black Hill Rd, Black Hill |
| 43 | 41 | 36 | G Buchanan Rd, Buchanan |
| 43 | 41 | 36 | H Mt Vincent Rd, Louth Park |
| 44 | 46 | 38 | I Lord Howe Dr, Ashtonfield |
| 49 | 47 | 40 | J Kilarney St, Avalon Estate |
| 41 | 40 | 37 | K Catholic Diocese (Former Bartter) K1, K2, K3 |
| 46 | 46 | 40 | L Kilshanny Ave, Ashtonfield |

Notes:

- To determine compliance with the LAeq(15 minute) limit, noise from the project is to be measured at the most affected point within the residential boundary, or at the most affected point within 30 metres of a dwelling (rural situations) where the dwelling is more than 30 metres from the boundary. Where it can be demonstrated that direct measurement of noise from the development is impractical, the DECC may accept alternative means of determining compliance (see Chapter 11 of the NSW Industrial Noise Policy). The modification factors in Section 4 of the NSW Industrial Noise Policy shall also be applied to the measured noise levels where applicable.
- To determine compliance with the LA1(1 minute) limit, noise from the project is to be measured at 1 metre from the dwelling façade. Where it can be demonstrated that direct measurement of noise from the project is impractical, the DECC may accept alternative means of determining compliance (see Chapter 11 of the NSW Industrial Noise Policy).
- These limits apply under the relevant meteorological conditions outlined in the assessment procedures in Chapter 5 of the NSW Industrial Noise Policy.
- These limits do not apply if the Proponent has an agreement with the relevant owner/s of these residences to generate higher noise levels, and the Proponent has advised the Department in writing of the terms of this agreement.

* Revised to list alphabetically

Noise Monitoring

24. The Proponent shall prepare and implement a Noise Monitoring Program for the project to the satisfaction of the Director-General. This program must:

- be submitted to the Director-General for approval within 6 months of this approval;
- be prepared in consultation with the DECC; and
- use a combination of attended and unattended monitoring measures to monitor the performance of the project.

2.2.1 Statement of Commitments

3.3 Monitoring

Within 6 months of this approval being granted a Noise Monitoring Program shall be prepared and implemented for the Abel Underground Mine and the Bloomfield CHPP, to the satisfaction of the Director-General. The Noise Monitoring Program shall include a combination of real-time and supplementary attended monitoring measures, and a noise monitoring protocol for evaluating compliance with the noise environmental assessment. This plan will be integrated with the monitoring plans for the Tasman, Donaldson and Bloomfield Mines to provide a single integrated Noise Monitoring Program for all 4 mines.

3 PROCEDURES AND METHODOLOGY

3.1 General Requirements

The operational noise monitoring program was conducted with reference to Development Consent N97/00147 (Donaldson Coal Mine), Project Approval 05_0136 (Abel Coal Mine), and in accordance with Heggies Report 30-1409-R2 dated 27 May 2008 (*Abel Mine Project Noise Monitoring Program*) and AS 1055-1997 "*Acoustics - Description and Measurement of Environmental Noise*".

3.2 Monitoring Locations

Baseline and preceding operational quarterly surveys have been conducted at 11 locations surrounding the Donaldson Mine and Abel Coal Mine sites. With the experience of these previous surveys, it was decided to concentrate noise monitoring at five (5) focus locations that represent the potentially most noise affected areas from Donaldson Mine and Abel Coal Mine during the June 2012 Quarter. The details of the monitoring locations are contained within **Table 1**.

Table 1 Monitoring Locations

| Noise Monitoring Location | Description |
|---------------------------|-------------------------------------|
| A | 98 Weakleys Drive, Beresfield |
| F | Lot 684 Black Hill Road, Black Hill |
| G | 156 Buchanan Road, Buchanan |
| L | 17 Kilshanny Ave, Ashtonfield |
| D | Black Hill School, Black Hill |

A map giving the approximate location of the noise monitoring sites is contained within **Appendix A**.

3.3 Unattended Continuous Noise Monitoring

Environmental noise loggers were deployed for approximately a seven (7) day period between 29 May 2012 and 14 June 2012 at each of the five (5) nominated locations given in **Table 1**. All unattended monitoring equipment was programmed to continuously record statistical noise level indices in 15 minute intervals including the L_{Amax}, LA1, LA10, LA90, LA99, L_{Amin} and L_{Aeq}. The statistical noise exceedance levels (LAN) are the levels exceeded for N% of the 15 minute interval. The LA90 represents the level exceeded for 90% of the interval period and is referred to as the average minimum or background noise level. The LA10 is the level exceeded for 10% of the time and is usually referred to as the average maximum noise level. The L_{Aeq} is the equivalent continuous sound pressure level and represents the steady sound level which is equal in energy to the fluctuating level over the interval period. The L_{Amax} is the maximum noise level recorded over the interval. Instrument calibration was conducted before and after each measurement survey, with the variation in calibrated levels not exceeding ±0.5 dBA.

3.4 Operator Attended Monitoring

Operator attended surveys were conducted at each of the five (5) monitoring locations during daytime, evening and night-time periods, to verify the unattended logging results and to determine the character and contribution of ambient noise sources.

3.5 Equipment Operation

The mobile equipment operating on the Donaldson Mine site during the survey period are contained in **Appendix B**.

During the survey period the following operations were being undertaken:

- Overburden removal and mining was being undertaken in Strips 1 - 7 in the Square Pit.
- Overburden was placed in the East Pit and West Pit.
- The grader and water cart was working on the surface during the reporting period.

The only surface equipment operating on the Abel Coal Mine site during the survey periods was a ventilation fan.

4 OPERATOR ATTENDED NOISE MONITORING

4.1 Results of Operator Attended Monitoring

Operator attended noise measurements were conducted during the daytime on Thursday 14 June 2012 and Tuesday 19 June 2012, during the evening on Monday 18 June 2012 and during the night-time on Monday 18 June 2012. All operator attended noise surveys were conducted using a Brüel & Kjær 2270 Type 1, integrating sound level meter (s/n: 2679354).

The results of the operator attended noise measurements are given in **Table 2** to **Table 6**. Ambient noise levels given in the tables include all noise sources such as traffic, insects, birds, and mine operations as well as any other industrial operations.

The tables provide the following information:

- Monitoring location.
- Date & start time.
- Wind velocity (m/s) and Temperature (°C) at the measurement location.
- Typical maximum (L_{Amax}) and contributed noise levels.

Mine contributions listed in the tables are from Donaldson Mine and Abel Coal Mine and are stated only when a contribution could be quantified.

4.2 Operator Attended Monitoring Summary

4.2.1 Donaldson Mine

Noise generated by local and distant traffic was a significant contributor to noise levels at all monitored locations as well as "natural" noise such as birds, insects and leaf rustle.

Donaldson Mine operations were observed to be audible at Location D Black Hill School and Location F Black Hill Road during the evening and night time periods. Donaldson Mine operations were inaudible at all other locations.

The estimated Donaldson Contribution at Location D and Location F during the evening was approximately LAeq 36 dBA and 37 dBA respectively. This is within the consent noise limits.

The estimated Donaldson contribution at Location D and Location F during the night was approximately LAeq 36 dBA and 34 dBA. This is within the consent conditions.

Based on results and observations from operator attended surveys, it is likely that the contributed noise levels from Donaldson Mine comply with noise emission goals for all periods.

4.2.2 Abel Coal Mine

Noise generated by local and distant traffic was a significant contributor to noise levels at all monitored locations.

Donaldson and Abel Coal Mines
Quarterly Noise Monitoring
Quarter Ending June 2012

Report Number 630.01053-R1
Draft 1
3 August 2012
Page 13

Abel project operations were inaudible at all residential locations during all operator attended noise surveys. As such, it is likely that contributed noise levels from Abel Project did not exceed noise emission goals (including night-time sleep arousal criteria) and were in compliance with Abel Mine Project Approval.

5 UNATTENDED CONTINUOUS NOISE MONITORING

5.1 Results of Unattended Continuous Monitoring

Unattended continuous noise monitoring was conducted between 29 May 2012 and 14 June 2012 at each of the five (5) nominated locations given in **Table 1**. ARL Type EL-316, ARL Type EL-215 and SVAN 957 Environmental noise loggers were used to monitor the ambient noise levels at each location. Details of the noise loggers used for the unattended continuous noise monitoring are given in **Table 7**.

Table 7 Noise Loggers and Noise Monitoring Locations

| Location | Noise Logger Serial Number | Date of Logging |
|-----------------------------------|----------------------------|-----------------------|

The unattended ambient noise logger data from each monitoring location are presented graphically on a daily basis and are attached as **Appendices C1 to C5**. A summary of the results of the unattended continuous noise monitoring is given in

Donaldson Coal Pty Ltd
Donaldson and Abel Coal Mines
Quarterly Noise Monitoring
Quarter Ending June 2012

Report Number 630.01053-R1
Draft 1
3 August 2012
Page 14

Table 8. The ambient noise level data quantifies the overall noise level at a given location independent of its source or character.

The measured ambient noise levels were divided into three periods representing day, evening and night as designated in the NSW Industrial Noise Policy (INP). The day, evening and night periods replace the day and night periods defined under the Environmental Noise Control Manual (ENCM). However, as the Donaldson conditions of consent are under the ENCM, these periods have also been reported.

Precautions can be taken to minimise influences from extraneous noise sources (eg optimum placement of the loggers away from creeks, trees, houses, etc), however, not all these sources or their effects can be eliminated. This is particularly the case during the warmer times of year when noise from insects, frogs, birds and other animals can become quite prevalent.

Weather data for the subject area during the noise monitoring period was provided by Donaldson Coal. Noise data during periods of any rainfall and/or wind speeds in excess of 5 m/s (approximately 9 knots) were discarded in accordance with INP weather affected data exclusion methodology.

Report Number 630.01053-R1
Draft 1
3 August 2012
Page 18

Table 8 and **Figure 1**, **Figure 2** and **Figure 3** show that ambient LA90 noise levels recorded for the quarter ending June 2012 were higher than levels recorded during the baseline monitoring process at Location A by 4 dBA, 6 dBA and 5 dBA were recorded respectively during the daytime, evening and night-time. Increases of 3 dBA were recorded in the daytime, and increases of 11 dBA were recorded in the evening and night-time at Location F.

Given that no data was available at Locations D, G and L during baseline measurements and no monitoring was conducted at Location K during the June 2012 quarter no comparisons can be made.

Previous Quarter (March 2012)

A comparison of the current monitoring period with the previous monitoring period shows that LA90 noise levels were the same or lower than those recorded during March 2012 at Location D, G and L. Increases of 1 dBA, 6 dBA and 6 dBA were recorded respectively in the daytime, evening and night-time periods at Location F. Increases of 1 dBA during the day-time and evening periods were recorded at location A.

Coinciding Period Last Year (June 2011)

A comparison of the current monitoring period with the coinciding monitoring period last year indicates that LA90 noise levels were generally similar (within 4 dBA) or lower than those recorded in 2011 locations F, L and G.

Significant increases (up to 9 dBA) in the LA90 noise levels were recorded at location A during the daytime, evening and night-time periods. It is considered that this is likely due to the impact of local traffic along Weakleys Drive and logging in the industrial area.

 3 August 2012
 Page 20

Figure 6 Long-term Night-time LA10 Noise Levels

Baseline

The summary of results in **Table 8** and **Figure 4**, **Figure 5** and **Figure 6** show that ambient LA10 noise levels recorded for the quarter ending June 2012 were 7 dBA greater than levels recorded during the baseline monitoring process at Location F during the daytime and 4 dBA higher during the evening and 5 dBA higher during the night-time. At Location A LA10 noise levels were either similar to the levels recorded during the baseline monitoring process or up to 3 dBA below.

Given that no data was available at Locations G, L and D during baseline measurements and no monitoring was conducted at Location K during the June 2012 quarter no comparisons can be made.

Previous Quarter (March 2012)

A comparison of the current monitoring period with the previous monitoring period shows that recorded LA10 noise levels at all monitoring locations were similar (within 4 dBA) or lower to those recorded in March 2012.

Coinciding Period Last Year (June 2011)

A comparison of the current monitoring period with the coinciding monitoring period last year indicates that LA10 noise levels were similar (within 3 dBA) or lower than those recorded in June 2011 at location F.

Noise levels at location A, G and L are up to 8 dBA, 11 dBA and 7 dBA higher than during the same period last year respectively.

Given that no data was available at Location D during the June 2011 quarter, no comparisons can be made.

5.3 Discussion

Based on the observations made during the operator attended noise surveys, where noise levels have been observed to increase at location A and Location F, the ambient noise environment is dominated by road traffic, natural noises or logging, and not considered to be impacted from the Donaldson Mine and Abel Mine activity.

6 SUMMARY OF RESULTS AND FINDINGS

SLR Consulting were engaged by Donaldson Coal Pty Ltd to conduct quarterly noise monitoring surveys for Donaldson Coal Mine and Abel Coal Mine in accordance with the Abel Coal Mine Noise Monitoring Program, dated 27 May 2008.

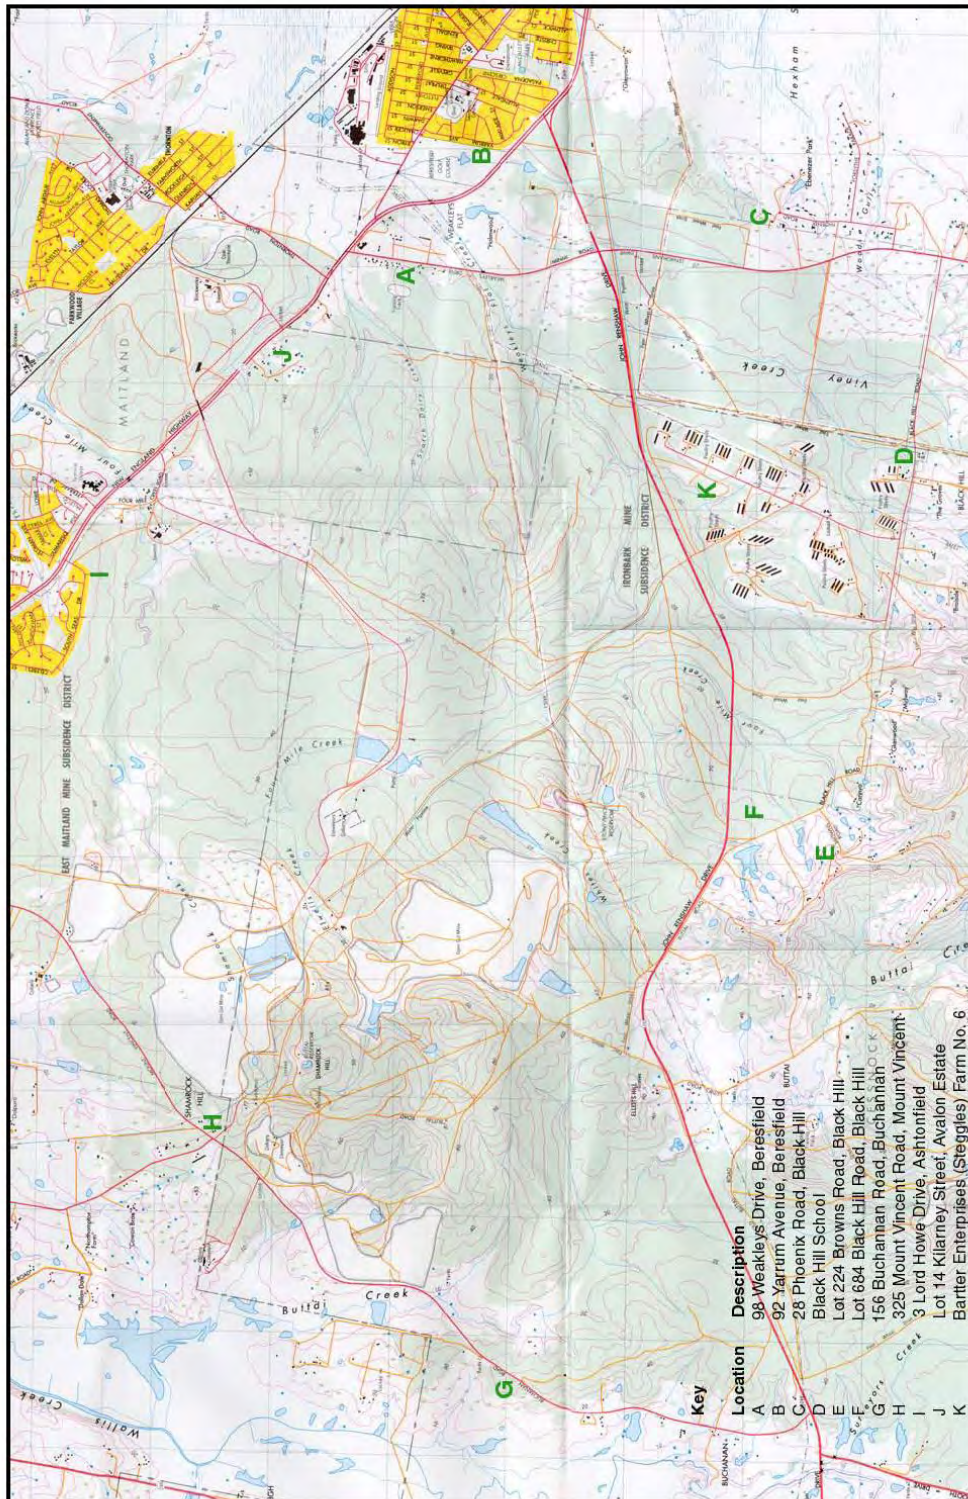

The results of the operator-attended noise measurements conducted at five (5) focus locations surrounding the mine site are included in **Table 2** to **Table 6**.

Based on the results and observations from operator attended surveys, it is likely that contributed noise levels from Donaldson Mine comply with noise emission goals for all periods.

Abel Mine operations were inaudible at all residential locations during all periods and as such it is likely that contributed noise levels from Abel Mine did not exceed noise emission goals (including night-time sleep arousal criteria) and were in compliance with the Abel Mine *Project Approval*.

A comparison of ambient LA10 and LA90 noise levels recorded during the current monitoring period (June 2012), the baseline monitoring period, the last monitoring period (March 2012), and the coinciding monitoring period from last year (June 2011) has been conducted.

In summary, where noise levels have risen, the ambient noise environment has been identified to generally contain traffic and natural noise sources or noise from other local mining and logging operations and not noise from Donaldson Mine or Abel Mine activity.

Quarterly Noise Monitoring
Quarter Ending September 2012

Report Number Q47 630.01053-R1D1
Draft 1
12 October 2012
Page 5

1 INTRODUCTION

Development consent was obtained by Donaldson Coal Pty Ltd for the Donaldson Mine in October 1999 following a Commission of Inquiry. Development Consent number N97/00147 was issued by the Minister for Urban Affairs pursuant to Section 101 of the Environmental Planning and Assessment Act 1979.

Project Approval (Application No. 05_0136) granted by the Minister of Planning was obtained by Donaldson Coal Pty Ltd for Abel Coal Mine in 2008.

Donaldson Coal Pty Ltd has commissioned SLR Consulting Pty Ltd (SLR Consulting) to conduct quarterly noise monitoring surveys for the Donaldson Coal Mine and Abel Coal Mine in accordance with the Abel Mine Project Noise Monitoring Program, dated 27 May 2008.

The objectives of the noise monitoring survey for this operating quarter were as follows:

- Measure the ambient noise levels at five (5) focus receptor locations (potentially worst affected) surrounding Donaldson Coal Mine and Abel Coal Mine.
- Qualify all sources of noise within each of the attended surveys, including estimated contribution or maximum level of individual noise sources.
- Assess the noise emissions of Donaldson Coal Mine and Abel Coal Mine with respect to the limits contained in the Development Consent.

2 DEVELOPMENT CONSENT AND PROJECT APPROVAL

2.1 Donaldson Coal Mine Development Consent Conditions

The Development Consent nominates hours of operation and mine noise emission goals in the Sections entitled "Operation of Development, Condition No. 3(1) and 3(2)", and "Noise and Vibrational Noise Limits: Condition No. 15" as follows:

"3.(1) Subject to (2) the approved hours of operation are as follows:

| Works | Period | Hours |
|--|--------------------------------------|----------------------------------|
| Construction, including construction of any bunds | Monday to Friday Saturday | 7 am to 6 pm 8 am to 1 pm |
| Mining operations, including mining, haulage of waste to dumps and coal processing | Monday to Friday Saturday, Sunday | 24 hours per day 7 am to 6 pm |
| Road Transportation and stockpiling of coal | 7 days per week | 24 hours per day |
| Rail loading of coal | 7 days per week | 7 am to 10 pm |
| Maintenance of mobile and fixed plant | 7 days per week | 24 hours per day |
| Blasting, not involving closure of John Renshaw Drive | Monday to Saturday | 7 am to 5 pm |
| Blasting, involving closure of John Renshaw Drive | Monday to Saturday | 10 am to 2 pm |

Notes: Restrictions on Public Holidays are the same as Sundays

Donaldson Coal Pty Ltd
 Donaldson and Abel Coal Mines
 Quarterly Noise Monitoring
 Quarter Ending September 2012

Report Number Q47 630.01053-R1D1
 Draft 1
 12 October 2012
 Page 6

- (2) *The Applicant shall submit a report to the Director-General's satisfaction demonstrating the noise limits in Condition 15 can be met while rail loading of coal is occurring during the period from 6 pm to 10 pm. If that report does not demonstrate that the noise limits can be met to the Director-General's satisfaction, then the hours of operation for rail loading of coal shall be restricted to 7 am to 6 pm.*
15. *Unless subject to a negotiated agreement in accordance with Condition 23, the Applicant shall ensure that the noise emission from construction or mining operations, when measured or computed at the boundary of any dwelling not owned by the applicant (or within 30 metres of the dwelling, if the boundary is more than 30 metres from the dwelling), shall not exceed the following noise limits:*

| Location | LA10(15 minute) Noise Limits (dBA) | |
|-------------------------------|------------------------------------|------------|
| | Daytime | Night-time |
| Beresfield area (residential) | 45 | 35 |
| Steggles Poultry Farm | 50 | 40 |
| Ebenezer Park Area | 46 | 41 |
| Black Hill Area | 40 | 38 |
| Buchanan and Louth Park Area | 38 | 36 |
| Ashtonfield Area | 41 | 35 |
| Thornton Area | 48 | 40 |

Note: *Daytime is 7 am to 10 pm Monday-Saturday, and 8 am to 10 pm Sundays and Public Holidays. Night-time is 10 pm to 7 am Monday-Saturday, and 10 pm to 8 am Sundays and Public Holidays.*

The noise limits apply for prevailing meteorological conditions (winds up to 3 m/s), except under conditions of temperature inversions.

Other Conditions of Consent relevant to noise are as follows:

18. *The applicant shall survey and investigate noise reduction measures from plant and equipment and set targets for noise reduction in each Annual Environmental Management Report (AEMR), taking into consideration valid noise complaints received in the previous year. The Report shall also include remedial measures.*
19. *The Applicant shall revise the Noise Management Plan as necessary and provide an updated Plan five years after commencement of mining to the Director-General, the independent noise expert (Condition 48), EPA, Councils and the Community Consultative Committee."*

2.2 Abel Coal Mine – Project Approval

The relevant conditions relating to noise from the Abel Coal Mine approval are reproduced below.

Schedule 4

NOISE

Note: These conditions should be read in conjunction with section 3 of the Statement of Commitments.

Noise Limits

23 The Proponent shall ensure that the noise generated by the Project does not exceed at any privately-owned residence the levels set out in the following table for the monitoring location nearest that residence.

Table 1: Noise limits dB(A)

| Day | | Evening | | Night | | Location and Locality* |
|------------------|------------------|------------------|------------------|---------------|---------------|---|
| LAeq(15 minutes) | LAeq(15 minutes) | LAeq(15 minutes) | LAeq(15 minutes) | LA1(1 minute) | LA1(1 minute) | |
| 50 | 48 | 41 | 41 | 51 | 51 | A Weakleys Dr, Beresfield |
| 50 | 48 | 41 | 41 | 51 | 51 | B Yarrum Rd, Beresfield |
| 43 | 44 | 38 | 38 | 50 | 50 | C Phoenix Rd, Black Hill |
| 41 | 40 | 36 | 36 | 46 | 46 | D Black Hill School |
| 41 | 40 | 36 | 36 | 46 | 46 | E Brown Rd, Black Hill |
| 41 | 40 | 36 | 36 | 46 | 46 | F Black Hill Rd, Black Hill |
| 43 | 41 | 36 | 36 | 46 | 46 | G Buchanan Rd, Buchanan |
| 43 | 41 | 36 | 36 | 46 | 46 | H Mt Vincent Rd, Louth Park |
| 44 | 46 | 38 | 38 | 48 | 48 | I Lord Howe Dr, Ashtonfield |
| 49 | 47 | 40 | 40 | 50 | 50 | J Kilarney St, Avalon Estate |
| 41 | 40 | 37 | 37 | 46 | 46 | K Catholic Diocese (Former Barter) K1, K2, K3 |
| 46 | 46 | 40 | 40 | 53 | 53 | L Kilshanny Ave, Ashtonfield |

Notes:

- To determine compliance with the LAeq(15 minute) limit, noise from the project is to be measured at the most affected point within the residential boundary, or at the most affected point within 30 metres of a dwelling (rural situations) where the dwelling is more than 30 metres from the boundary. Where it can be demonstrated that direct measurement of noise from the development is impractical, the DECC may accept alternative means of determining compliance (see Chapter 11 of the NSW Industrial Noise Policy). The modification factors in Section 4 of the NSW Industrial Noise Policy shall also be applied to the measured noise levels where applicable.
- To determine compliance with the LA1(1 minute) limit, noise from the project is to be measured at 1 metre from the dwelling façade. Where it can be demonstrated that direct measurement of noise from the project is impractical, the DECC may accept alternative means of determining compliance (see Chapter 11 of the NSW Industrial Noise Policy).
- These limits apply under the relevant meteorological conditions outlined in the assessment procedures in Chapter 5 of the NSW Industrial Noise Policy.
- These limits do not apply if the Proponent has an agreement with the relevant owners of these residences to generate higher noise levels, and the Proponent has advised the Department in writing of the terms of this agreement.

* Revised to list alphabetically

Noise Monitoring

24. The Proponent shall prepare and implement a Noise Monitoring Program for the project to the satisfaction of the Director-General. This program must:

- be submitted to the Director-General for approval within 6 months of this approval;
- be prepared in consultation with the DECC; and
- use a combination of attended and unattended monitoring measures to monitor the performance of the project.

2.2.1 Statement of Commitments

3.3 Monitoring

Within 6 months of this approval being granted a Noise Monitoring Program shall be prepared and implemented for the Abel Underground Mine and the Bloomfield CHPP, to the satisfaction of the Director-General. The Noise Monitoring Program shall include a combination of real-time and supplementary attended monitoring measures, and a noise monitoring protocol for evaluating compliance with the noise environmental assessment. This plan will be integrated with the monitoring plans for the Tasman, Donaldson and Bloomfield Mines to provide a single integrated Noise Monitoring Program for all 4 mines.

3 PROCEDURES AND METHODOLOGY

3.1 General Requirements

The operational noise monitoring program was conducted with reference to Development Consent N97/00147 (Donaldson Coal Mine), Project Approval 05_0136 (Abel Coal Mine), and in accordance with Heggies Report 30-1409-R2 dated 27 May 2008 (*Abel Mine Project Noise Monitoring Program*) and AS 1055-1997 "Acoustics - Description and Measurement of Environmental Noise".

3.2 Monitoring Locations

Baseline and preceding operational quarterly surveys have been conducted at 11 locations surrounding the Donaldson Mine and Abel Coal Mine sites. With the experience of these previous surveys, it was decided to concentrate noise monitoring at five (5) focus locations that represent the potentially most noise affected areas from Donaldson Mine and Abel Coal Mine during the September 2012 Quarter. The details of the monitoring locations are contained within **Table 1**.

Table 1 Monitoring Locations

| Noise Monitoring Location | Description |
|---------------------------|-------------------------------------|
| A | 98 Weakleys Drive, Beresfield |
| F | Lot 684 Black Hill Road, Black Hill |
| G | 156 Buchanan Road, Buchanan |
| L | 17 Kilshanny Ave, Ashtonfield |
| D | Black Hill School, Black Hill |

A map giving the approximate location of the noise monitoring sites is contained within **Appendix A**.

3.3 Unattended Continuous Noise Monitoring

Environmental noise loggers were deployed for approximately a seven (7) day period between 29 August 2012 and 10 September 2012 at each of the five (5) nominated locations given in **Table 1**. All unattended monitoring equipment was programmed to continuously record statistical noise level indices in 15 minute intervals including the L_{Amax} , $LA1$, $LA10$, $LA90$, $LA99$, L_{Amin} and L_{Aeq} . The statistical noise exceedance levels (L_{AN}) are the levels exceeded for N% of the 15 minute interval. The $LA90$ represents the level exceeded for 90% of the interval period and is referred to as the average minimum or background noise level. The $LA10$ is the level exceeded for 10% of the time and is usually referred to as the average maximum noise level. The L_{Aeq} is the equivalent continuous sound pressure level and represents the steady sound level which is equal in energy to the fluctuating level over the interval period. The L_{Amax} is the maximum noise level recorded over the interval. Instrument calibration was conducted before and after each measurement survey, with the variation in calibrated levels not exceeding ± 0.5 dBA.

SLR Consulting Australia Pty Ltd

3.4 Operator Attended Monitoring

Operator attended surveys were conducted at each of the five (5) monitoring locations during daytime, evening and night-time periods, to verify the unattended logging results and to determine the character and contribution of ambient noise sources.

3.5 Equipment Operation

The mobile equipment operating on the Donaldson Mine site during the survey period are contained in **Appendix B**.

During the survey period the following operations were being undertaken:

- Overburden removal and mining was being undertaken in Strips 1 - 7 in the Square Pit.
- Overburden was placed in the East Pit and West Pit.
- The grader and water cart was working on the surface during the reporting period.

The only surface equipment operating on the Abel Coal Mine site during the survey periods was a ventilation fan.

4 OPERATOR ATTENDED NOISE MONITORING

4.1 Results of Operator Attended Monitoring

Operator attended noise measurements were conducted during the daytime on Monday 3 September 2012 and Wednesday 5 September 2012, during the evening on Monday 3 September 2012 and during the night-time on Monday 3 September 2012. All operator attended noise surveys were conducted using a Brüel & Kjær 2270 Type 1, integrating sound level meter (s/n: 2679354).

Results of the operator attended noise measurements are given in **Table 2** to **Table 6**. Ambient noise levels given in the tables include all noise sources such as traffic, insects, birds, and mine operations as well as any other industrial operations.

The tables provide the following information:

- Monitoring location.
- Date & start time.
- Wind velocity (m/s) and Temperature (°C) at the measurement location.
- Typical maximum (L_{Amax}) and contributed noise levels.

Mine contributions listed in the tables are from Donaldson Mine and Abel Coal Mine and are stated only when a contribution could be quantified.

4.2 Operator Attended Monitoring Summary

4.2.1 Donaldson Mine

Noise generated by local and distant traffic was a significant contributor to noise levels at all monitored locations as well as "natural" noise such as birds, insects and leaf rustle.

Donaldson Mine operations were observed to be audible at Location D Black Hill School during the daytime, evening and night time periods and at Location F during the evening and night-time periods. Donaldson Mine operations were inaudible at all other locations.

The estimated Donaldson Contribution at Location D during the day-time was approximately LAeq 33 dBA. This is within the consent noise limits.

The estimated Donaldson Contribution at Location D and Location F during the evening was approximately LAeq 33 dBA and 37 dBA respectively. This is within the consent noise limits.

The estimated Donaldson contribution at Location D and Location F during the night was approximately LAeq 33 dBA and 38 dBA. This is within the consent conditions with the exception of Location F which is now a mine owned property and therefore the noise limits do not apply in accordance with Condition 15 of the consent conditions.

Based on results and observations from operator attended surveys, it is likely that the contributed noise levels from Donaldson Mine comply with noise emission goals for all periods.

4.2.2 Abel Coal Mine

Noise generated by local and distant traffic was a significant contributor to noise levels at all monitored locations.
