NBN SBS

PUBLIC NOTICE
NBN LIMITED and SBS CORPORATION

NBN Television and SBS Corporation advise that they commenced a test transmission of 3D TV (stereoscopic video format) on or after midnight, Wednesday 19th May 2010. The transmission is of a trial nature only, and is scheduled to operate for a period of 9 weeks. This transmission originates from two inner city transistor sites only, located at Cooks Hill and Charlestown on Channel 35 (578.375Mhz). The digital service channel number is Channel 40. The transmission carries 3D video content in H.264 (MPEG-4) format and will not necessarily be able to be received on current HDTV receivers. Only specific 3DTV receivers will be capable of decoding the signal and displaying the video content in stereoscopic format.

If this test transmission causes interference to other radio communications or problems with your digital television tuning or reception, please contact one of the following:

Digital Engineering Manager, NBN Television, PO Box 750 Newcastle NSW 2300

PUBLISHERS NOTICE

All advertisements are accepted subject to the approval of Newcastle Newspapers Pty Ltd., publisher of "The Herald ("The Publishers") who reserves its rights at all times to refuse publication of advertisements in whole or part. In reserving its rights, the Publisher endorses the Australian Publisher's Bureau's Advertising Code of Practice. Whilst every effort will be made to publish advertisements as ordered, no liability can be accepted for the misplacement, amendment, omission or failure to publish in the form ordered. The Publishers reserves the right to classify an advertisement, edit or delete any wording considered objectionable or reject advertising which in their opinion may be considered unsuitable for publication.

If any material, statement, information or matter contained in any advertisement submitted is in breach (whether directly, by inference or otherwise) of any Statute, Regulation or other law whatsoever and the Publishers suffer any penalty by reason of or arising from the publication of such advertisements, the Advertiser and/or the Advertising Agent shall indemnify (jointly as well as separately) the Publishers against the amount of any such penalty and shall pay the amount thereof. The acceptance and publication of the advertisement by the Publishers shall be deemed to be the consideration for the granting of such indemnity and such indemnity shall operate by virtue of the provisions of this rule without the necessity for the execution of any other document by the Advertiser or Advertising Agent.

The Advertiser must pay the full price for every advertisement published by the Publisher notwithstanding: (a) any error or alteration in the advertisement; (b) the position of the advertisement, and/or (c) any variation of the size of the advertisement during the production process.

The display advertising and classified advertising rates specified in the Rate Card are not open for acceptance but are indicative only. The Publishers reserve the right to alter the rates at any time or impose a casual or other lineage rate to any display or classified advertising expenditure of the Advertiser or Advertising Agent.

The Advertiser or Advertising Agent shall be liable for any sales tax, GST or any other levy, duty or tax that may apply to the rates as quoted from time to time. The Publisher shall charge the GST amount on the Advertiser's invoice in an appropriate form for GST purposes.

Baby Talk

THE HERALD

Babies of 2010

The Herald will publish a special coloured lift out magazine, Baby Talk - Babies of 2010, introducing the babies born in Newcastle and surrounding regions throughout the year on Monday 24th January 2011.

This is a unique opportunity to show off your pride and joy to the thousands of readers of The Herald, as well as providing a lasting keepsake for you and your family.

To register your interest please call Herald Classifieds on 131 696 or email osmith@newcastle.fairfax.com.au and we will post or email you an application form and further details. The cost of the publication of your baby's treasured photo is $66 (single) or $88 (twin) including full colour.

HERE'S YOUR FIRST BRIEFING.

The Navy, Army and Air Force are recruiting for a range of positions in pilots. So if great pay, travel and professional development opportunities, the chance to work in a focused team environment and a whole lot of adventure sounds like a task you need to accept, then come to the next information session to see where your skills could take you.

Monday 28th June, 2010 at 6:30pm, 528 Hunter Street. To book your seat call 13 19 01.

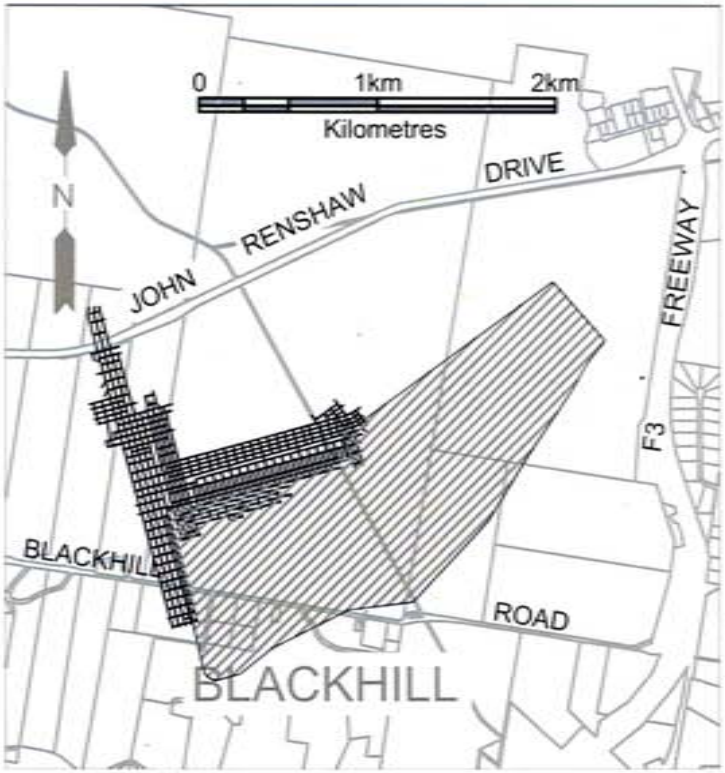
donaldson coal

Donaldson Coal Pty Ltd ABN 87 073 088 945

Donaldson Coal is developing a Subsidence Management Plan (SMP) to accompany an application to Industry & Investment NSW for Pillar Extraction mining at Abel Mine in the SMP application Area 2 outlined below. Once prepared the draft plan will be advertised and displayed for comment.



Any person wishing to provide input to the preparation of the plan can contact the mine on (02) 40151100

Community Information Line
1800 111 271

Welcome to the Abel Underground Mine Community Newsletter.

Abel is an underground coal mine owned by Donaldson Coal, which commenced operation in March 2008.

Coal is extracted using the bord and pillar method, which uses continuous miners for first workings and secondary extraction. This two stage process accommodates irregular shaped coal deposits, enables adjustment to extraction to control subsidence and maximizes the efficiency of the operation.
To date it has produced over 965,000 tonne of Run of Mine (ROM) coal.
The mine is currently manned by over 167 employees and 14 contractors.
An increasing number of Donaldson's employees have joined the mine through an innovative training program developed to equip inexperienced miners with the skills to work in an underground coal mine. In addition to helping meet Donaldson's needs, the program has provided an innovative way for people to learn new skills and gain entry into the mining industry.

Donaldson Coal takes its environmental responsibility very seriously and at present is conducting amphibian and aquatic studies within the project area.
The mine is also in the process of developing a Subsidence Management Plan (SMP) for application Area 2 and is seeking community feedback. Please see the back page of the newsletter for a map and further information.

Helping the Local Community

John Renshaw Drive / Black Hill Intersection

From its inception, Donaldson Coal has made a commitment to support vital programs to address issues such as skill shortages and unemployment, education and the environment in local lower Hunter communities.

To ensure this commitment is properly administered, the company has set up a number of Trusts and allocated funds to allow them to take the initiative.

The Donaldson Job Creation Trust is designed to fund programs to help generate employment in the Hunter Region. The Donaldson Conservation Trust funds environmental initiatives, and the Donaldson Community Trust helps local communities achieve their objectives.

The Trusts are independently administered by representatives from both Donaldson and the community, ensuring that target areas and issues important to the local community are identified.

In addition to the Trusts, Donaldson Coal also supports a range of local projects. To help improve road safety, for example, Donaldson contributed $250 000 towards the upgrade of the Black Hill Road intersection on John Renshaw Drive.

Donaldson Conservation Trust

Donaldson Coal takes its environmental responsibility very seriously and for this reason has committed to contributing $1-million over ten years to environmental conservation.

The Donaldson Conservation Trust has been set up specifically to fund environmental education, research, environmental management works or activities within State Conservation Area lands or other environmentally valuable lands that lie within or above Donaldson's mining leases, exploration licenses or other land owned by the company.

The Trust has recently commissioned the development of a multilayered GIS computer model that incorporates significant natural and man-made features within the geographical area, including information sourced from all public domain data and private studies. This report will form the basis for all decision making to ensure that funds are most appropriately spent.

The Trust has also recently released $22,000 in funds for a terrestrial bat study as part of PHD study being undertaken by a student at Newcastle University.

Donaldson Community Welfare Trust

To contribute to community welfare, Donaldson Coal has committed $250,000 over five years on educational needs, community works or other activities of benefit to the community within the Abel Underground Mine Area.

The Donaldson Community Welfare Trust allocates funding every six months, with a minimum of $10,000 dedicated to educational projects linked to Black Hill Public School each round. An additional $15,000 is made available for other projects of benefit to the community within the Abel underground mine area.

In addition to funding for the School, the Trust has recently provided $12,000 in funding for the restoration of the historical cemetery at Black Hill and $30,000 for the Benwerrin Rural Fire Brigade Station.

Benwerrin Rural Fire Brigade Station.

Donaldson Job Creation Trust

Through the Donaldson Job Creation Trust, Donaldson Coal has given the undertaking to distribute $1-million to encourage employment and training in the Hunter region, not just within the mining industry but across a range of industries.

The aim of this Trust is to provide training and job experience to improve the ability of people to compete in the job market, and fill skills gaps in the Region.

Since 2002, the Job Creation Trust has funded a number of training programs run by the Hunter Valley Training Company, including a number of school based courses specifically designed to help youth at risk.

A grant has also been given to the Maitland Region Art Gallery to further support local talent and boost its promotions effort with the appointment of a full-time graphic designer.

Trainees at Hunter Valley Training Company with HVTC Chair Milton Morris and Mark McPherson

Donaldson Coal

Abel Mine

SMP STAKEHOLDER MEETING

ABEL SMP AREA 2

9 September 2010

Agenda

- Introduction and Meeting Objectives
- Donaldson Coal Background
- The Subsidence Management Plan (SMP) Process
- Abel Mine
  - Project Approval
  - Mine Planning
  - Mining Methods
  - Area 1
  - Area 2
  - SMP Area Surface Environment Assessment
- SMP Area 1 Approvals and conditions, Management Plans, Monitoring Programs

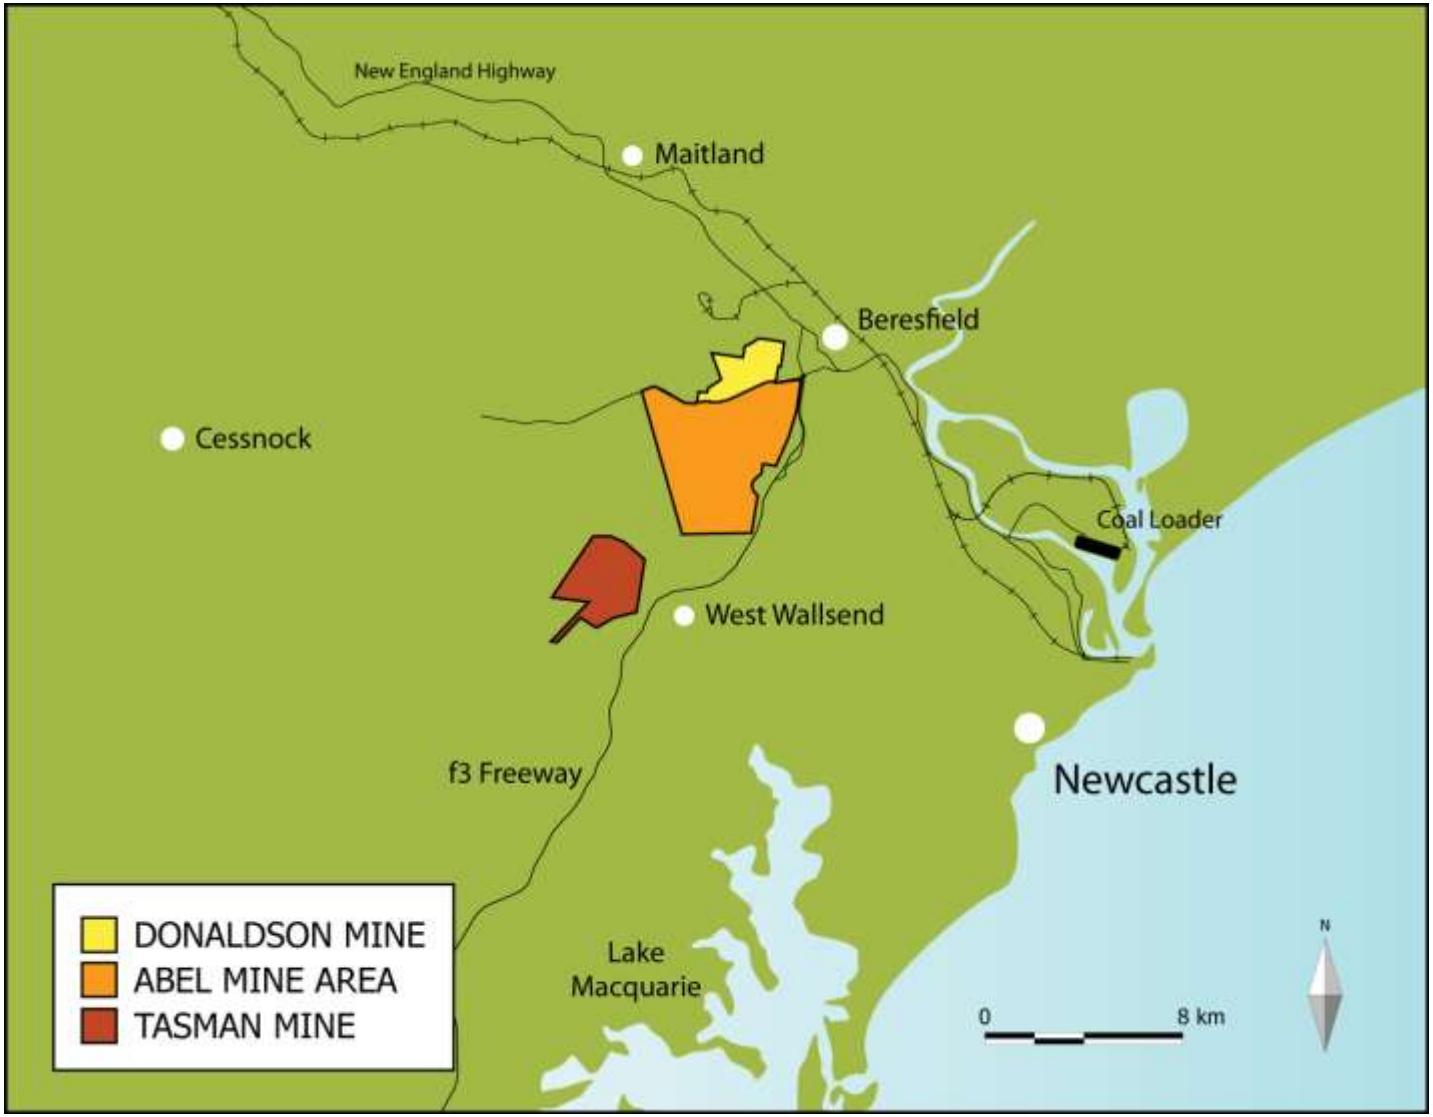
Agenda

- Panel 1 (SMP Area 1) Progress to date
- Subsidence Results Panel 1, impacts and remediation
- SMP Area 2 Key surface features
  - Man made and Natural features potentially impacted by subsidence, including
    - Properties
    - Roads
    - Powerlines
    - Waterlines
    - Dams
    - Other infrastructure
- Abel SMP Area 2 Subsidence Assessment and Predictions
- Abel SMP Area 2 Subsidence Impacts
- Abel SMP Area 2 Proposed Monitoring
- Abel SMP Area 2 Mining Schedule
- Field Visit SMP Area 1/2

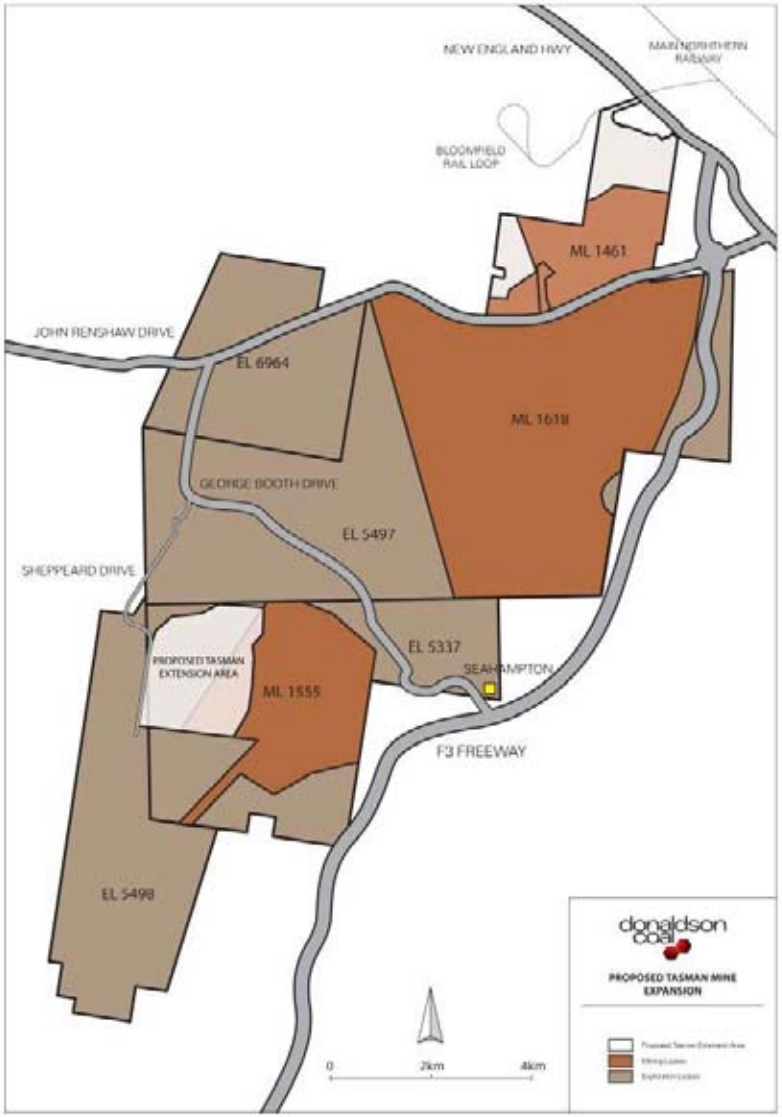
Meeting Objectives

1. Provide interested parties with an introduction to both the Subsidence Management Planning Process, review the approval procedure, update the results of mining Area 1 to date and outline the planning and baseline studies conducted in relation to the Abel mining proposal for Abel Area 2.
2. Consult with interested parties to identify any potential issues or relevant concerns to be considered and addressed in the preparation of the Subsidence Management Plan for Abel Area 2.

Location of Donaldson Coal Operations



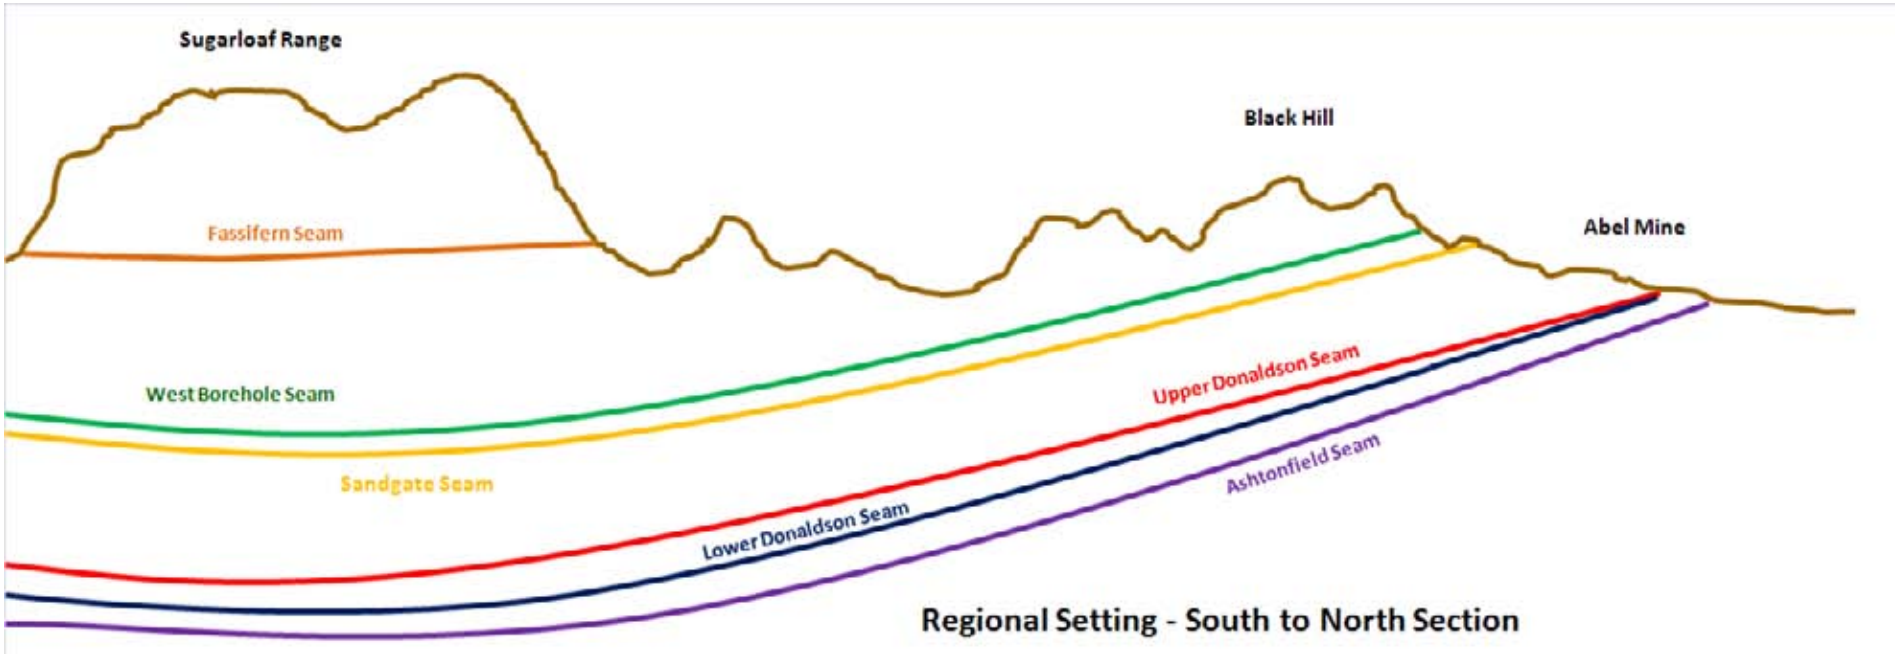
Lease Areas



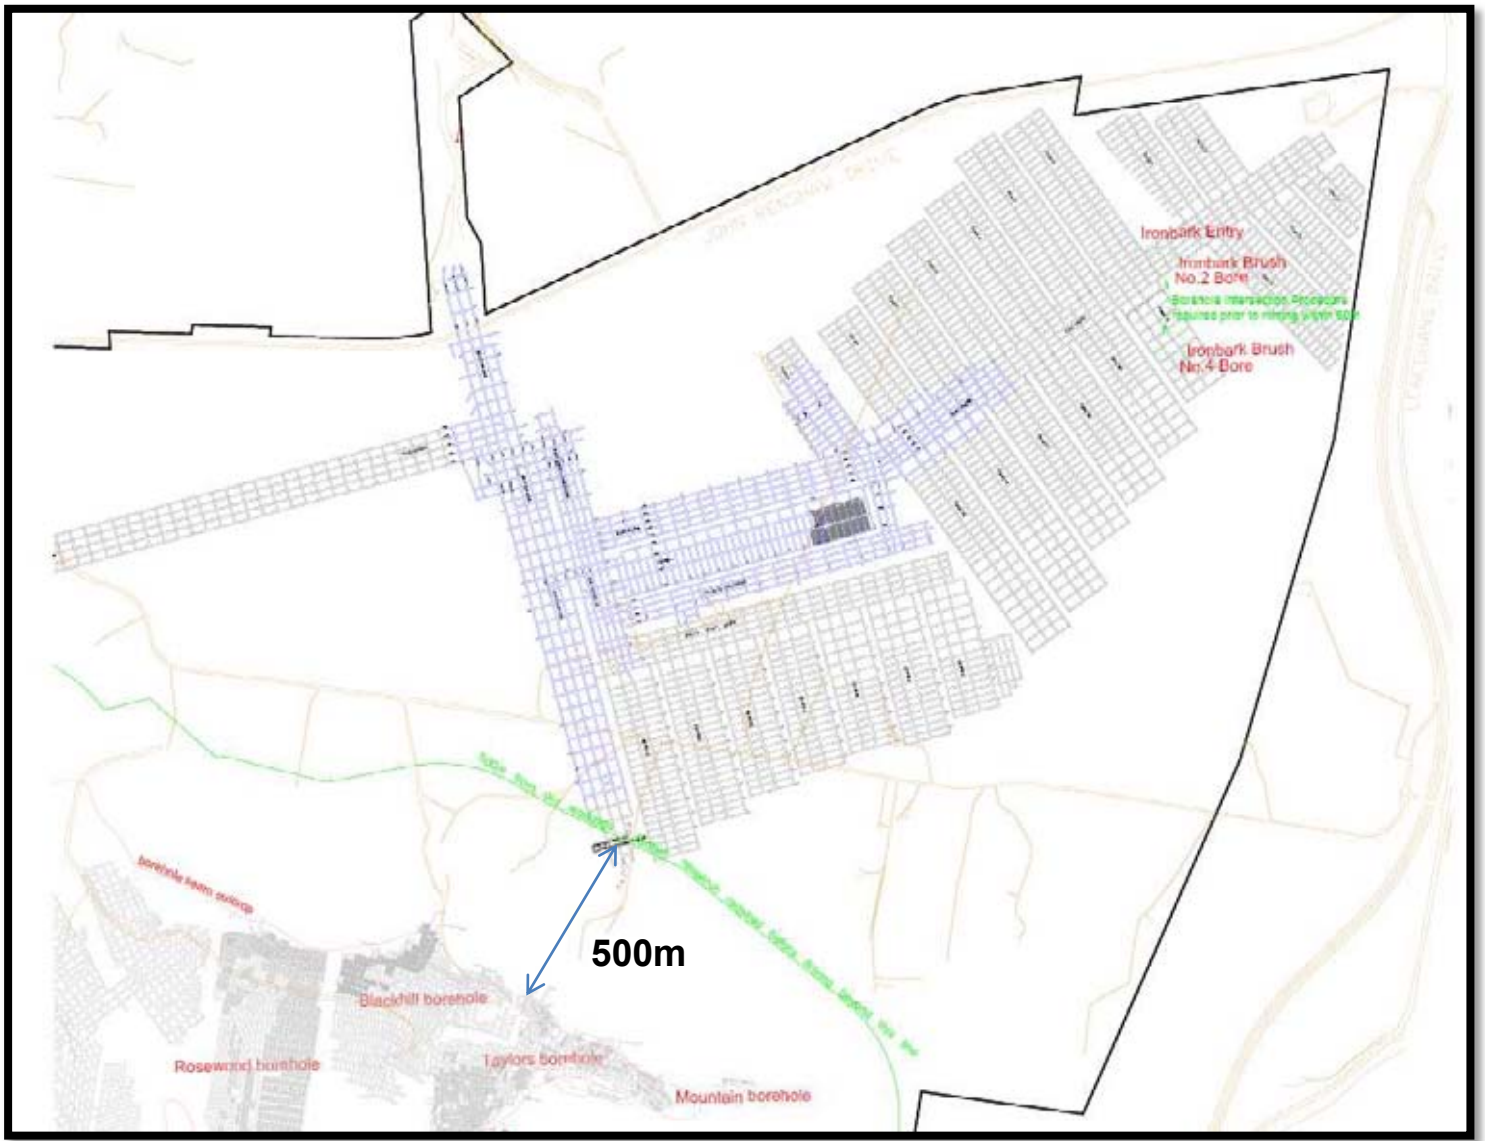
- Current Mining Leases:
  - ML 1461 (Donaldson O/C)
  - ML 1618 (Abel U/G)
  - ML 1555 (Tasman U/G)
- Current Exploration Areas:
  - EL 5337 (Tasman)
  - EL 5498 (Tasman)
  - EL 5497 (Abel)
  - EL 6964 (Abel)

Geological & Mining Setting

- Target seams are part of the East Maitland/Tomago district Four Mile creek formation
- Seams dips to south



Old Workings Borehole Seam



SMP Application Process

- Approval process introduced in March 2004 for the management of coal mining subsidence (*New Approval Process for Management of Coal Mining Subsidence – NSW)*

- Condition of Abel's Mining Lease 1618 that the leaseholder shall prepare a Subsidence Management Plan prior to commencing underground mining operations which will potentially lead to subsidence of the land surface

- This SMP process is currently being reviewed by Industry & Investment and Department of Planning.

Definitions

- **Subsidence-** Vertical movement of the land surface caused by underground coal mining. For the purposes of the SMP approval process, subsidence is defined as mining-induced movements and deformations at the ground surface where:
  - *i) the vertical downward surface movements are greater than 20mm; or*
  - *ii) the potential impacts on major surface infrastructure, structures or natural features may be significant, notwithstanding that the vertical downward surface movements are less than 20mm.*
- **Mitigation Measures –** Subsidence management measures which aim to reduce subsidence impacts, usually implemented prior to or during mining.
- **Remediation Measures –** Subsidence management measures which aim to repair any adverse effects of subsidence, usually implemented after mining.
- **First workings-** Roadways driven to form pillars. Development of main headings and panel roads to establish access to the coal in the Pillar Extraction panels.
- **Second workings** – Extraction of coal from pillars formed during development.

Definitions

- **Full extraction** - Systematic mining of all safely accessible coal within the formed pillars
- **Partial extraction** – Mining of a only a proportion of the formed pillars to reduce subsidence
- **Public Safety Management Plan** - prepared in consultation with I & I to ensure public safety in the mining area.
- **Principal Residence –**Principal Residence existing and defined at the date of Project Approval of this project. A Principal Residence is defined as an existing building capable of being occupied as a separate domicile and used for such purpose. Basically the main residential building on a property.
- **Effective subsidence –** 95% of predicted subsidence has occurred.
- **Goaf –** The mined-out area into which the immediate roof strata break.

Definitions

- **Statement of Commitments -** The commitments by Donaldson Coal Pty Limited set out in Appendix 3 of the Project Approval.
- **Safe, serviceable & repairable -** Safe means no danger to users, serviceable means available for its intended use, and repairable means damaged components can be repaired
- **SMP –** Subsidence Management Plan
- **Angle of Draw –** The angle between the vertical line joining the edge of the mining void with the limit of vertical subsidence (usually taken as 20mm) at the surface
- **Cover Depth –** The depth of the coal seam from the ground surface (metres)
- **Property Management Plan –** Developed by Donaldson Coal in consultation with the property owner and Mine Subsidence Board to address the management / mitigation of any subsidence impacts.

SMP Requirements

- **SMP Area 2 Application to include:**
  - Description of the surface area
  - Mine workings and extraction schedule
  - Subsidence predictions
  - Assessment of impacts and socio-economic benefits
  - Extracts of relevant conditions from Project Approval, Leases, Licences, Approvals
  - Description of previous subsidence predictions, results and impact assessments from previous approvals
  - Baseline monitoring / assessment including flora, fauna, surface water and groundwater
  - Monitoring proposals
  - Proposals to minimise surface impacts where required
  - Proposals for ground and surface water management
  - Proposals for rehabilitation if or where necessary
  - Results of consultation with relevant stakeholders (community)
  - Results of Risk Assessments carried out for the SMP Application
  - Details of ongoing community consultation process

SMP Preparation Stages

- **Stage 1 – Information Collection and Review**
  - Initial Consultation and Advertisement
  - Review of Statutes, Baseline Monitoring, Subsidence Prediction, Mine planning and initial Mine layout
- **Stage 2 – SMP Development**
  - Assessment and consideration of community input (Stakeholder Meeting, CCC)
  - Impact and Risk Assessment, monitoring program, mitigation / rehabilitation planning
  - Finalise Mine plan
  - Preparation of SMP written report and Subsidence Management Plan
- **Stage 3 – Assessment**
  - Submission of application to Industry & Investment NSW
  - Advertise and public display – opportunity for comment and submission
  - SMP Inter Agency review committee and Industry & Investment NSW assessment

SMP Preparation Stages

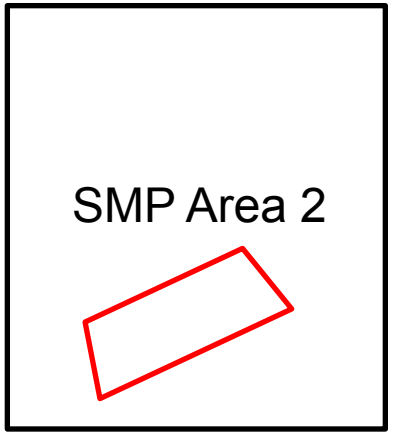
- **Stage 4 – Implementation if Approval Granted**
  - Implement SMP subject to Approval Conditions

- **Stage 5 – Reporting, Review and Ongoing Consultation**
  - Review monitoring results in relation to predictions
  - Review impacts in relation to predictions
  - Report monitoring results, impacts and compliance with SMP through AEMR, reporting as required by Approval Conditions and through Community Consultation Process

Abel Mine

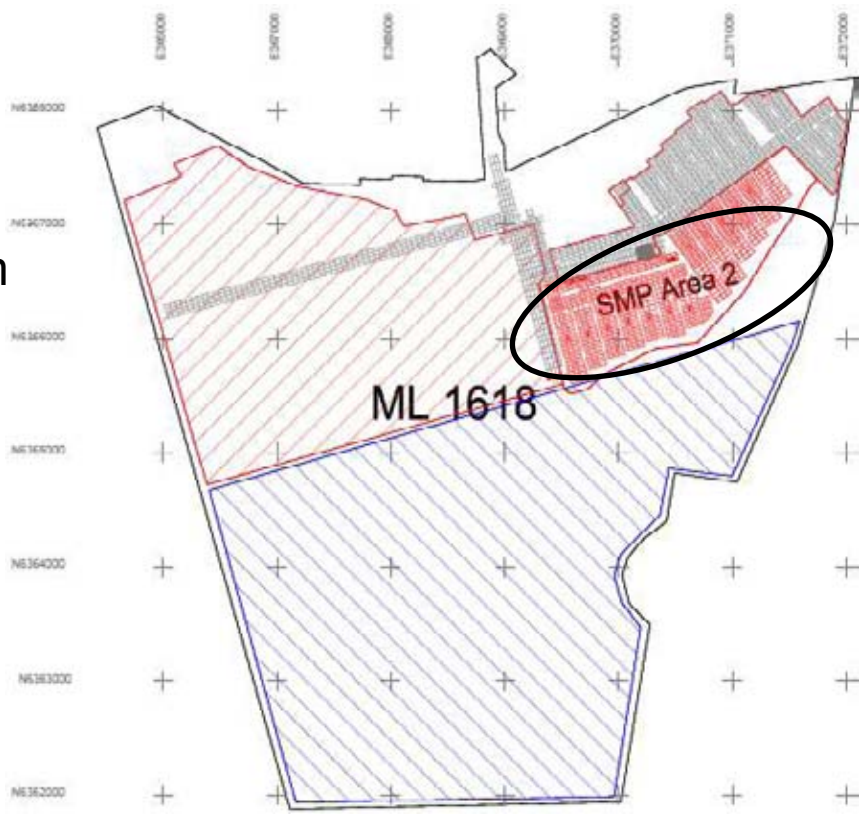
- Planning Focus November 2005
- EA lodged 2006
- Project approval granted June 2007
- Mining Lease ML1618 granted May 2008
- Abel commenced underground production from highwall in May 2008
- SMP Area 1 approved May 2010
- Pillar extraction production from Area 1 commenced July 2010
- SMP Area 2 = 221ha *(ML1618 area = 2,755ha*)
- Depth of cover in SMP 2 Area 95m to 150m
- Current workforce 200 including contractors
- 2010 planned ROM production 1.3mt.

Abel Mine SMP Area 2



Abel Mine Plan

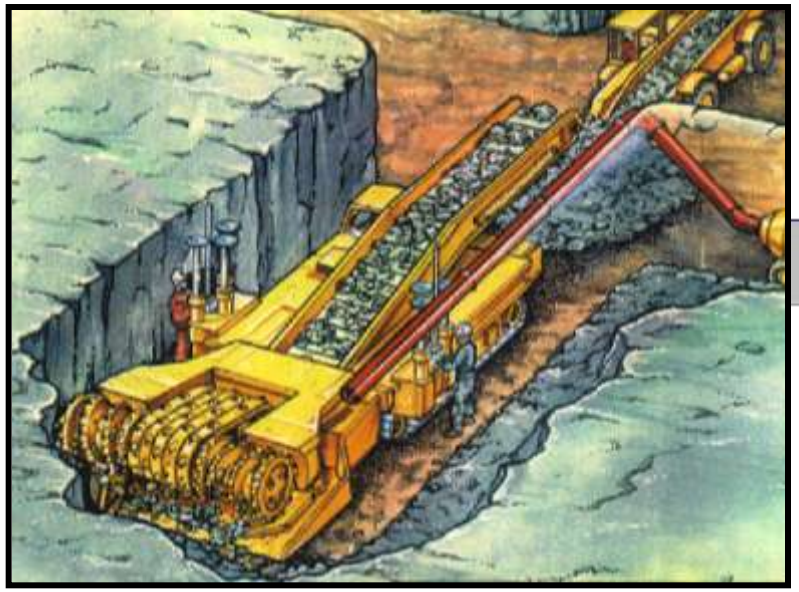
- Commenced coal production in May 2008 and will ramp up to 4.5mtpa and maintain that rate for >20yrs
- Target seams are the Upper and Lower Donaldson which range in thickness from 1.9m to 2.6m
- Soft coking and thermal products from the Upper Donaldson. Thermal from the Lower Donaldson
- At full production of 4.5mtpa will employ >350 people
- ML1618 area = 2,755 ha
- SMP Area 2 = 221ha

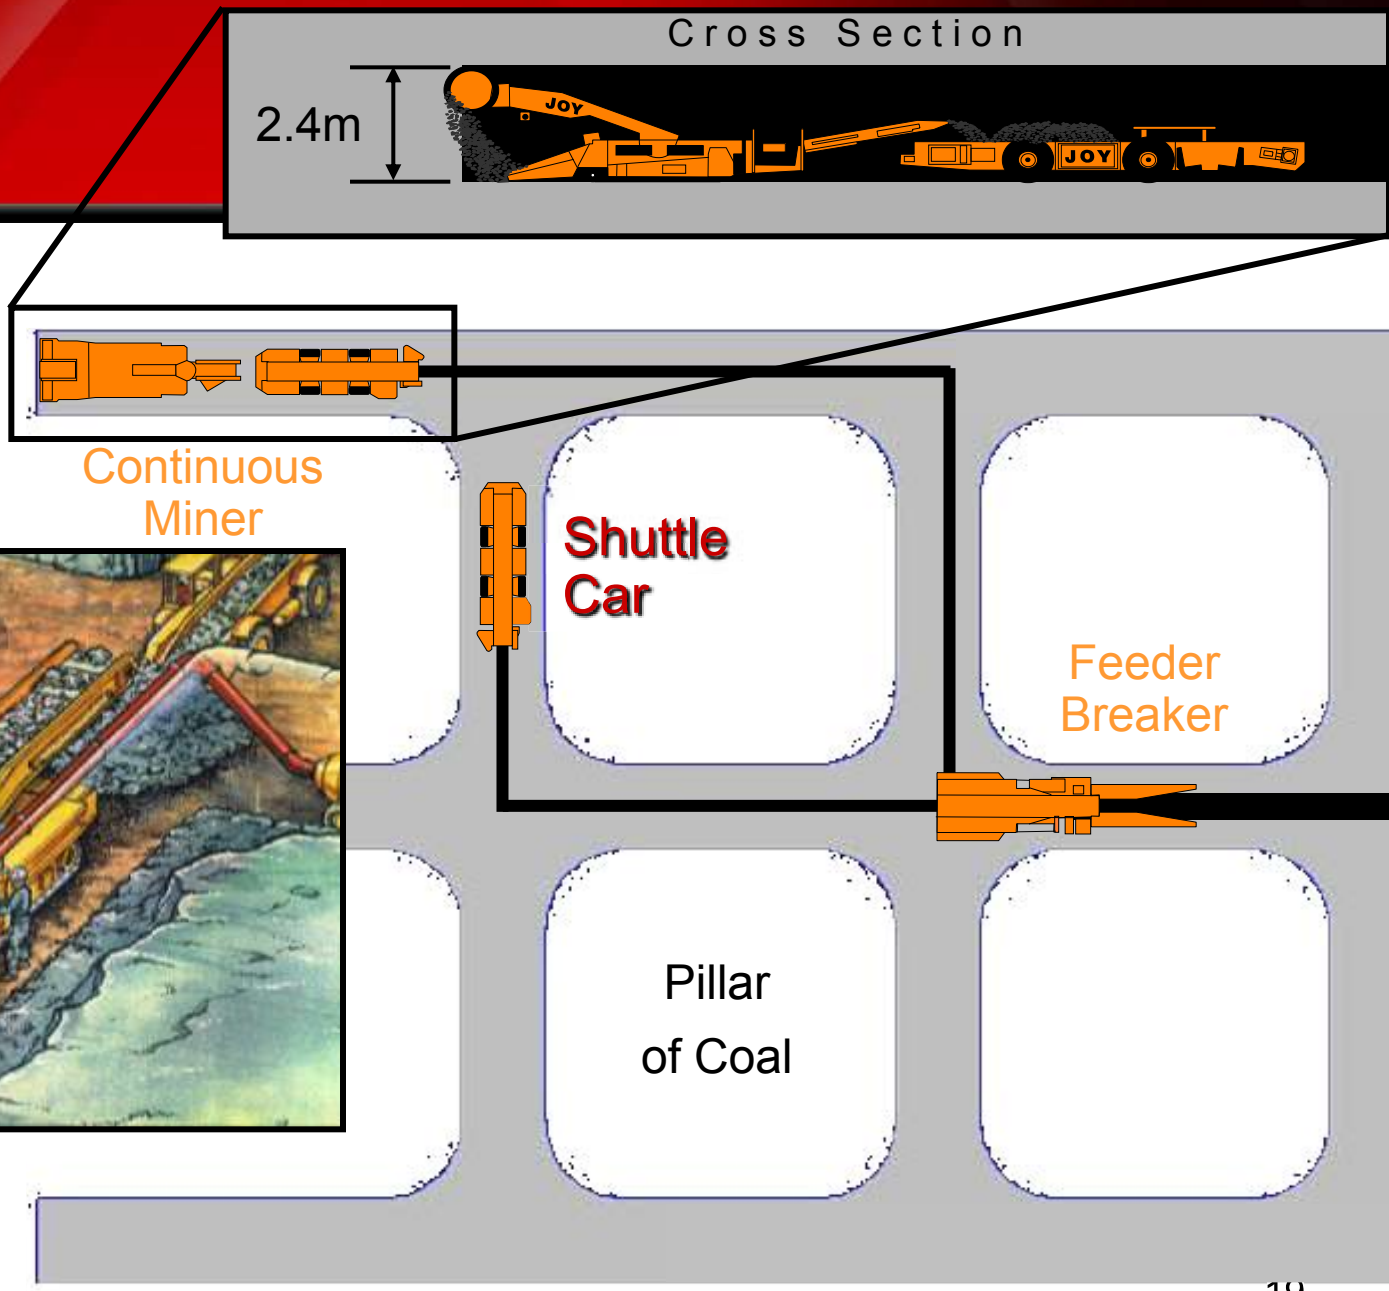


Upper Donaldson

Lower Donaldson

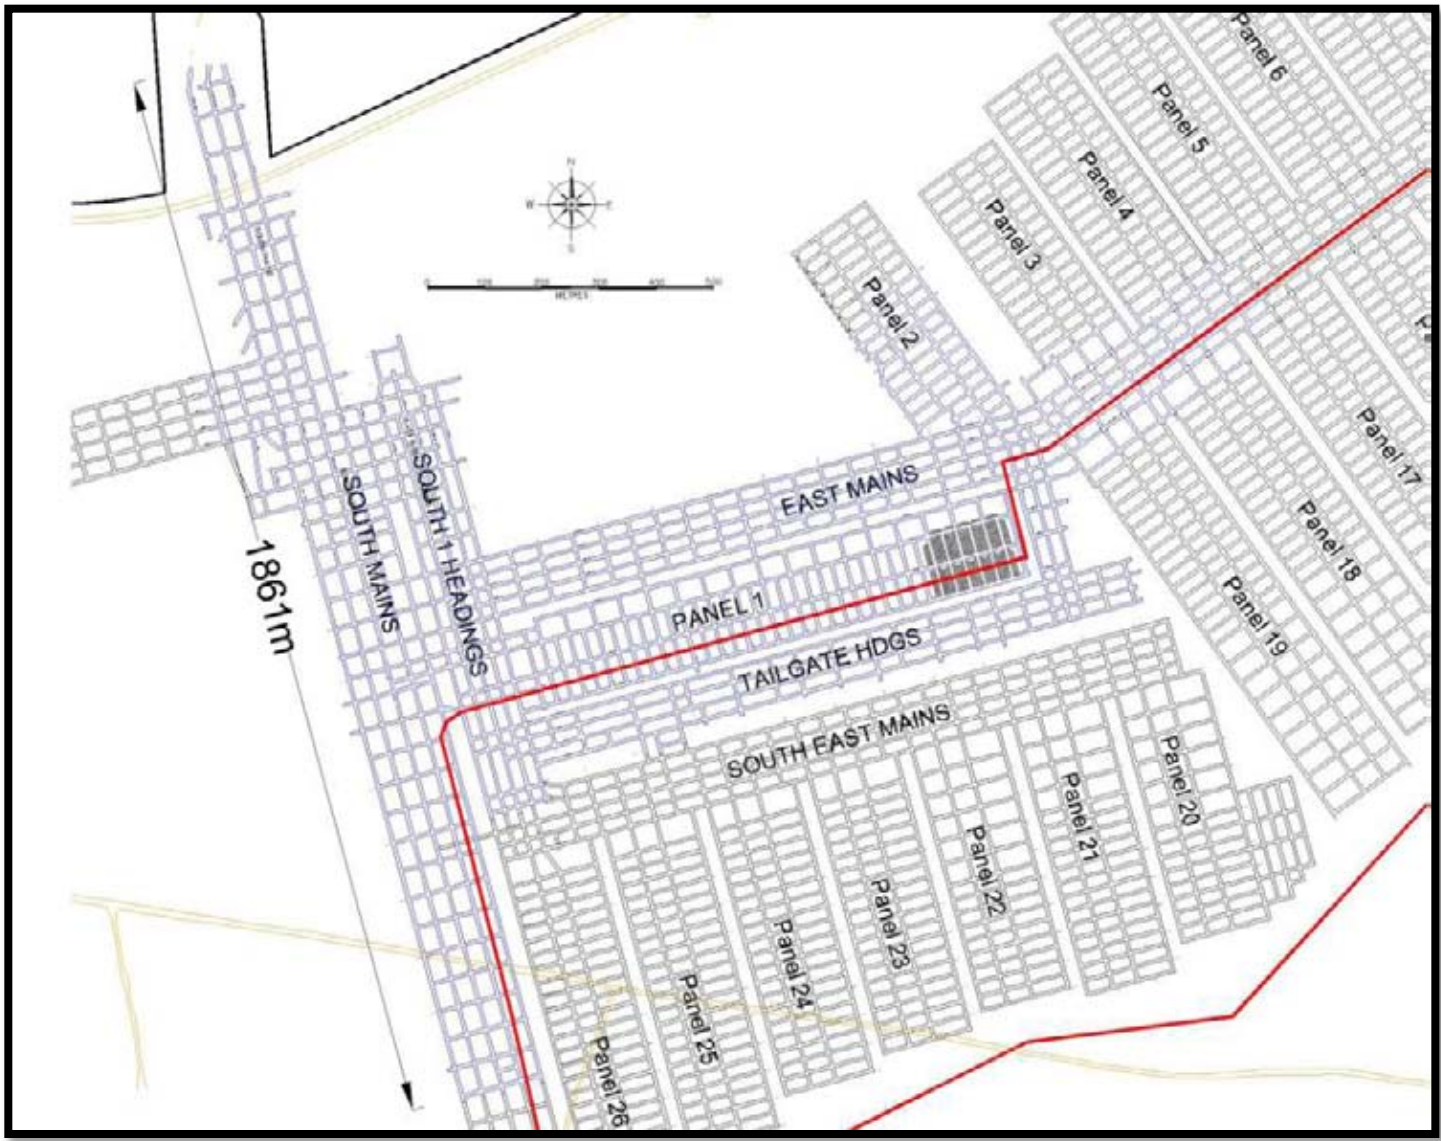
Bord & Pillar Mining





Abel Mine Plan

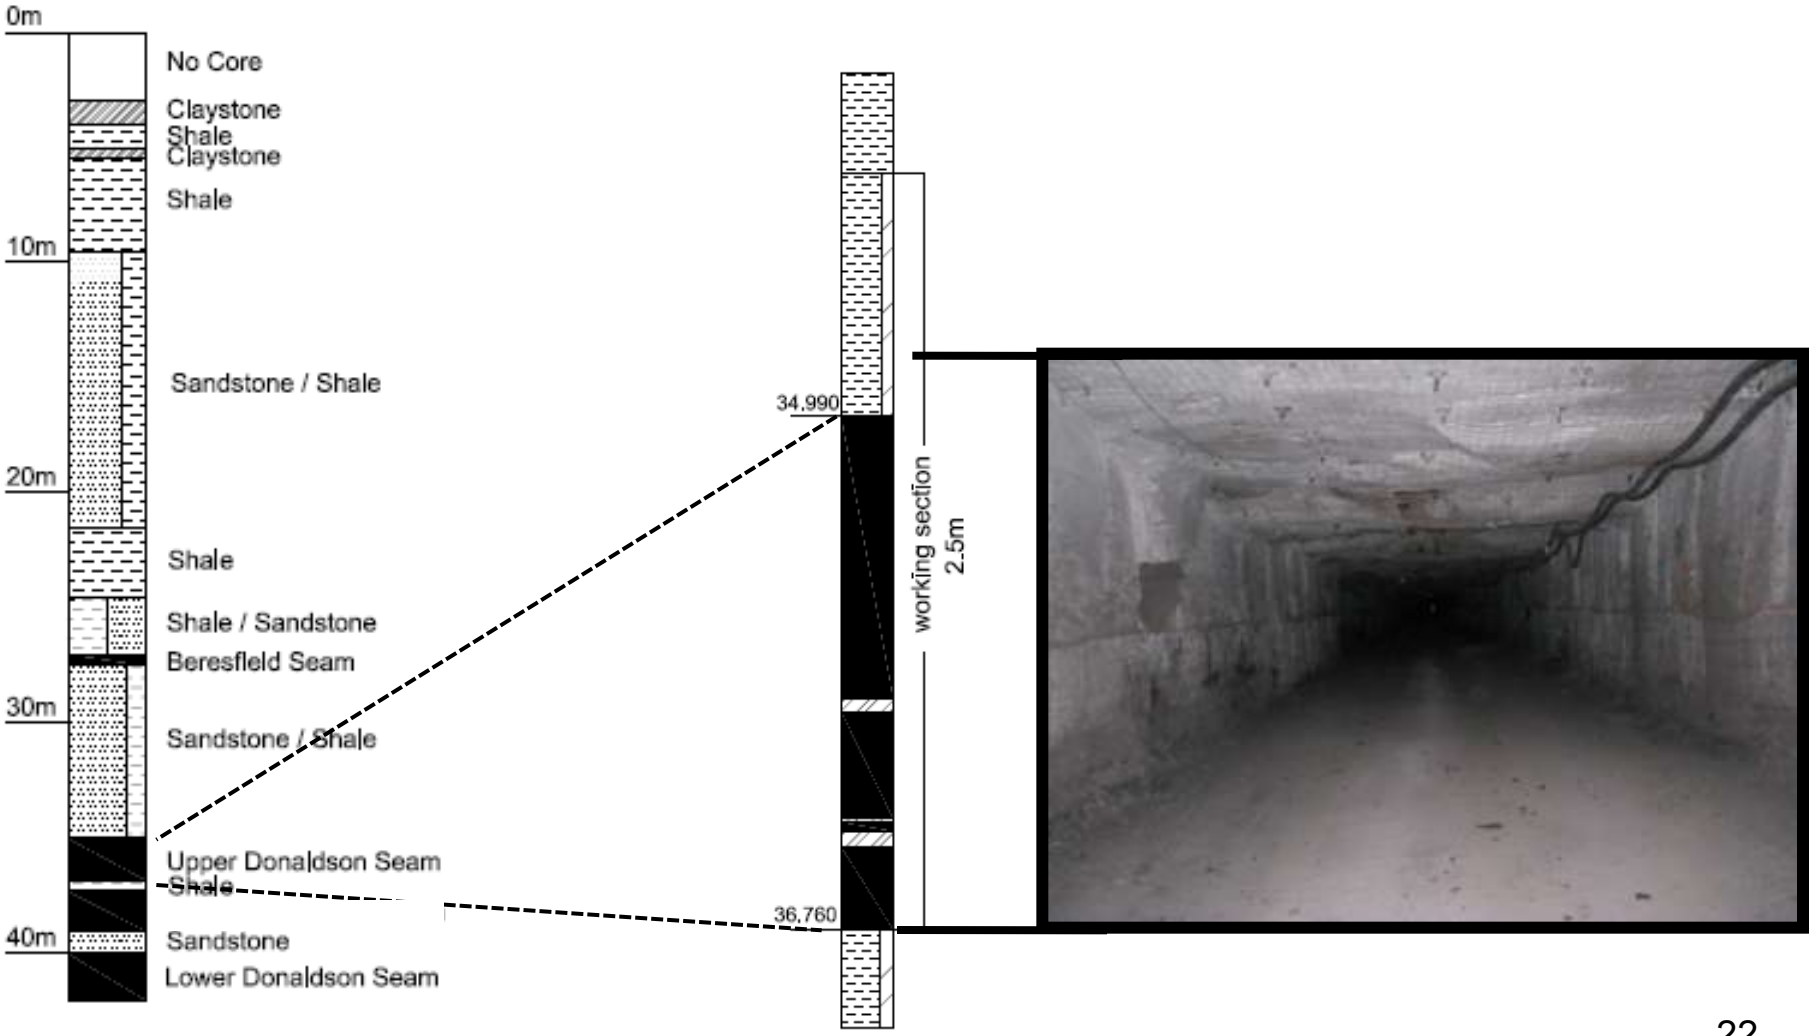
~ 40km of Development driveage completed to date
Current face areas up to 2km from Surface Portal



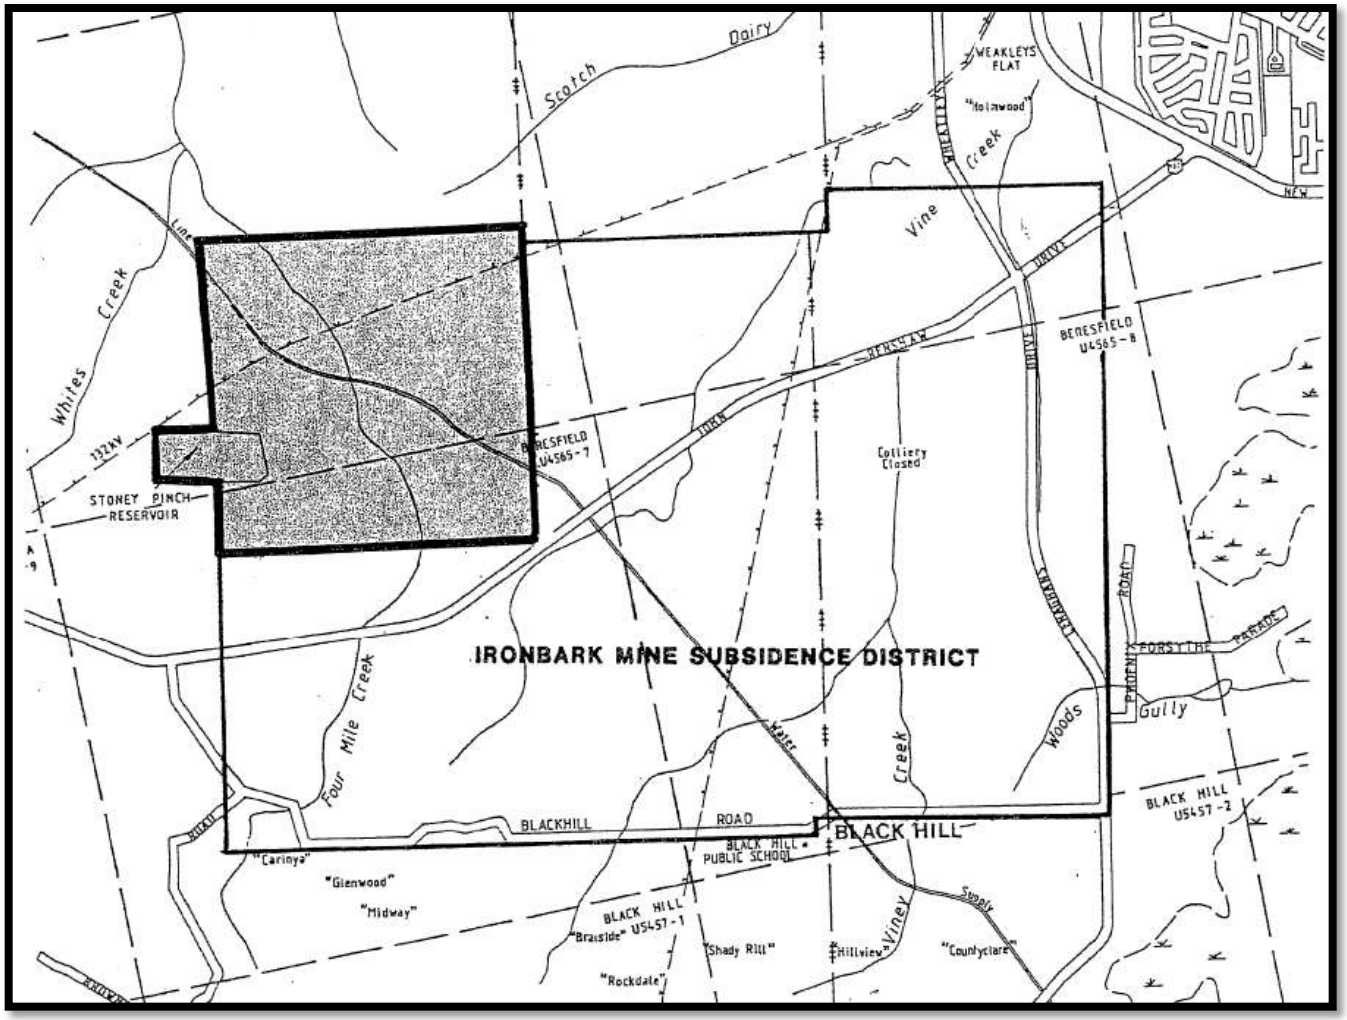
Mine Planning - Area 2

- Full extraction panels with the flexibility to retain long-term stable pillars for the protection of surface features
- Full extraction represents up to 85% reserve recovery within a mining panel
- Subsidence protection by either first workings or partial extraction
- No Pillar extraction below 50m depth of cover
- Panel width of 160m with appropriately designed barrier pillars

Typical Stratigraphic column (C086)



Historical Mine Subsidence District



Ironbark Subsidence District

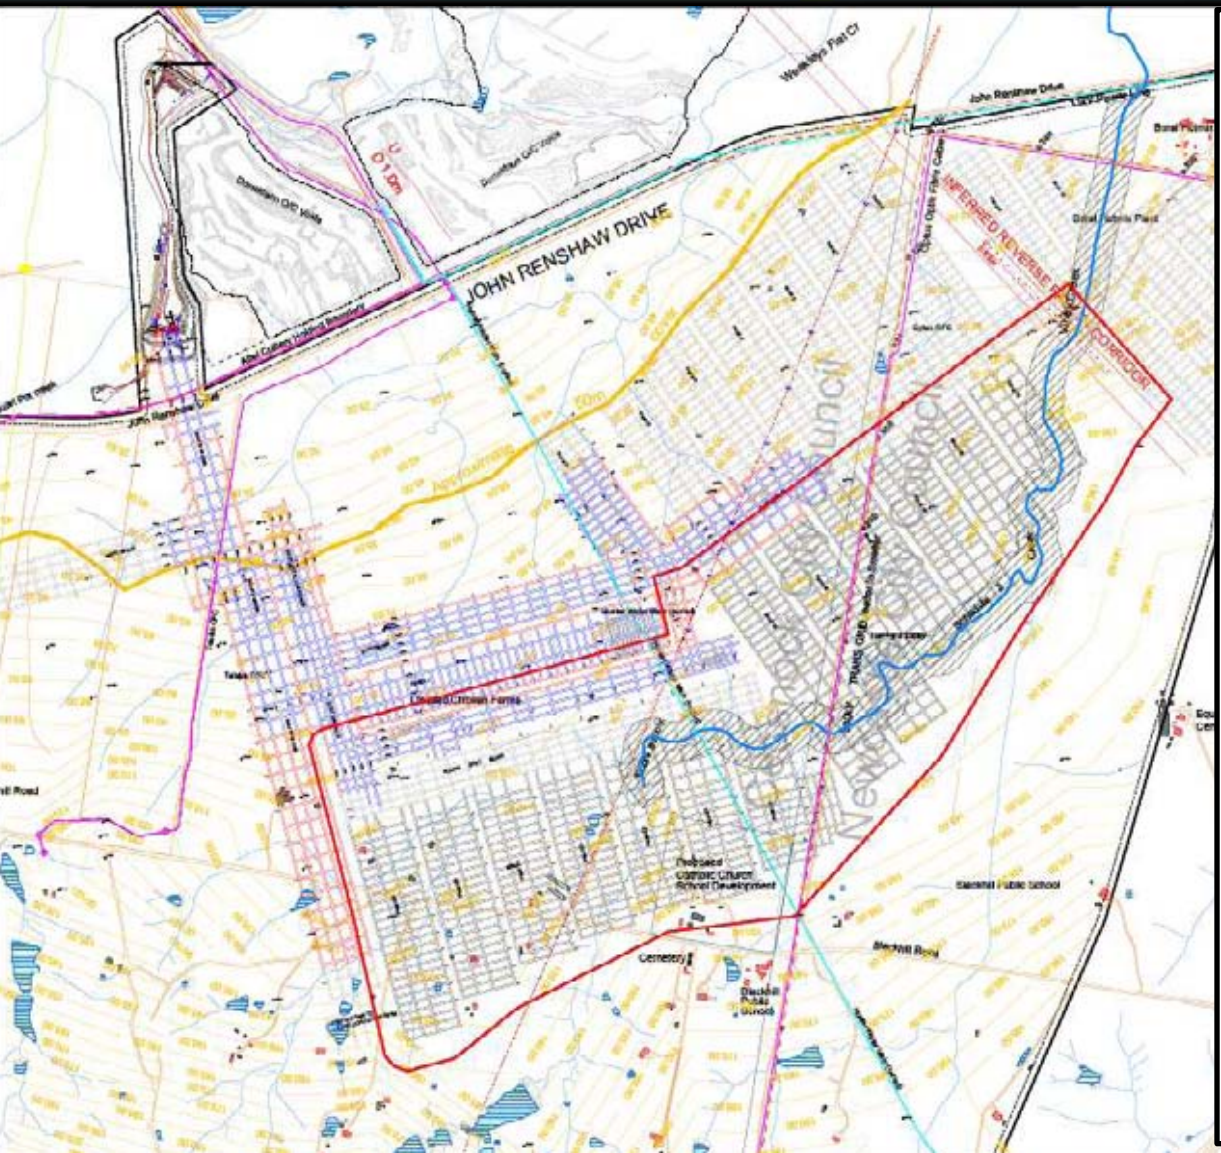
Initially gazetted in 1971

Extended in 1978

Revoked in 1994

New Subsidence District proposed for ML1618 area

SMP Application Area 2



Embraces 221ha

Contains 6.3m tonnes of insitu coal

Contains 3.7m tonnes of recoverable coal

Is divided into 13 Panels & 2 areas of Main Headings

Has an operating life of ~3 years

Project Approval condition- effective Subsidence to be completed by June 2013

Depth of cover ranges from 95m to 150m

Area to be re-classified as a Subsidence District by MSB

SMP Application Area 2

SMP Area 2 Panel tonnages

Total Tonnes	Length	Metres	development tonnes	extraction tonnes	Total
Panel 14	400	2,984	57,442	57,442	114,884

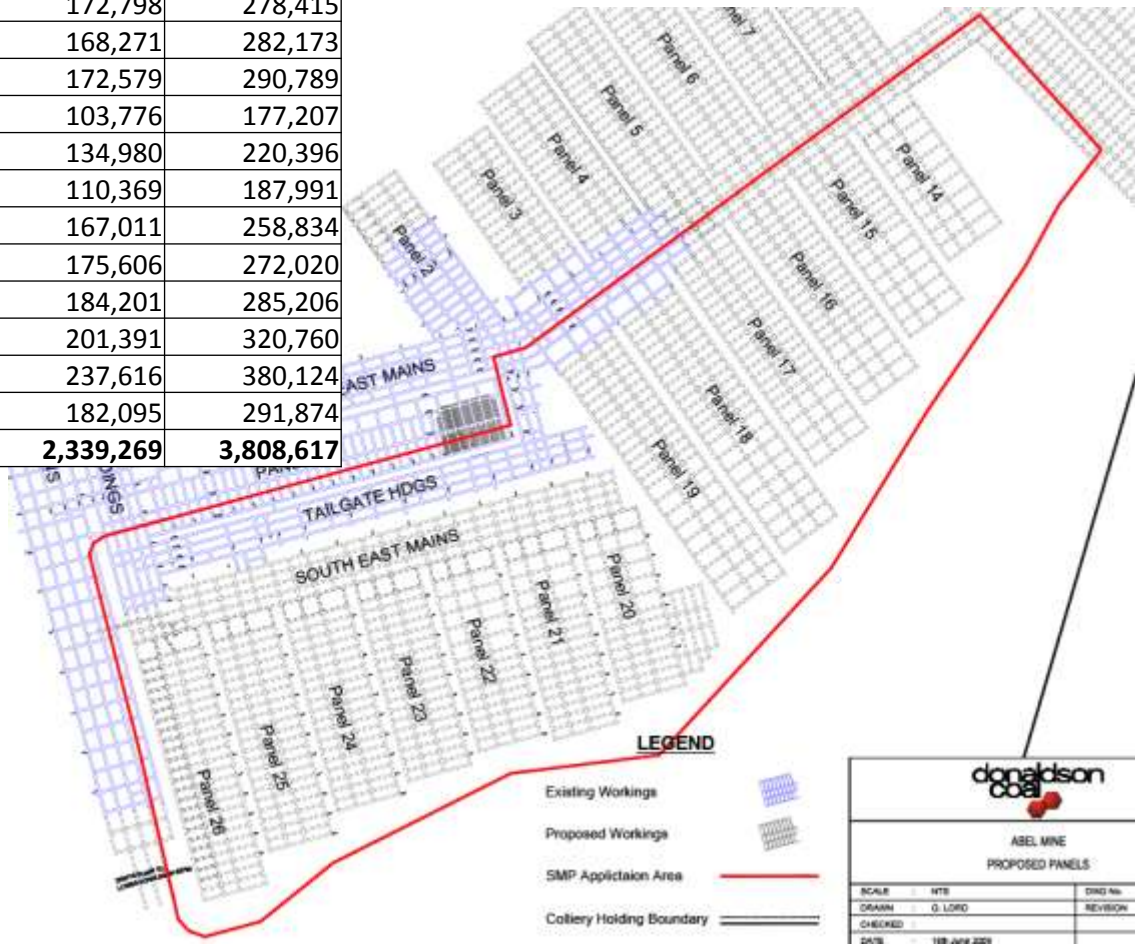
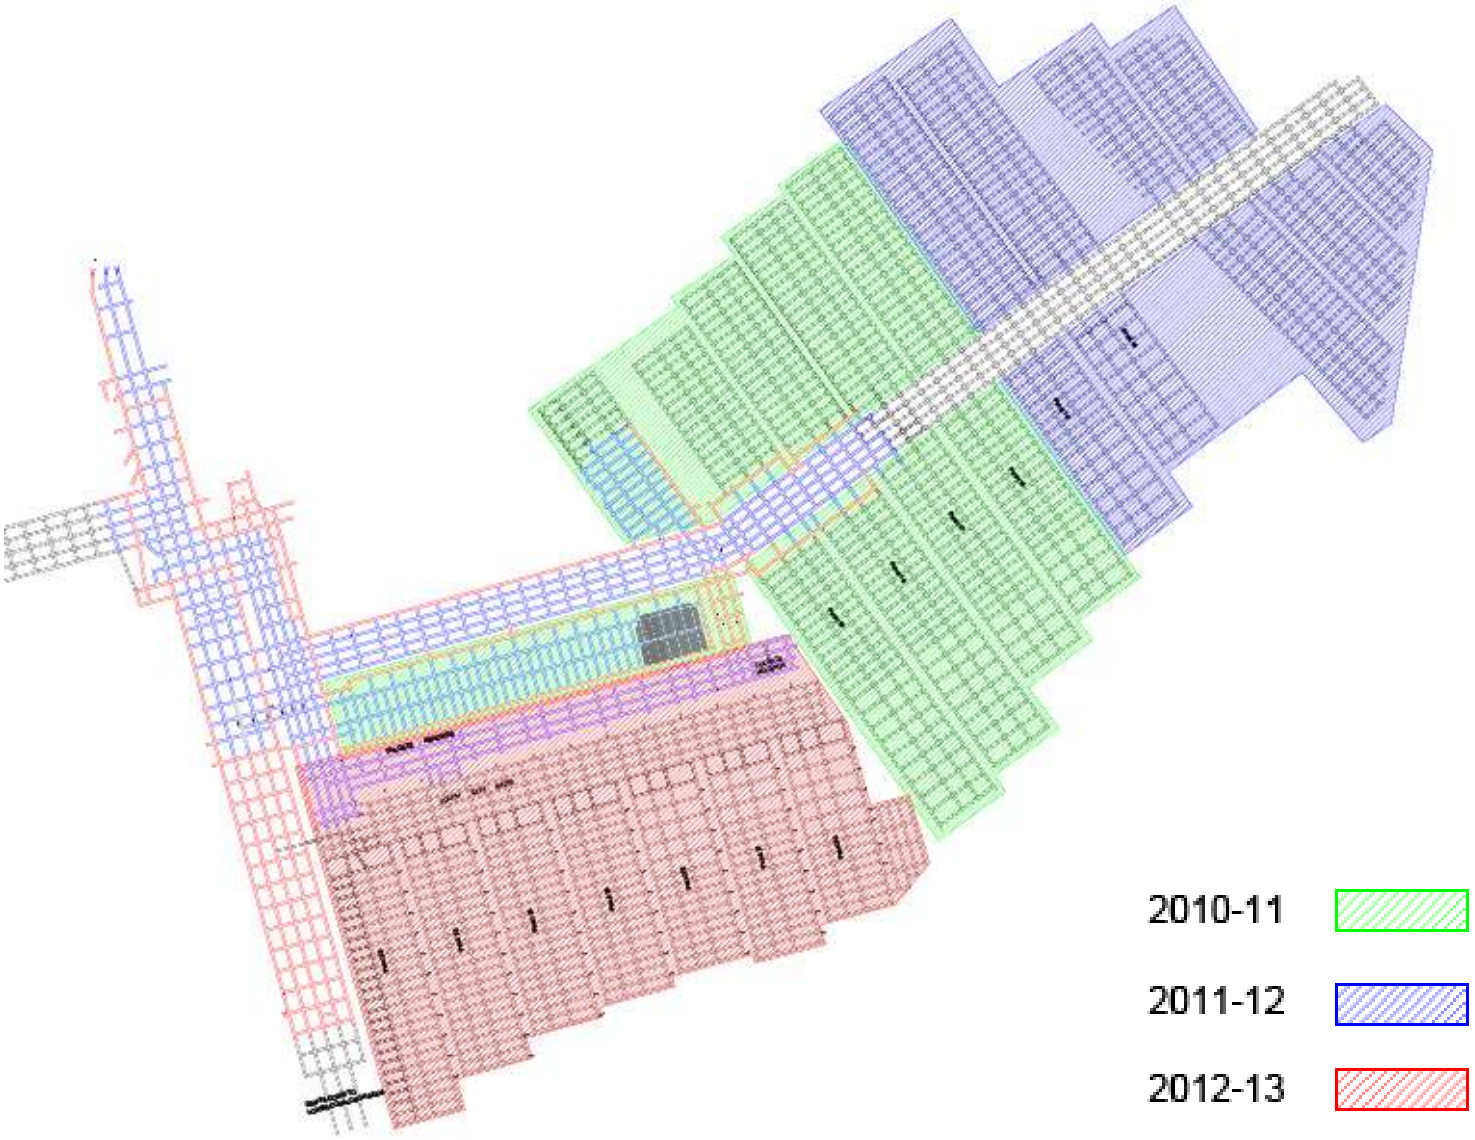
		76,330	**1,469,349**	**2,339,269**	**3,808,617**



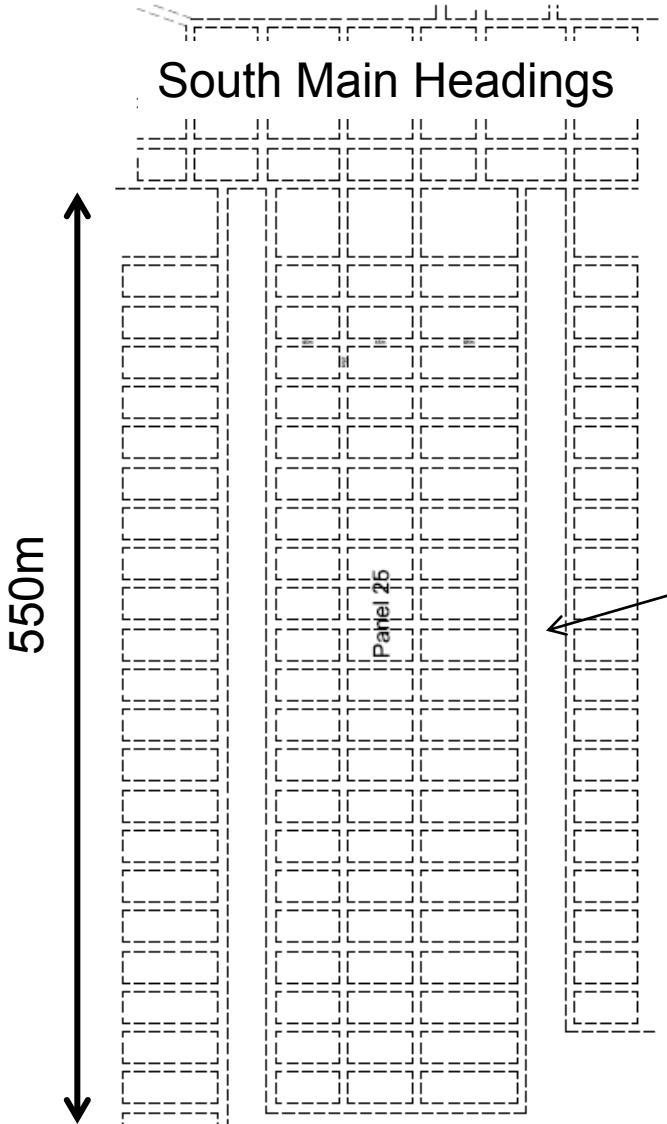
SMP Area 2 Schedule



Abel Mining Method

- Continuous miner based bord and pillar system
- Layout designed to minimise impact on sensitive surface areas while minimising resource sterilisation
- Panels 160m wide
  - 4 heading layout
- 1st workings (Roadway development)
  - Single Continuous Miner (CM) Unit (20-30m /shift)
  - Dual CM Unit (35- 45m/shift)
- 2nd workings (Pillar extraction)
  - 1,000 tonnes per shift
- 6 day rotating roster
- Depth of cover range 95m to 150m

Abel Typical Panel Layout - Panel 25



Panel 25	M Dev t Pillars	Time taken
1st workings	5,247m	~17 weeks
2nd workings	184,201t	~15 weeks
		~32 weeks

Barrier Pillar 24.5m

FIRST WORKINGS

- Roadways driven to form pillars. Development of main headings and panel roads to establish access to the coal in the Pillar Extraction panels.

Surface Environmental Assessment

- Surface inspections and surveys conducted to identify features as part of EA Process including
  - Flora/Fauna
  - Groundwater
  - Surface Water
  - Aboriginal & European heritage
- Monitoring programs as required by Project and SMP Approvals
- This information is reviewed and updated as part of each SMP Area submission
- Consultation with Landowners and Stakeholders

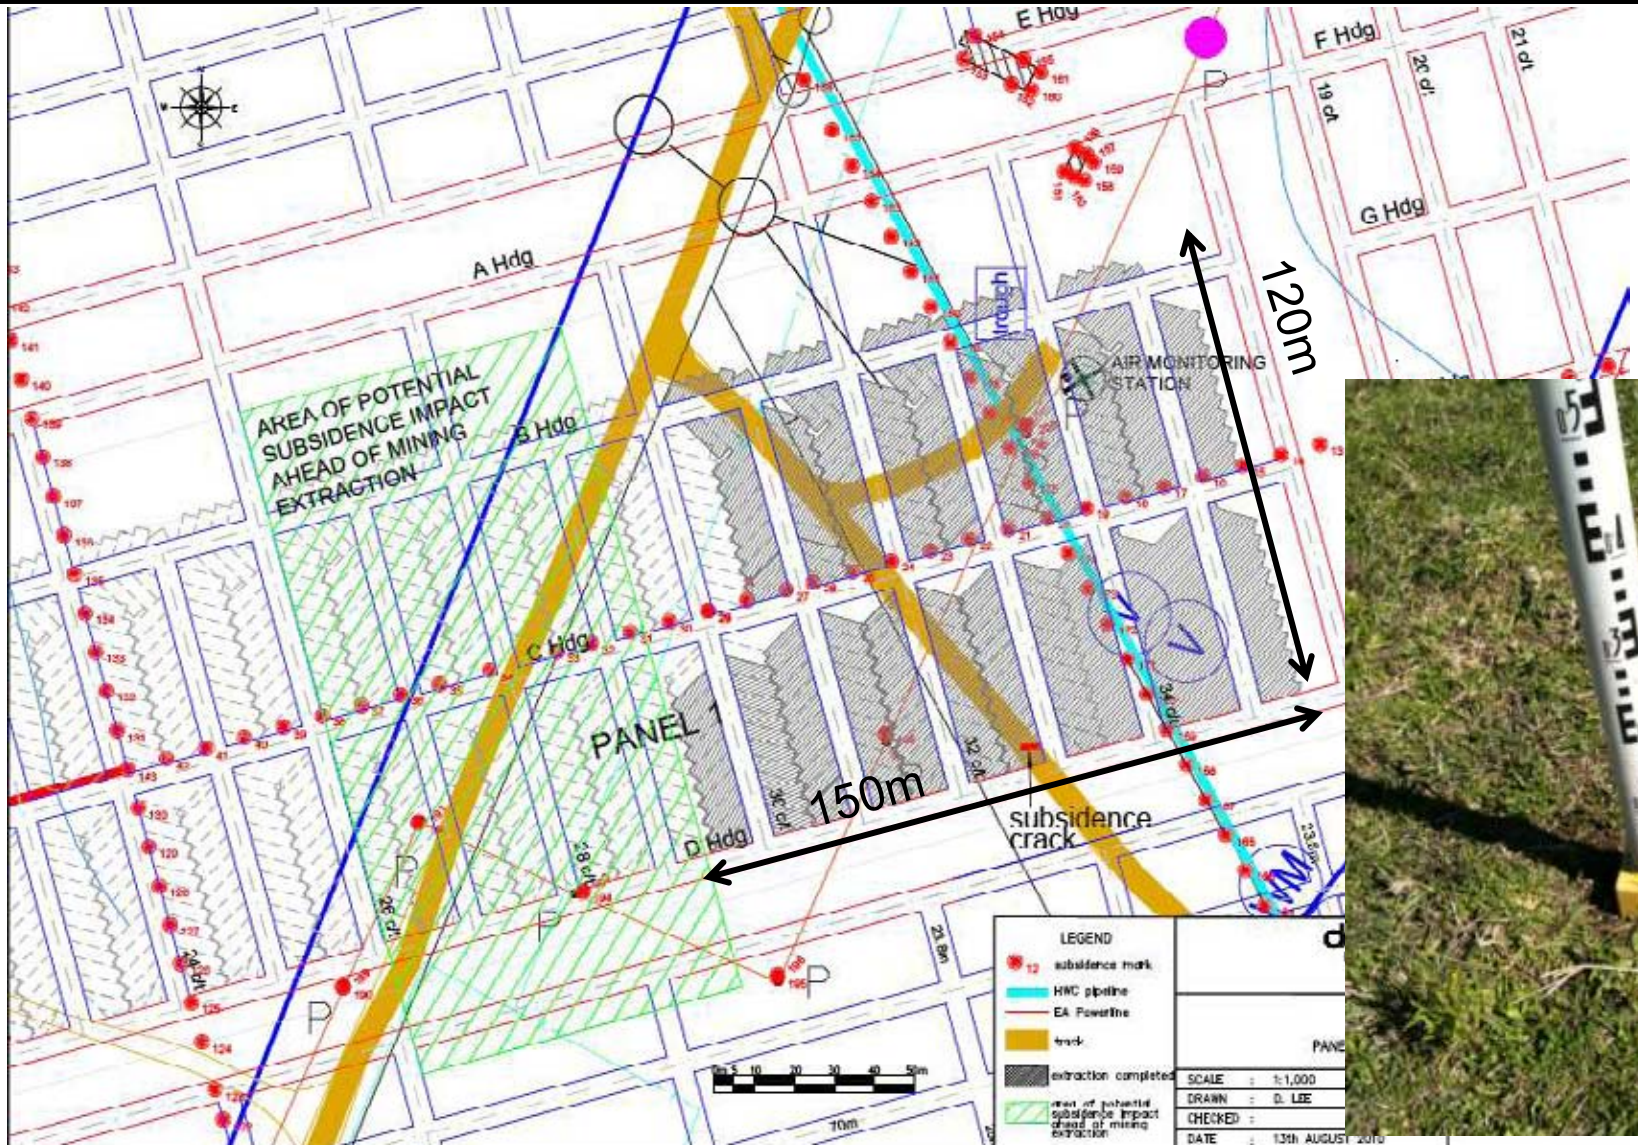
Area 1 Approval and Conditions, Management Plans, Monitoring Programs

- Approval for Abel Area 1 SMP was obtained on 26 May 2010;
- Minor variations have been approved to the layout of Panels 1 and 2 due to geological structures encountered
- Various Management Plans / Programs have been implemented,
  - Subsidence Monitoring Program;
  - Environmental Management Plan;
  - Public Safety Management Plan;
  - Infrastructure Management Plans for Hunter Water Corporation and Energy Australia;
  - Draft Transgrid Management Plan; and
  - Draft Property Management Plans for both the Catholic Diocese and Black Hill Land P/L land.

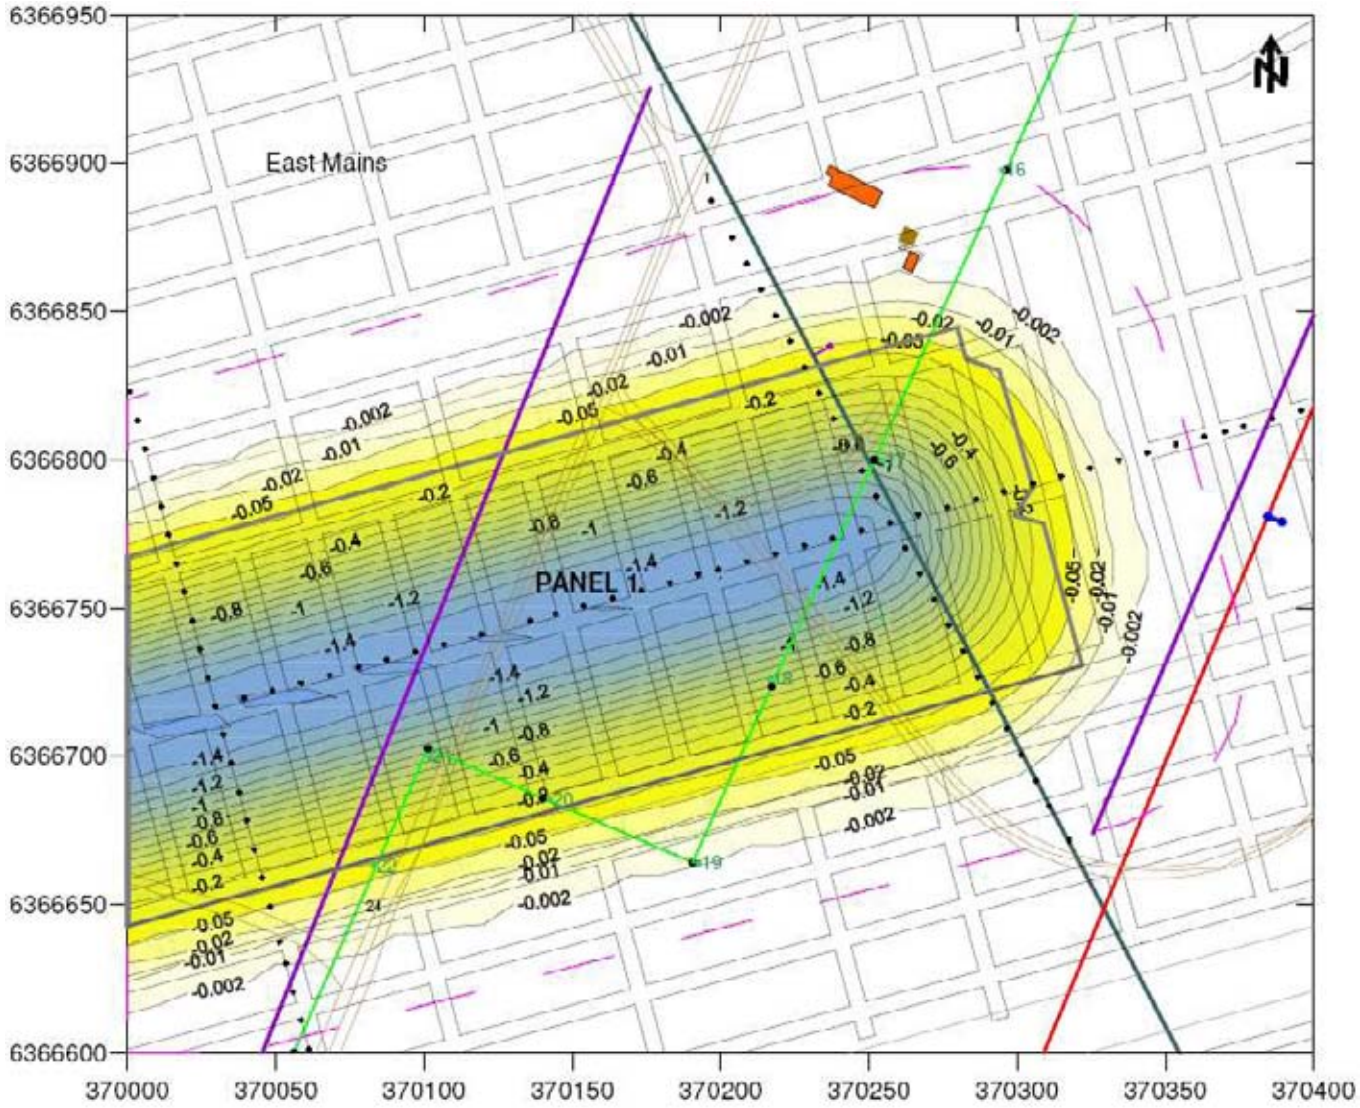
Panel 1 progress to date

- Commenced 12 July 2010
- Has retreated 150m
- Panel 2 to commence next week

Panel 1 Mining Notification to Landholder



Panel 1 subsidence predictions



Subsidence Results Panel 1, Impacts and Remediation

Monitoring

Panel	Monitoring Item	SMP Prediction For 156m wide Panel	Actual Survey Measurements to date For 120m wide Panel
Panel 1	Subsidence	1.58 to 1.76m	1.10m (incomplete)
	Strain	10-15mm/m	10-11mm/m
	Tilt	38-53mm/m	47mm/m

Some further minor subsidence increase is anticipated as extraction of the Panel progresses

Impacts

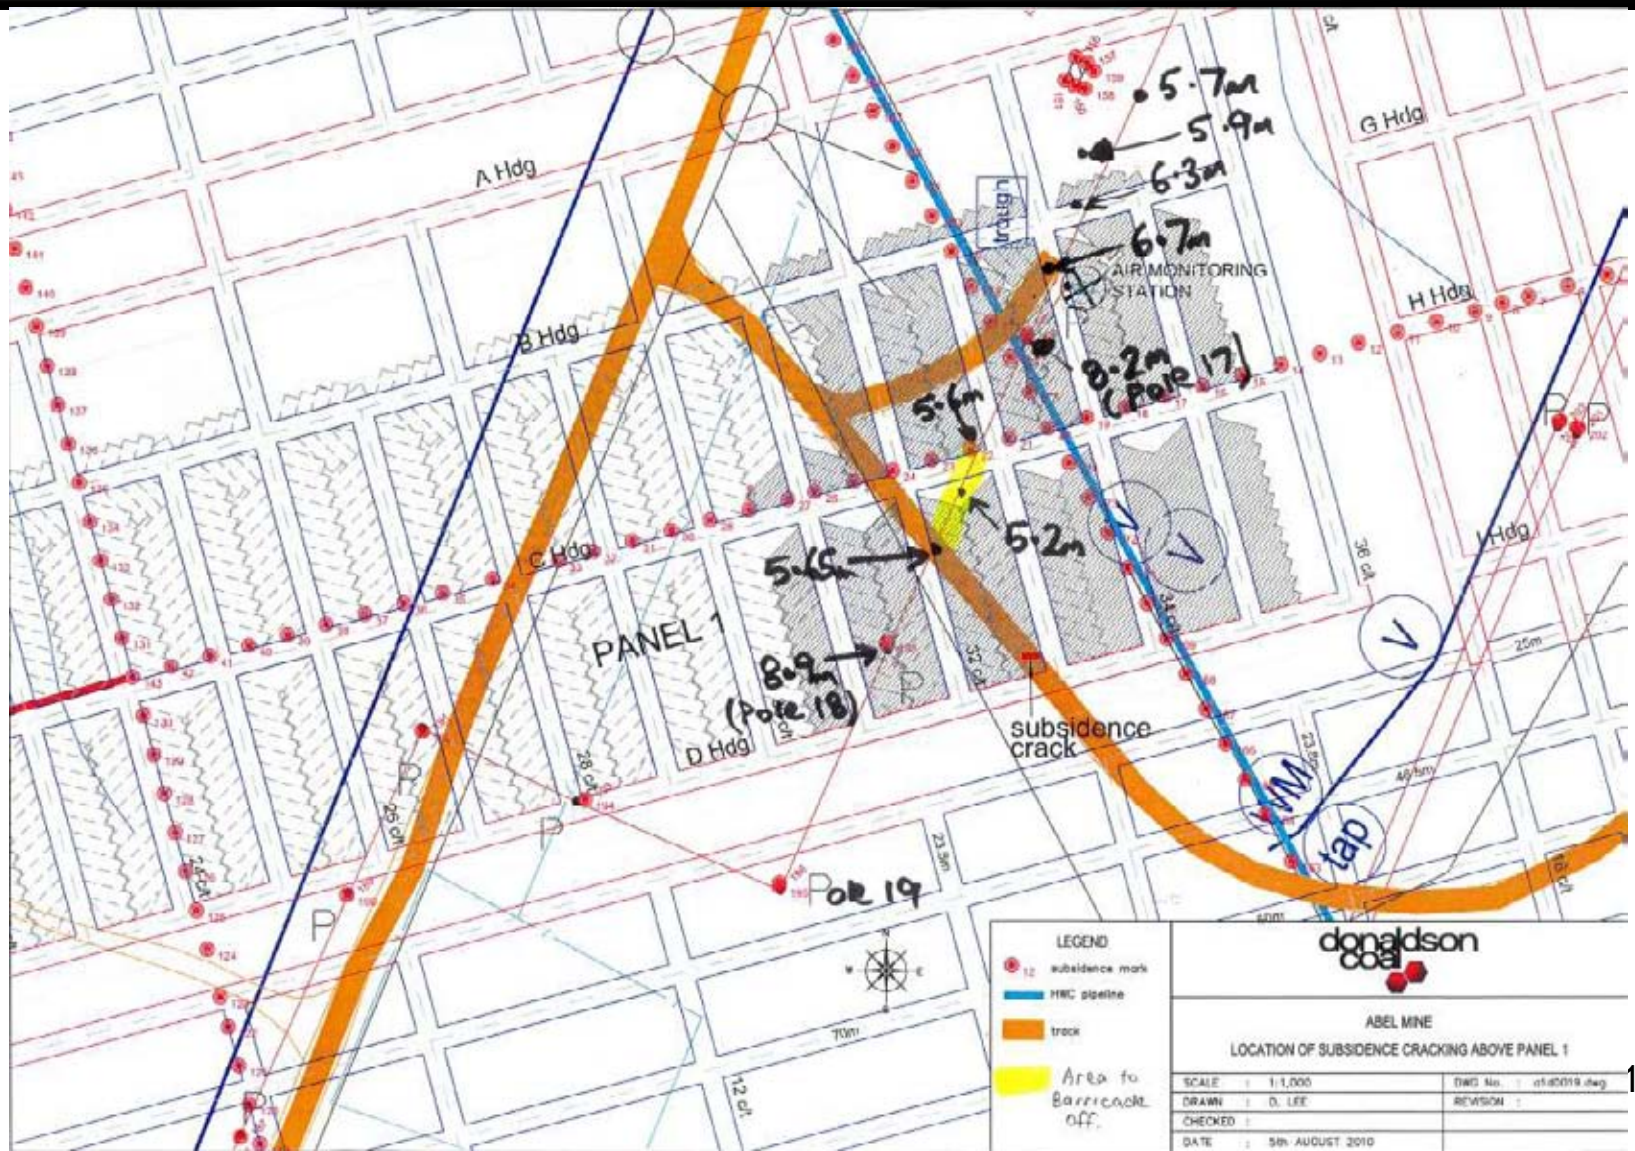
Panel	Impacts	SMP Prediction For 156m wide Panel	Actual Impacts to date For 120m wide Panel
Panel 1	Surface cracking	100-150mm	180-200mm across road only (remediated)
	Water Line (HWC)	Potential to be assessed by HWC	Minor crack on fitting fed from the HWC 200mm line (remediated in accordance with HWC MP)
	Power Line (EA)	Potential for clearance loss was identified	Clearance loss on EA 415V line was observed and EA notified (remediated in accordance with EAMP)

Subsidence cracking on access track

Subsidence cracking on access track

415V Conductor Clearance

415V Conductor Clearance



415V conductor lifting

11kV Power pole repairs

Cracking on fitting HWC Water Line

- No Damage to 200mm Line, however leak resulting from cracking of disused copper connection to old 375mm Water Line

Subsidence Prediction Methodology

Several industry established empirical models were used to predict the maximum subsidence impact parameters and profiles for the given mining layouts. The predictions involved the following work:

(i) The development of a geotechnical model for the study area.

(ii) Review of Stage 1 results to date.

(iii) Prediction of maximum panel and barrier pillar subsidence and profiles using the DgS Modified **ACARP, 2003** subsidence model.

(iv) Subsidence, tilt, strain, horizontal displacement contours using **SDPS®** 3-D influence function software.

(v) Post-mining topography, potential cracking width, ponding location and surface gradient change contours were estimated using **Surfer8®** contouring software.

(vi) Estimation of sub-surface fracturing heights above the panels using empirically based models in **ACARP, 2003, Forster, 1995** and **Mark, 2007**.

Subsidence Prediction Outcomes

For the 125 m to 160 m wide panels with mining heights of 2.4 to 3.7 m and cover depths of 95m to 150m, the predicted key subsidence impact parameters include:

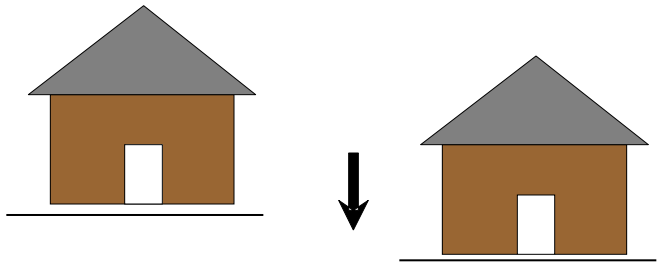
- Final maximum panel subsidence between 42% and 51% of the mining height e.g. 1.0m to 1.90m.
- Final barrier pillar subsidence from 0.04 m to 0.21 m
- Maximum possible surface cracking widths of between 50 mm and 200 mm and tapering to depths of 5 to 10 m (likely to be mitigated by surface clays/weathered shales). Most cracks likely to be 'self healing' or may not develop at surface at all.
- No cracking or ponding expected along Viney Creek, due to buffer zone.
- Engineered solutions required for man-made features.

Subsidence Impact Parameters

- vertical subsidence (m)

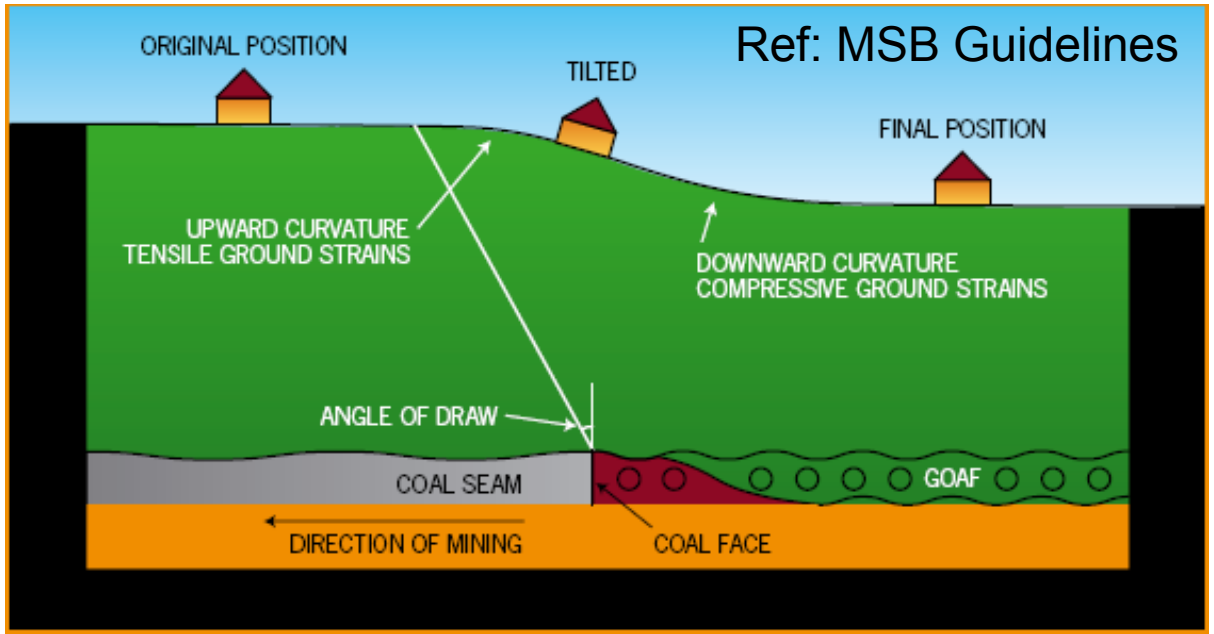
  rarely a direct concern, except when adjacent to water bodies

  or flat terrain with watercourses (i.e. ponding)



Final maximum panel subsidence ranges from 1.0m to 1.9m for the given mining geometries.

SCZs will limit subsidence to <20mm



Subsidence Impact Parameters

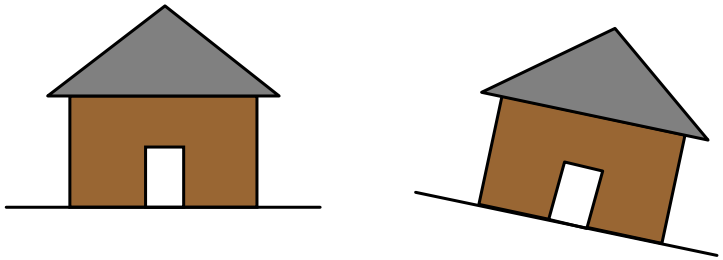
- Tilt (mm/m)

differential subsidence

does not commonly cause

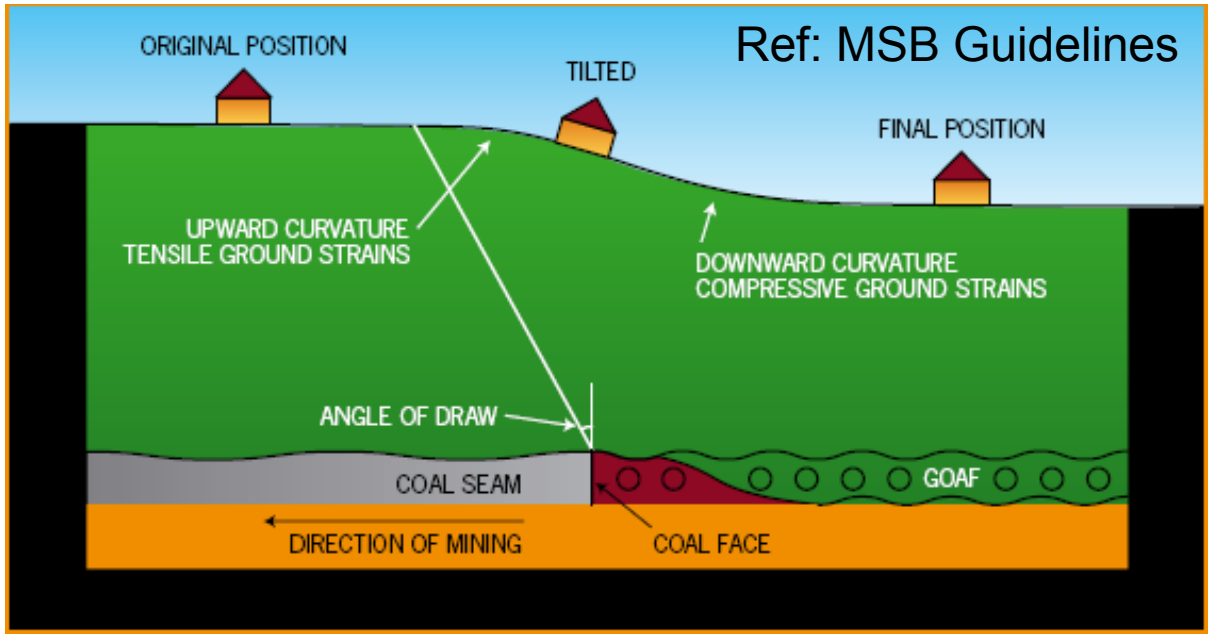
structural damage

affects structure usage, drainage



Final maximum panel tilt ranges from 10 to 48 mm/m (30 mm/m typical).

Houses impacted by tilts > 7 mm/m.



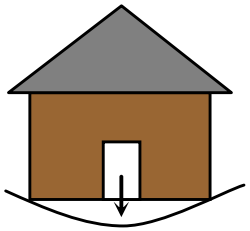
Subsidence Impact Parameters

- Curvature (bending)

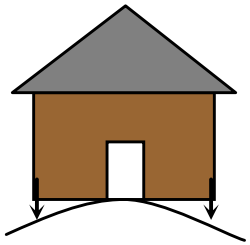
  differential tilt (1/km)

  major damage driver

  structures deformed and can crack, shear or buckle



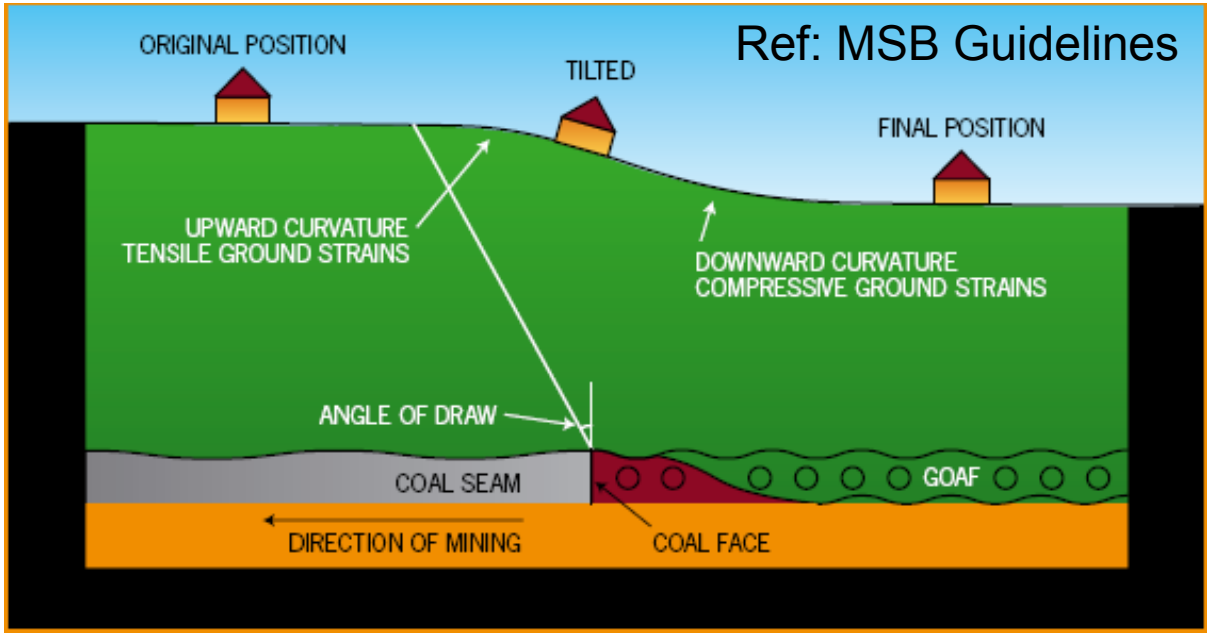
sagging



hogging

Final maximum panel hogging and sagging curvature ranges from 0.5 to 1.9 1/km or bending radii of 2 km to 0.5 km.

Houses can crack between 2 to 10 km radii.

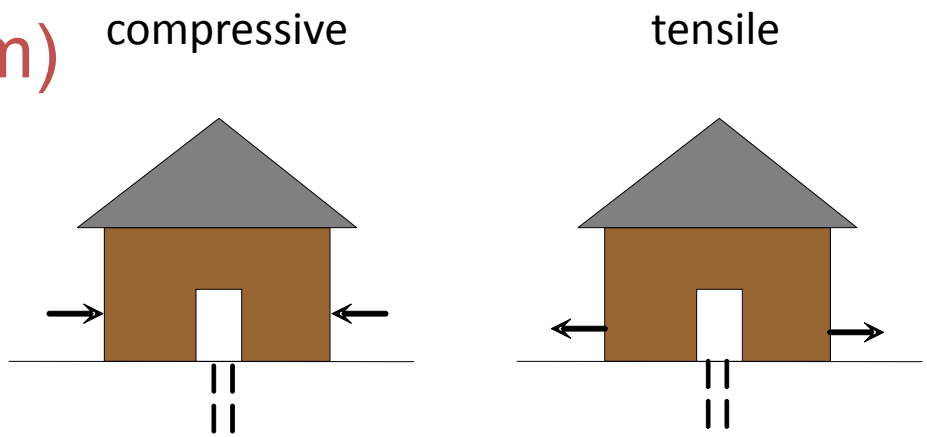


Subsidence Impact Parameters

- horizontal strain (mm/m)

tensile or compressive

associated with curvature and has similar damage outcomes



Final maximum panel tensile and compressive strain ranges from 5 to 20 mm/m (10 mm/m typical) .

Houses can crack > 3 mm/m

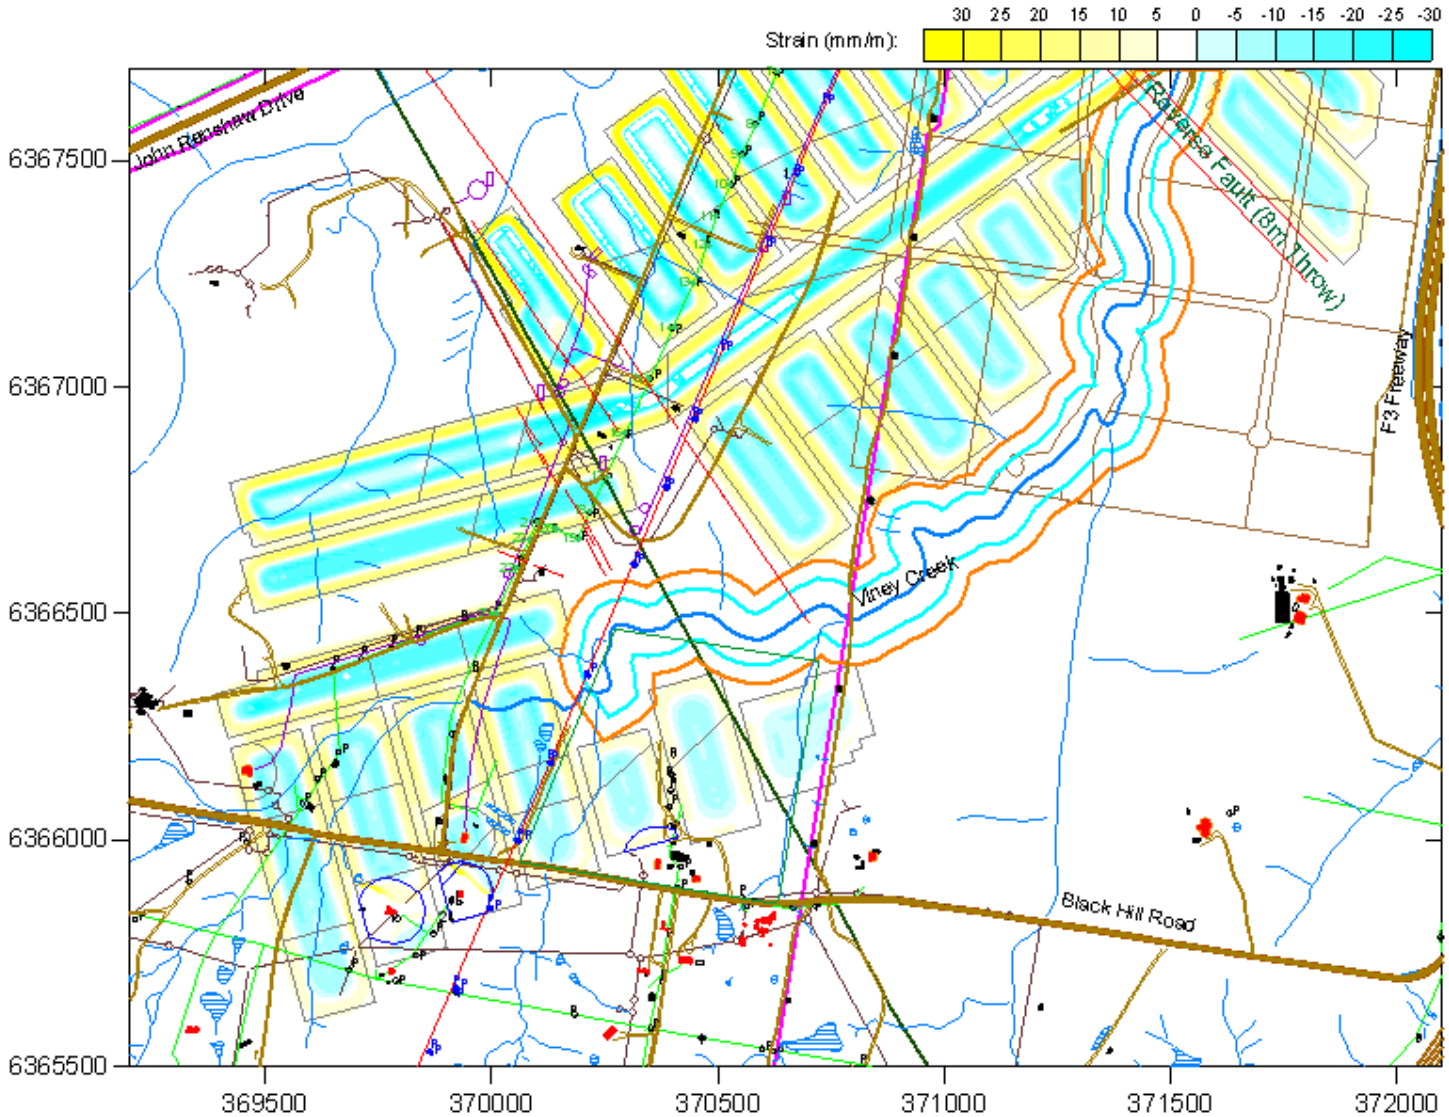
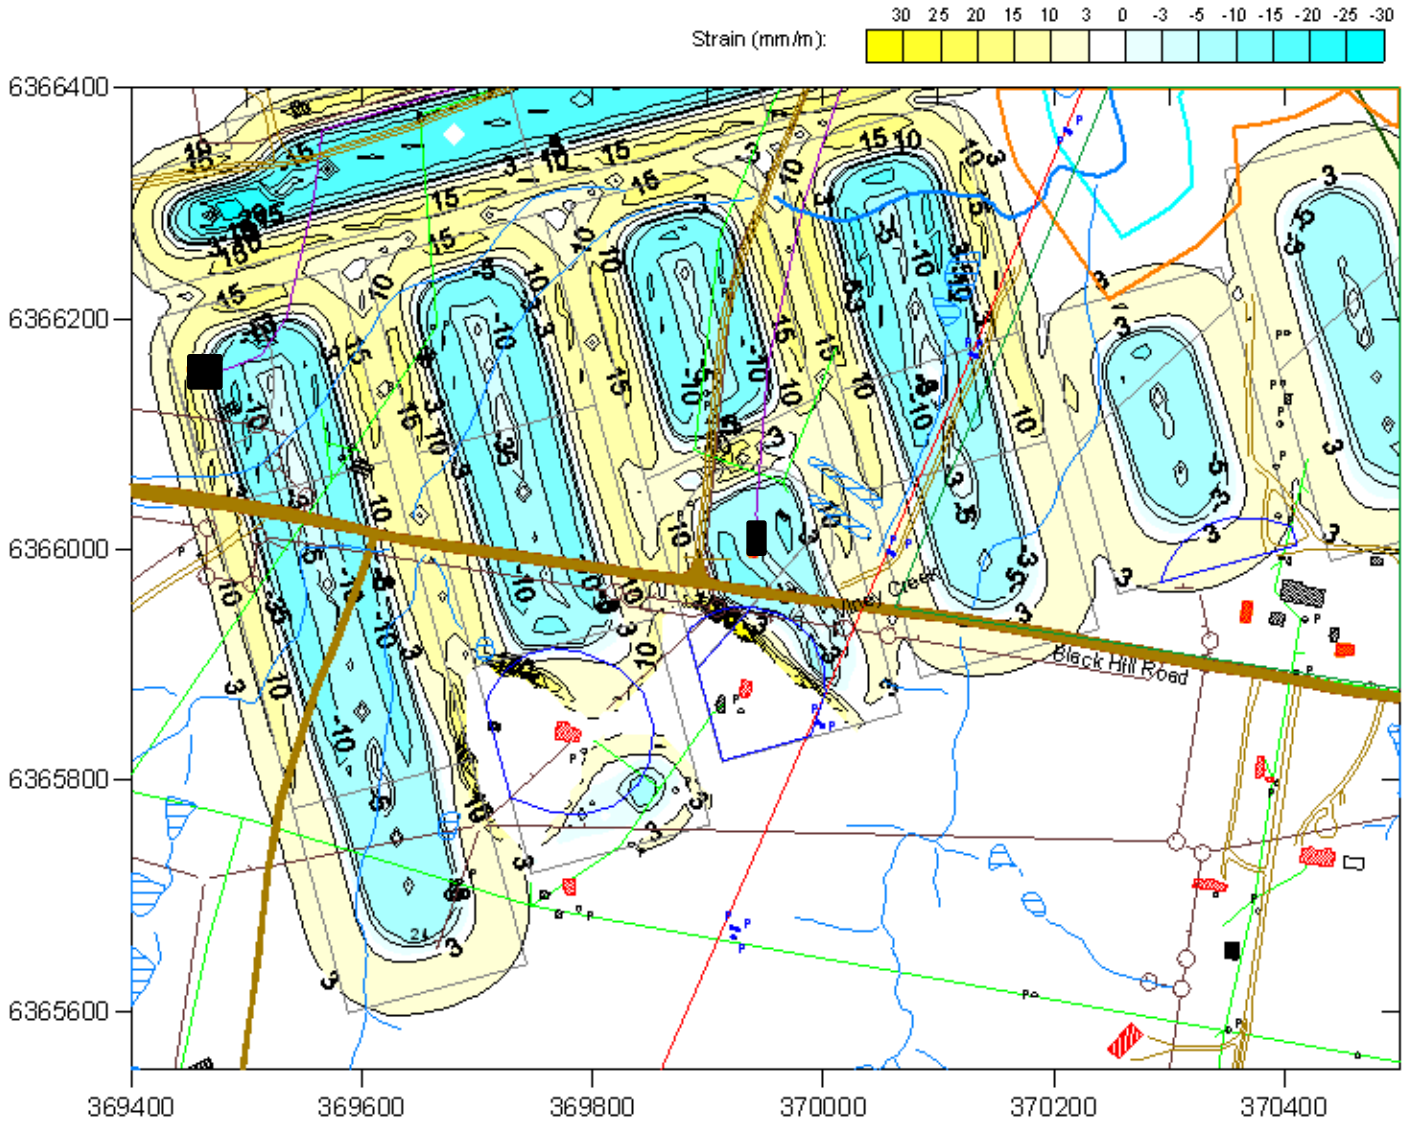
Prediction Outcomes: Strain



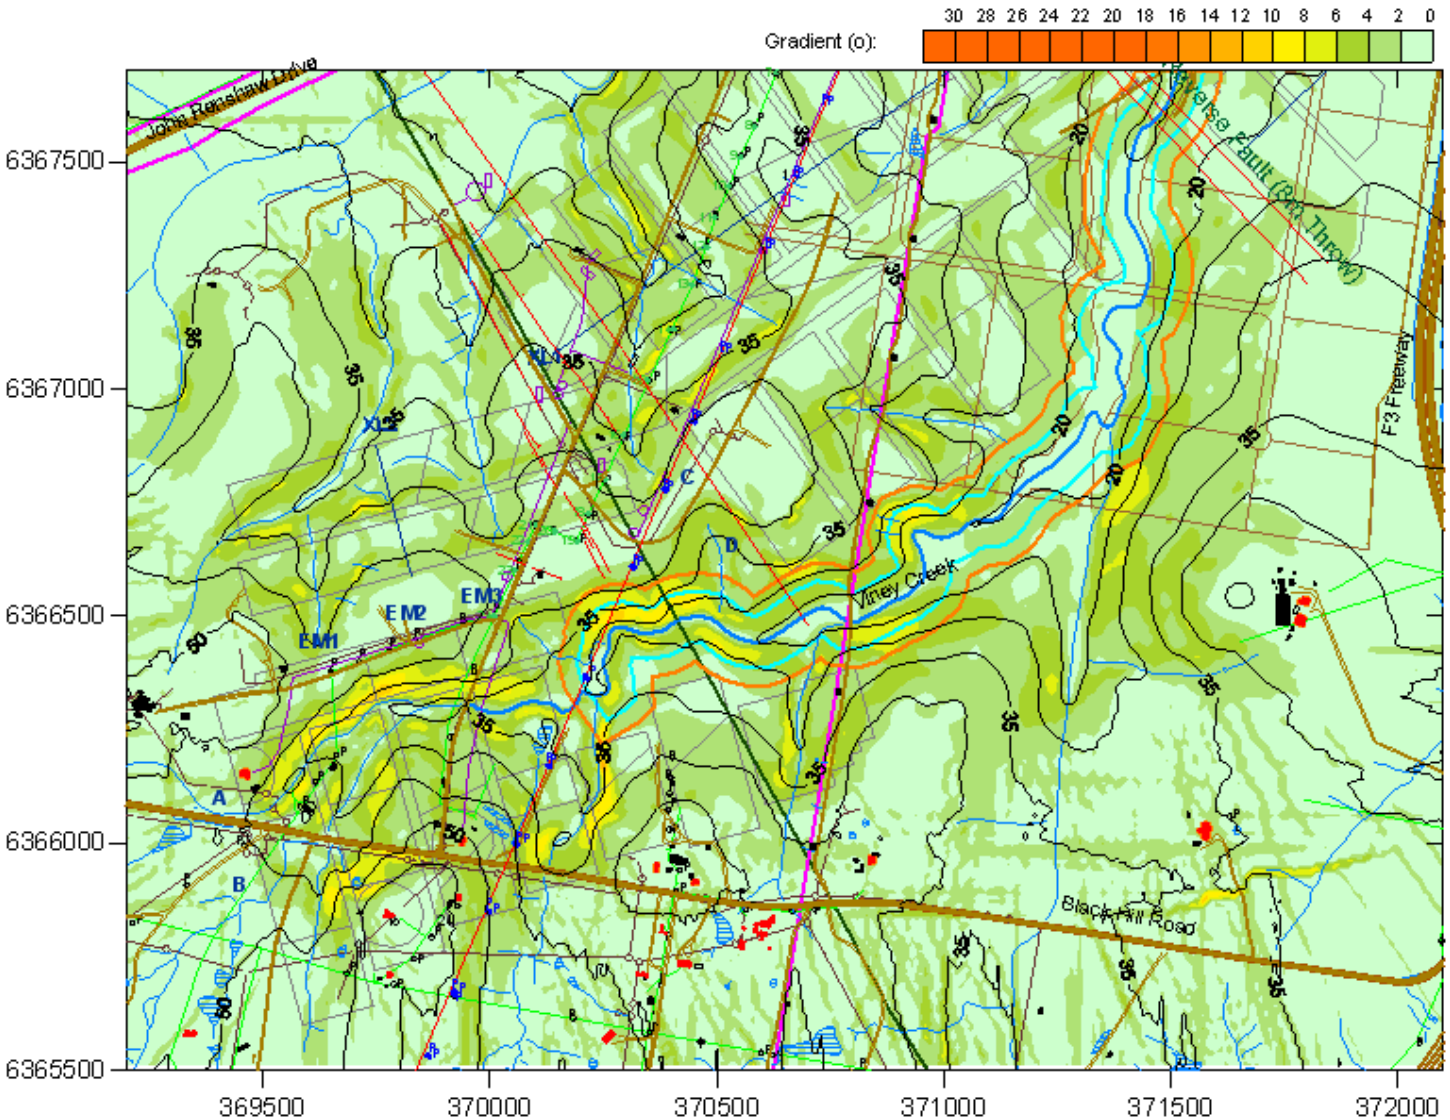
Subsidence Control Zone

Predicted Strain at Principle Residences



Subsidence Control Zone

Prediction Outcomes: Surface Gradients



Sub Surface Fracturing Assessment

- The **ACARP, 2003** model predicts that heights of continuous sub-surface fracturing for the proposed mining heights are > 10 m below the surface for cover depths >100m.

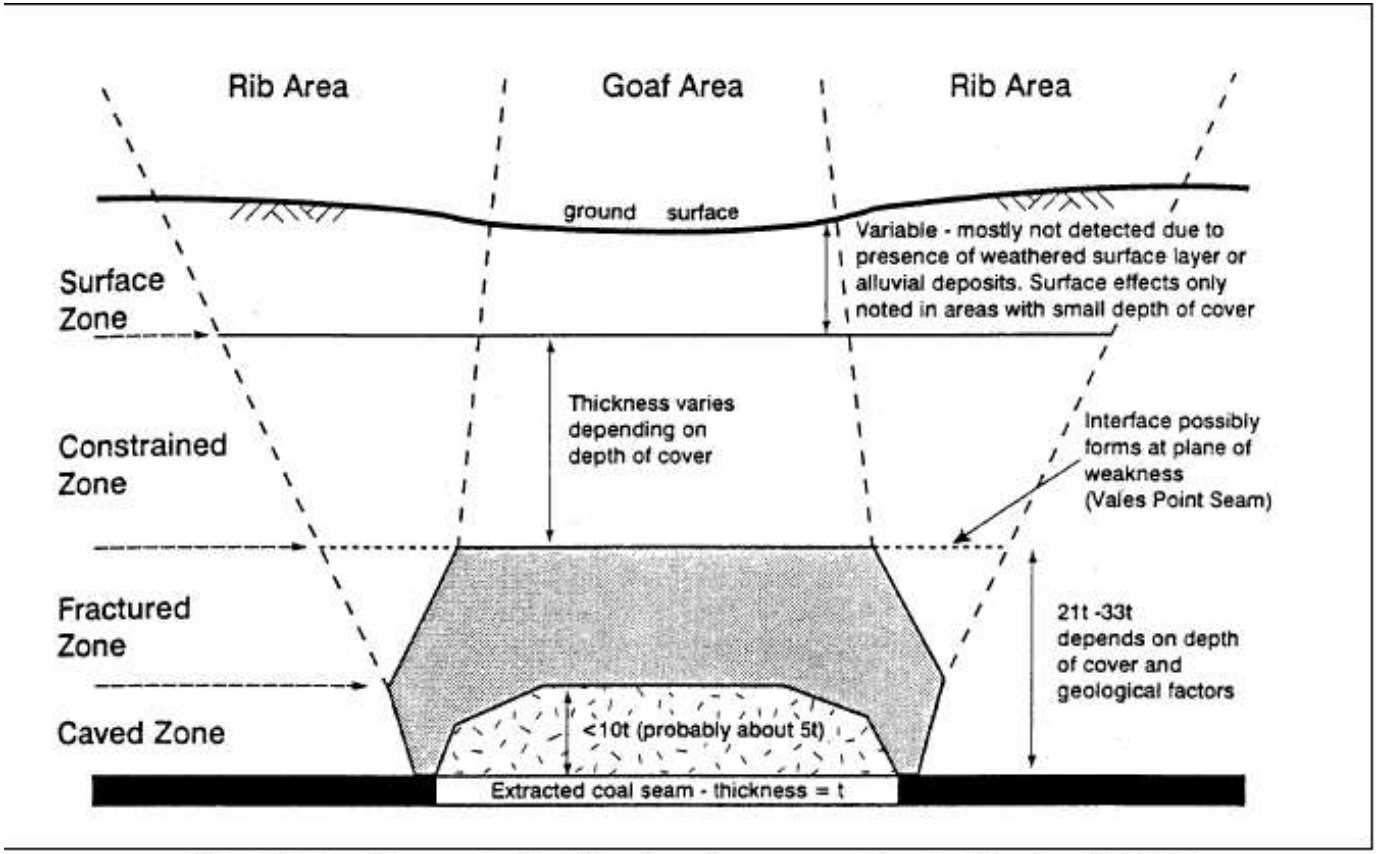


Fig. 1.33 Zones in the Overburden according to Forster (1995)

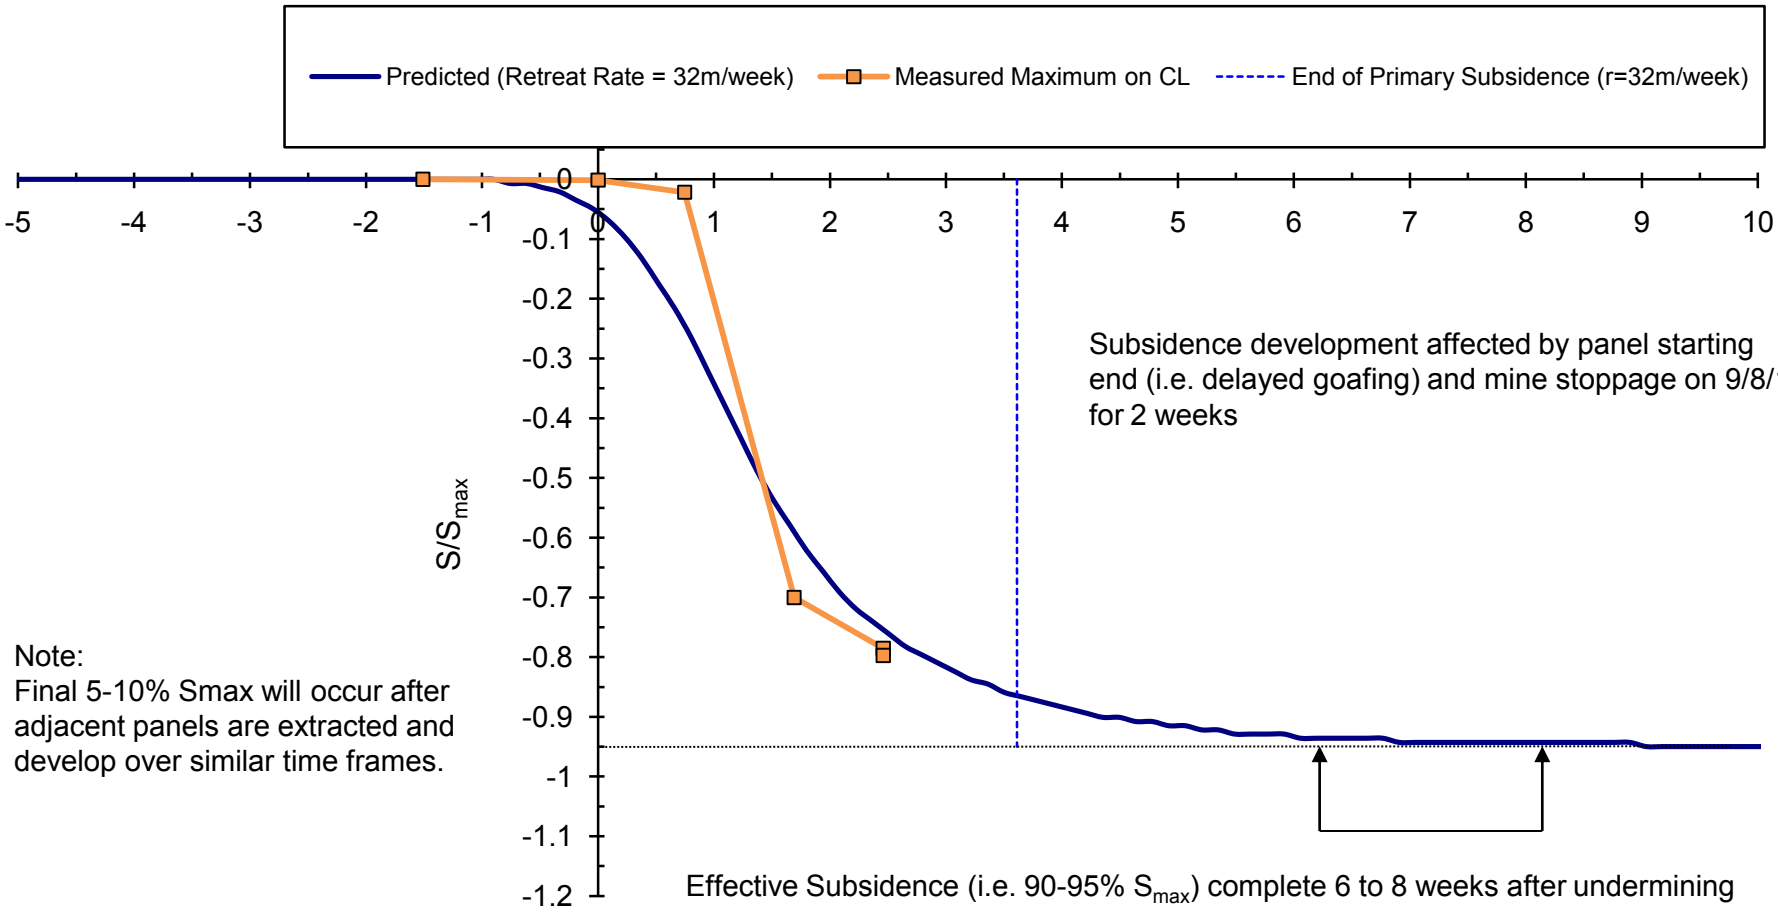
Abel Subsidence Development Rates – Area 1



Note:
Final 5-10% Smax will occur after adjacent panels are extracted and develop over similar time frames.

SMP Area 2

- Surface above application area comprises a combination of land owned by Black Hill Land Pty Ltd, the Catholic Diocese of Maitland and Newcastle, a narrow strip traversing the area owned by Hunter Water Corporation, ten private properties and two public roads;

- Man made and natural features potentially impacted by subsidence arising from mining this area, are
  - Catholic Diocese of Maitland / Newcastle land, Stock water supply line; access roads and tracks; various fences, Principal Residence, disused, unoccupied residences – Property Management Plan to be prepared;
  - Black Hill Land Pty Ltd land, access roads and tracks – Property Management Plan to be prepared;

Key features

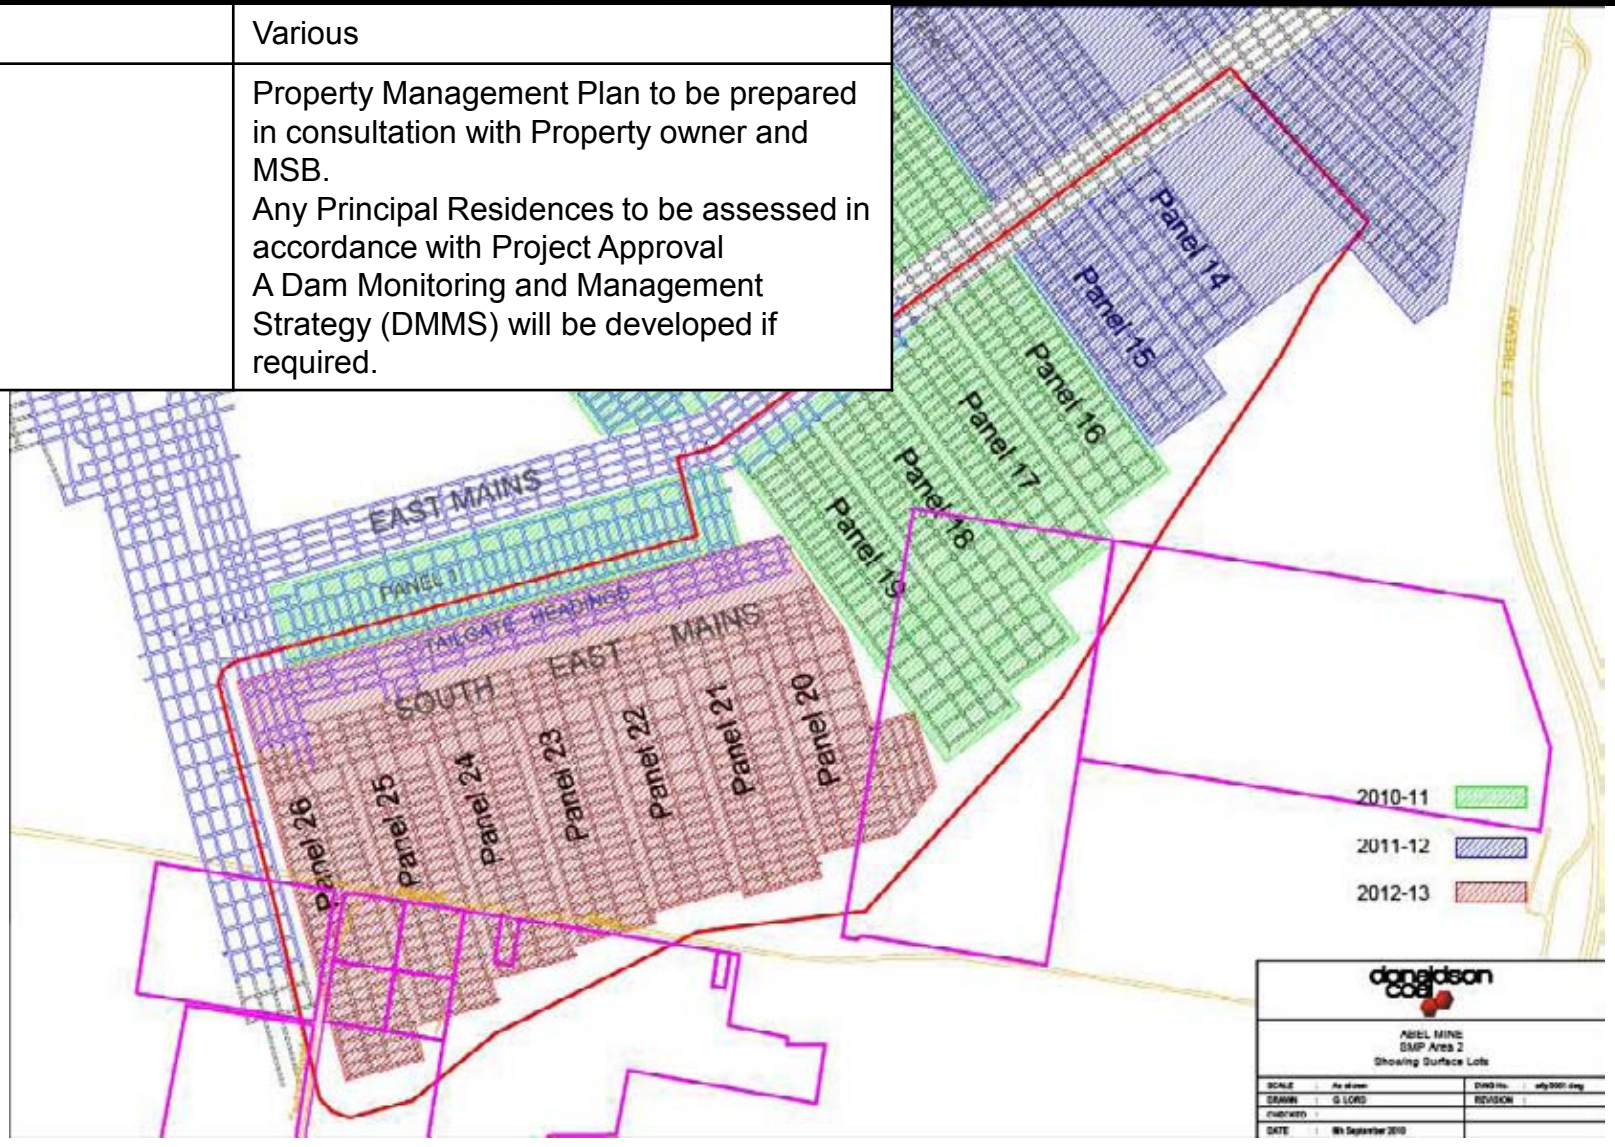
- Private properties and Principal Residences – Property Management Plans to be prepared – to include Mine Subsidence Board inspection, Dam Monitoring & Management Strategy and also consideration of outbuildings and other improvements as `other surface structures'. Discussions will also be held, as part of the SMP application preparation with property owners and the MSB regarding mitigation / rehabilitation and responsibilities
- Black Hill Road – Management Plan to be prepared in consultation with Cessnock City Council
- Telstra Copper cables – Management Plan to be prepared in consultation with Telstra.
- Hunter Water Corporation water pipeline – Existing Infrastructure Management Plan to reviewed;
- Energy Australia rural 11kV and 132kV power lines – Existing Infrastructure Management Plan to reviewed;

Key features

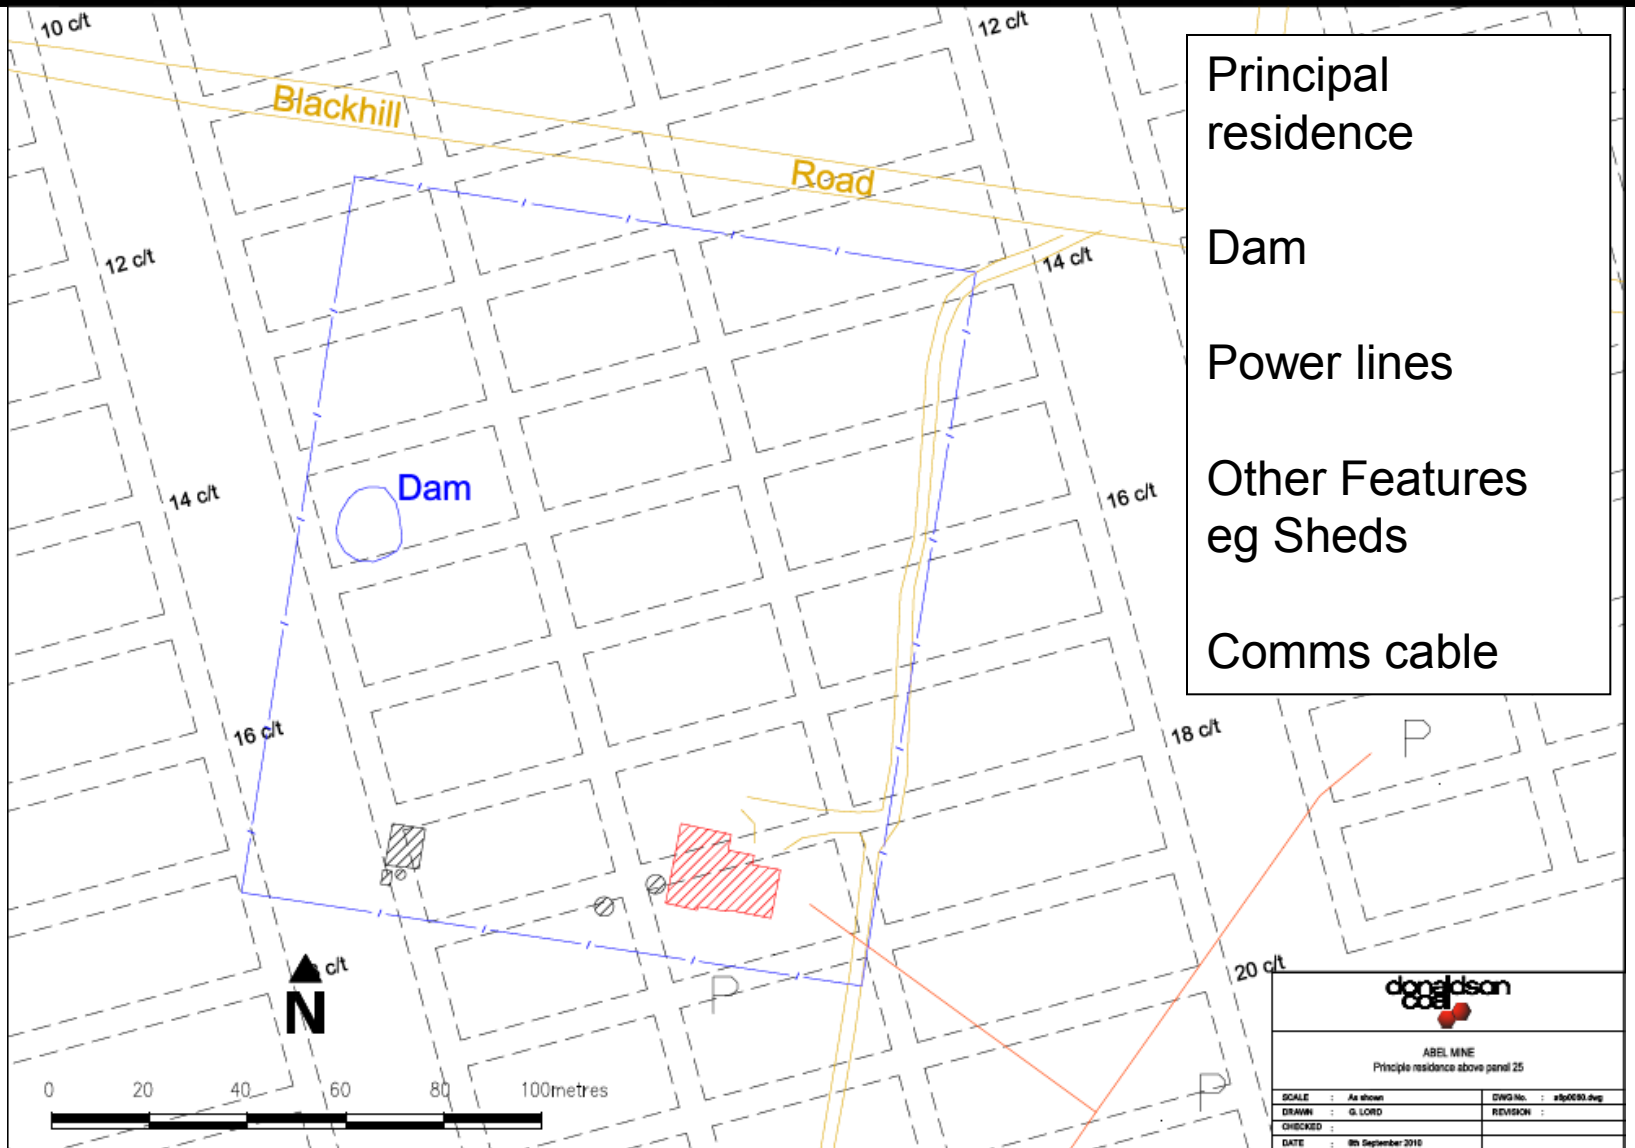
- Transgrid 330kV power line – Existing Infrastructure Management Plan to reviewed;
- Optus fibre optic cable – continued discussions relating to relocation and/or Management Plan
- Layout of the panels has been designed to provide management outcomes of subsidence impacts in line with the Statement of Commitments and Project Approval
- Maximum predicted subsidence in the application area ranges between 1.0m and 1.9m
- Maximum predicted strains from 5 to 20mm/m, and
- Maximum predicted tilts from 10 to 48mm/m excluding areas nominated to be protected.

Private Properties

Timing	Various
Detail	Property Management Plan to be prepared in consultation with Property owner and MSB. Any Principal Residences to be assessed in accordance with Project Approval A Dam Monitoring and Management Strategy (DMMS) will be developed if required.



Typical Private Property Infrastructure



Principal residence

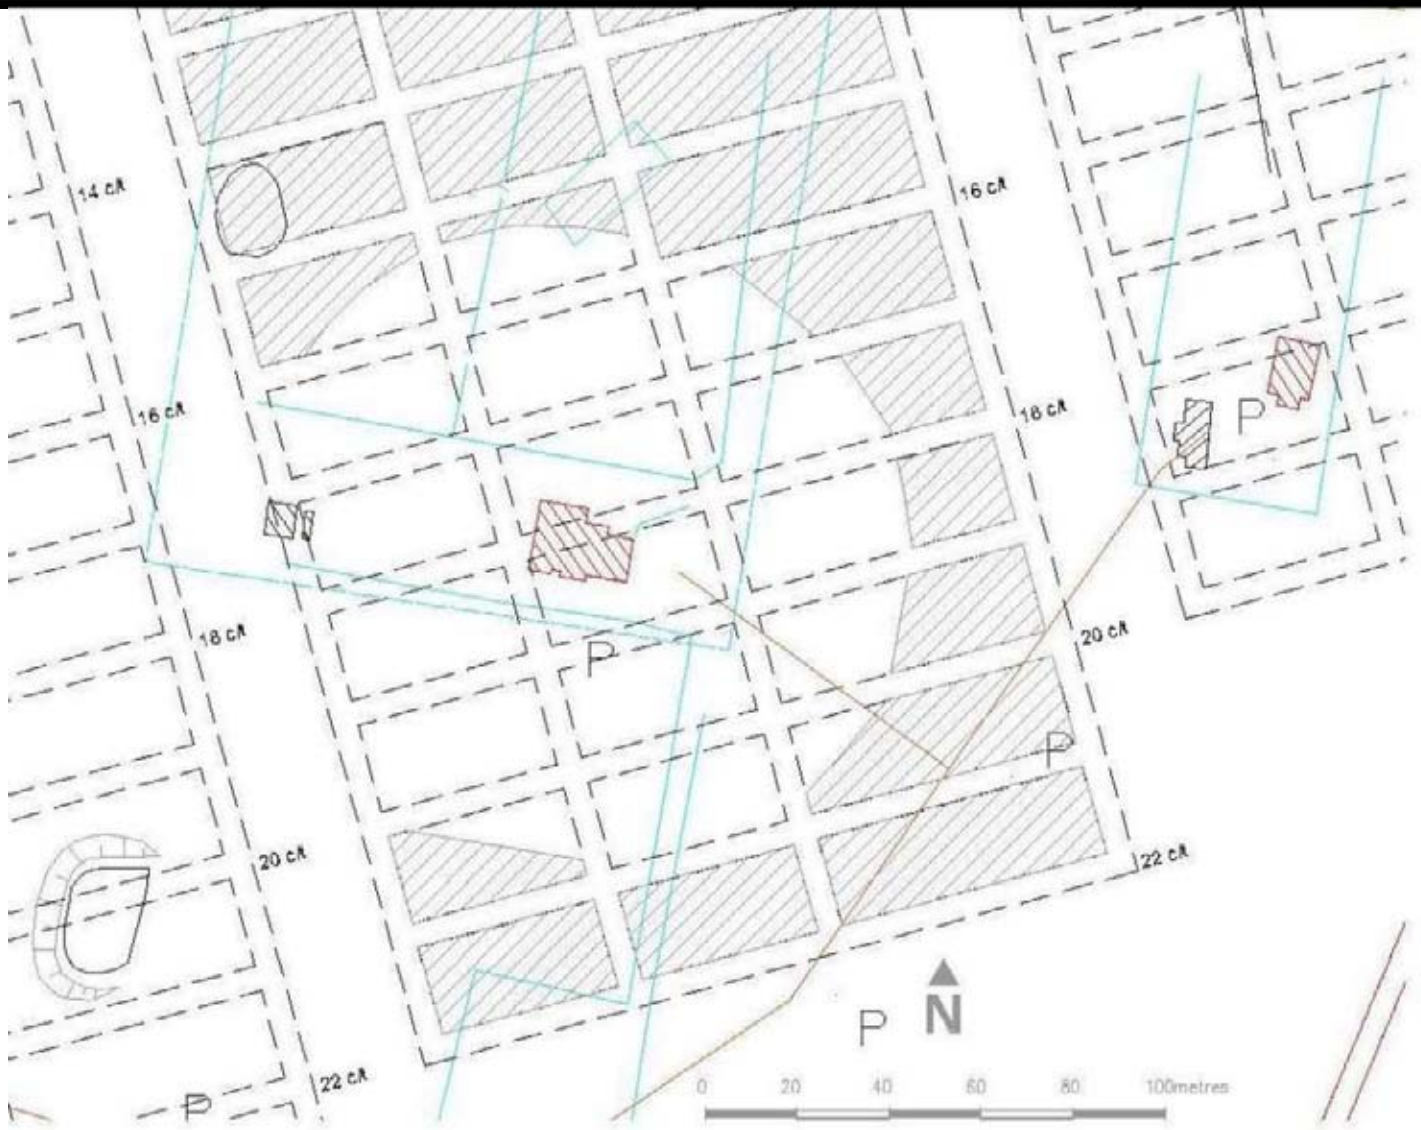
Dam

Power lines

Other Features eg Sheds

Comms cable

Typical Private Property Infrastructure

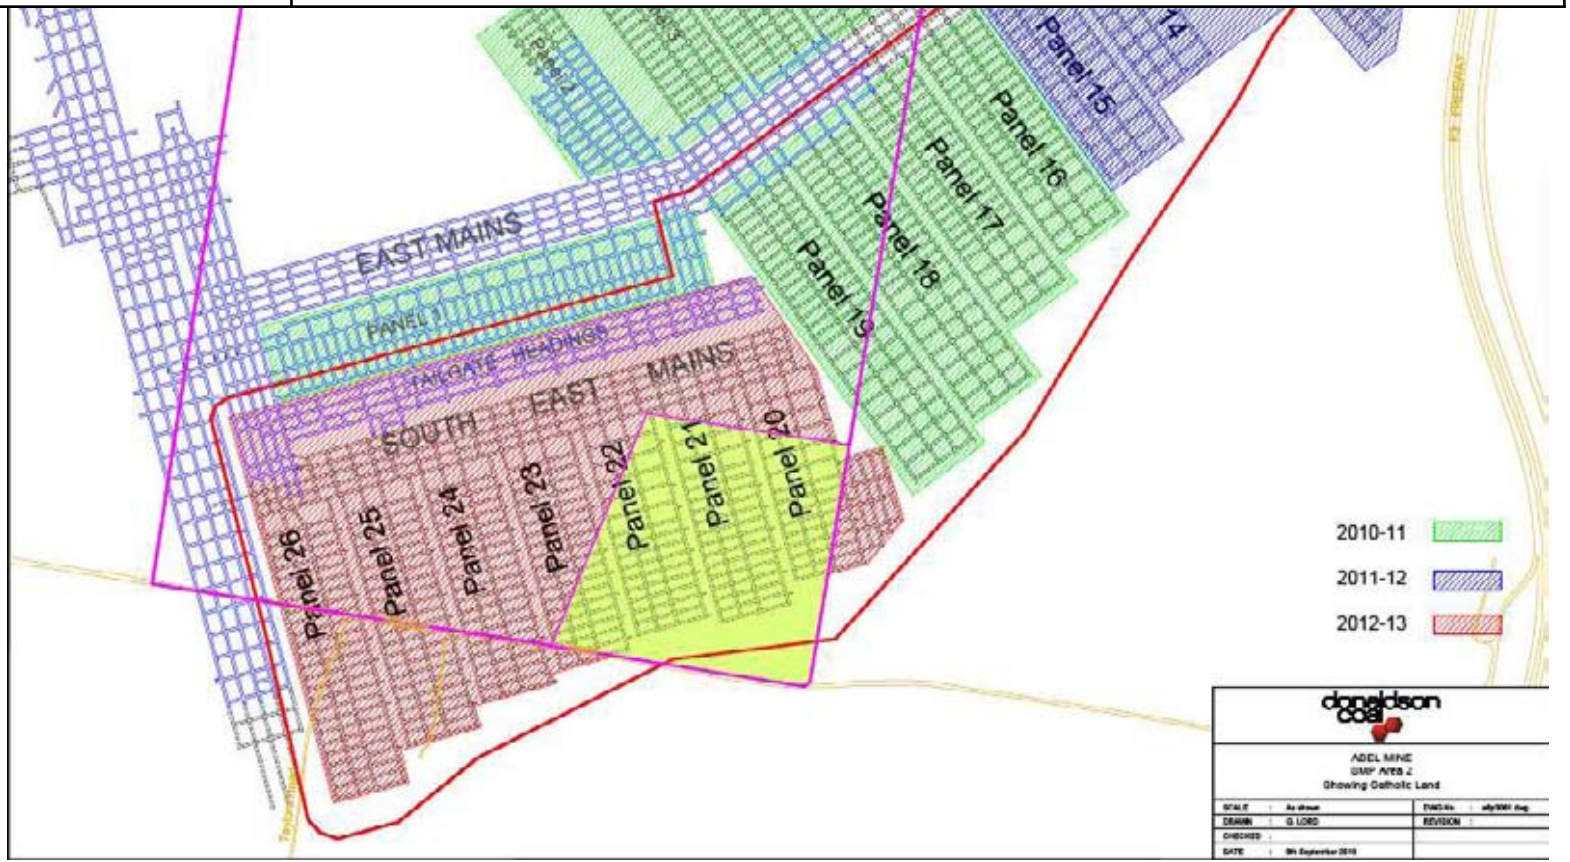


Dams

- A Dam Monitoring and Management Strategy (DMMS) will be developed for all dams prior to any mining impact.

Catholic Diocese Land

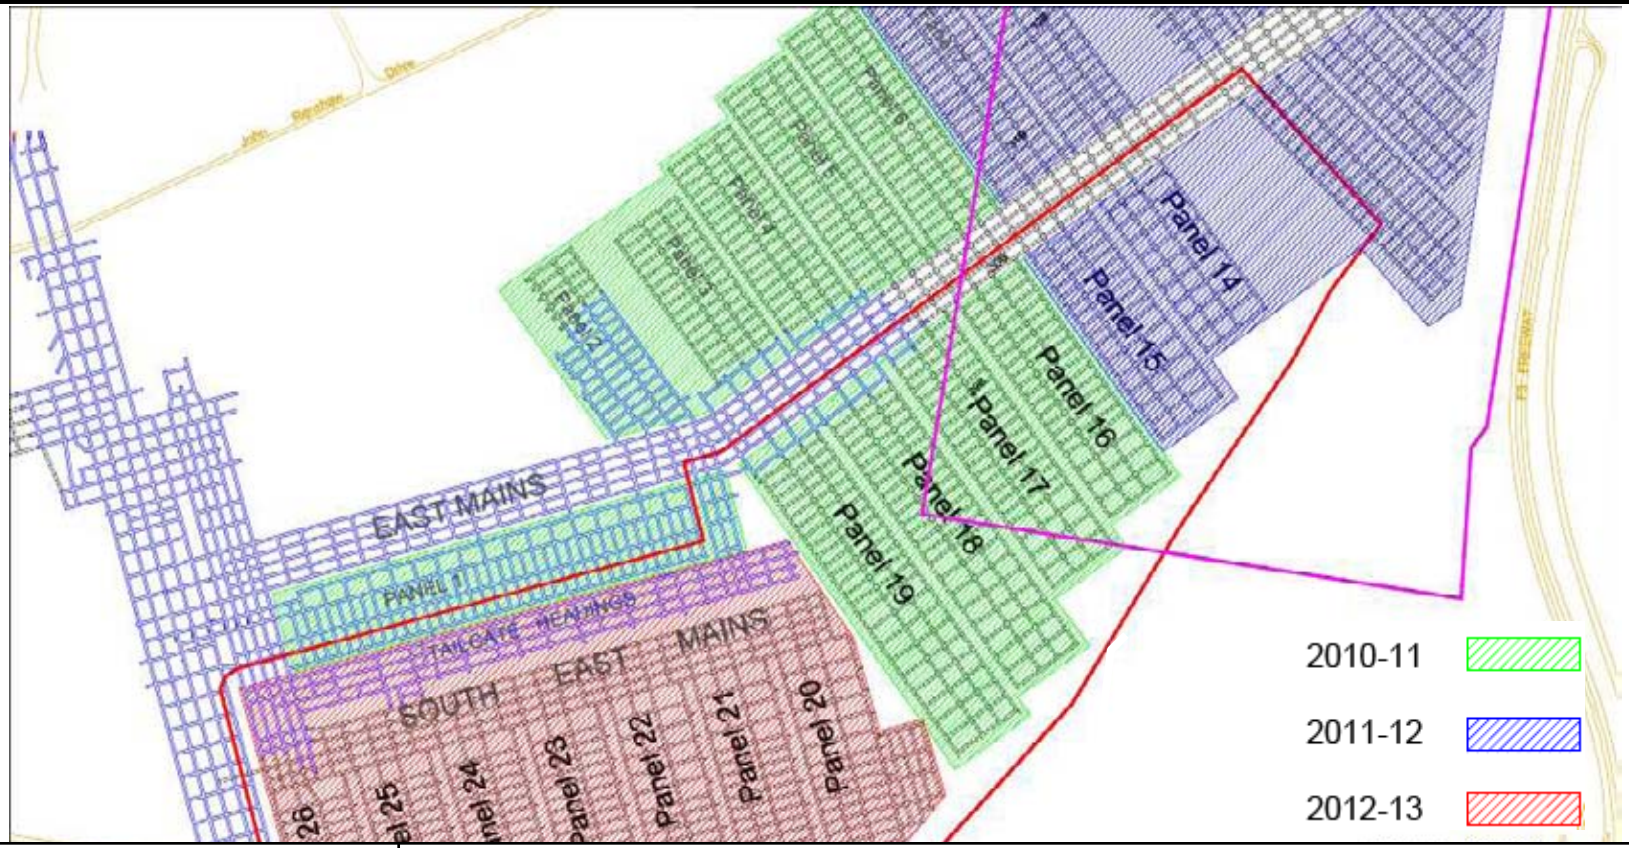
Timing	Extraction- Panel 19
Detail	Cattle agistment and stock watering system. Principal Residence area.
Property Management Plan	Draft completed
Access agreement	In place
Mining schedule agreement	In place



Catholic Diocese Land

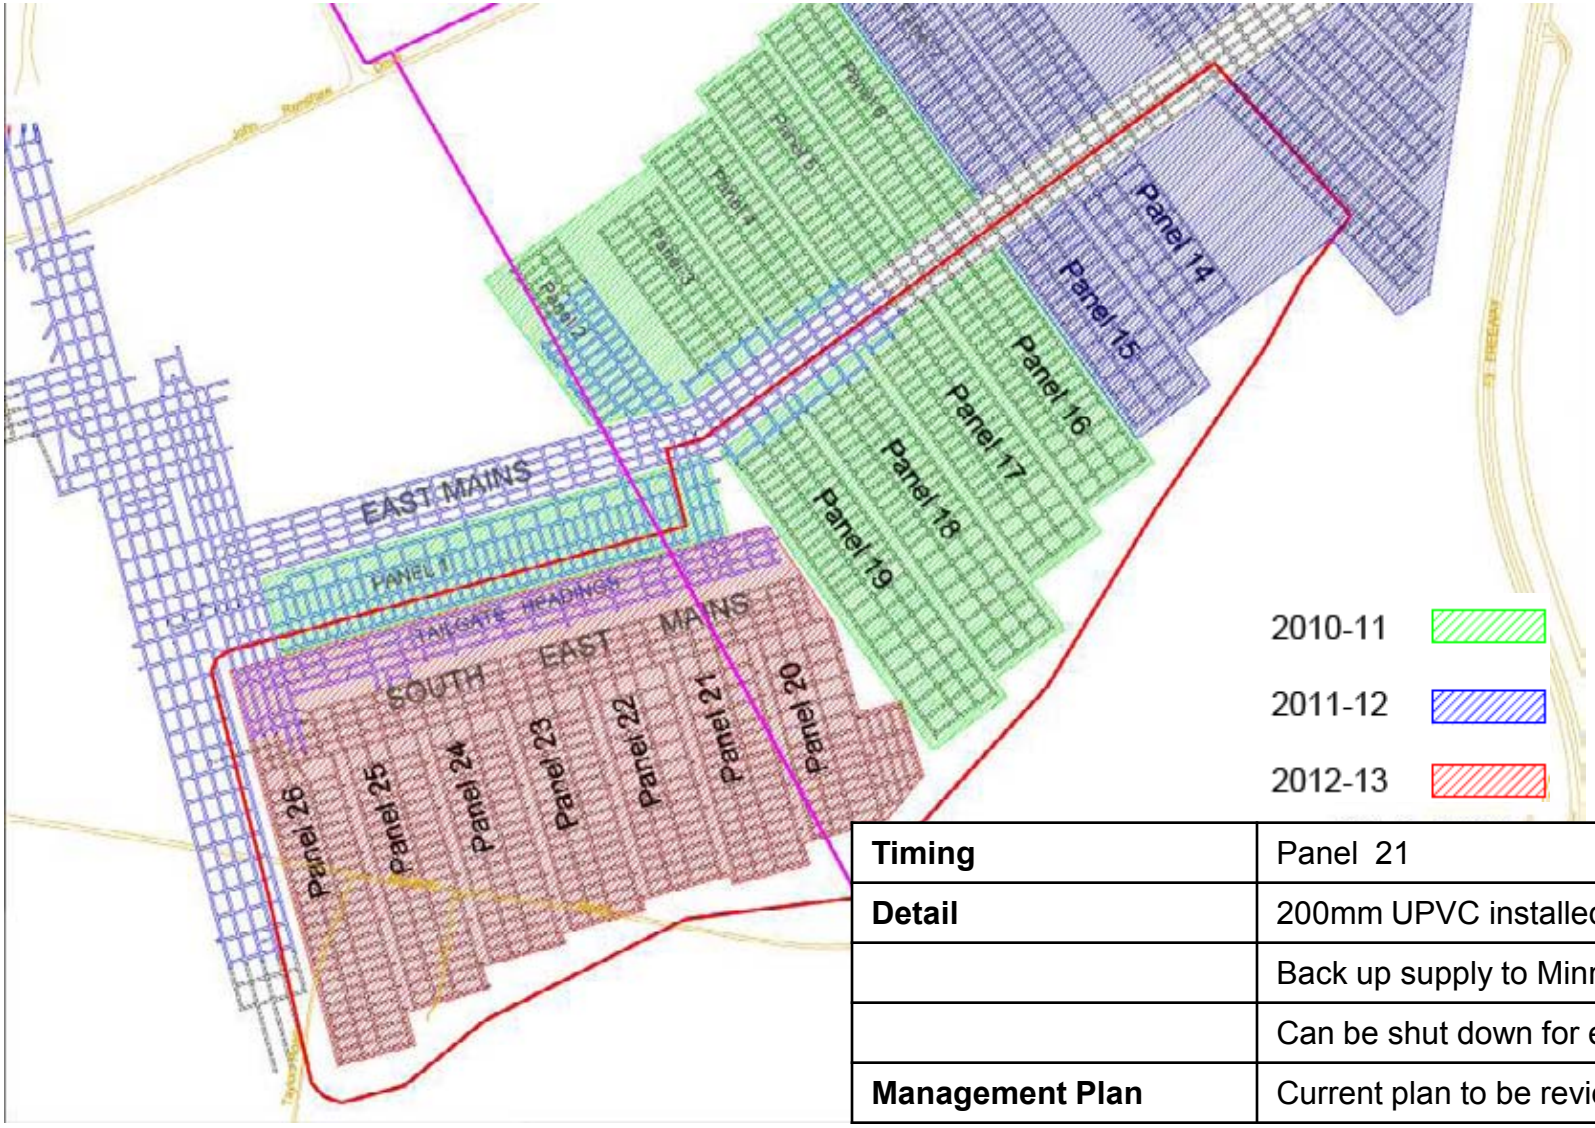
- Irrigation system for cattle agistment
- Fences/gates/cattle grids
- Cattle yards/Holding yards
- Access tracks

Black Hill Land Pty Limited



Timing	Extraction- Panel 18
Detail	Black Hill Land P/L is seeking concept plan approval for industrial development
Property Management Plan	Draft completed
Access agreement	To be Developed
Mining schedule agreement	Draft completed

Hunter Water Pipe line

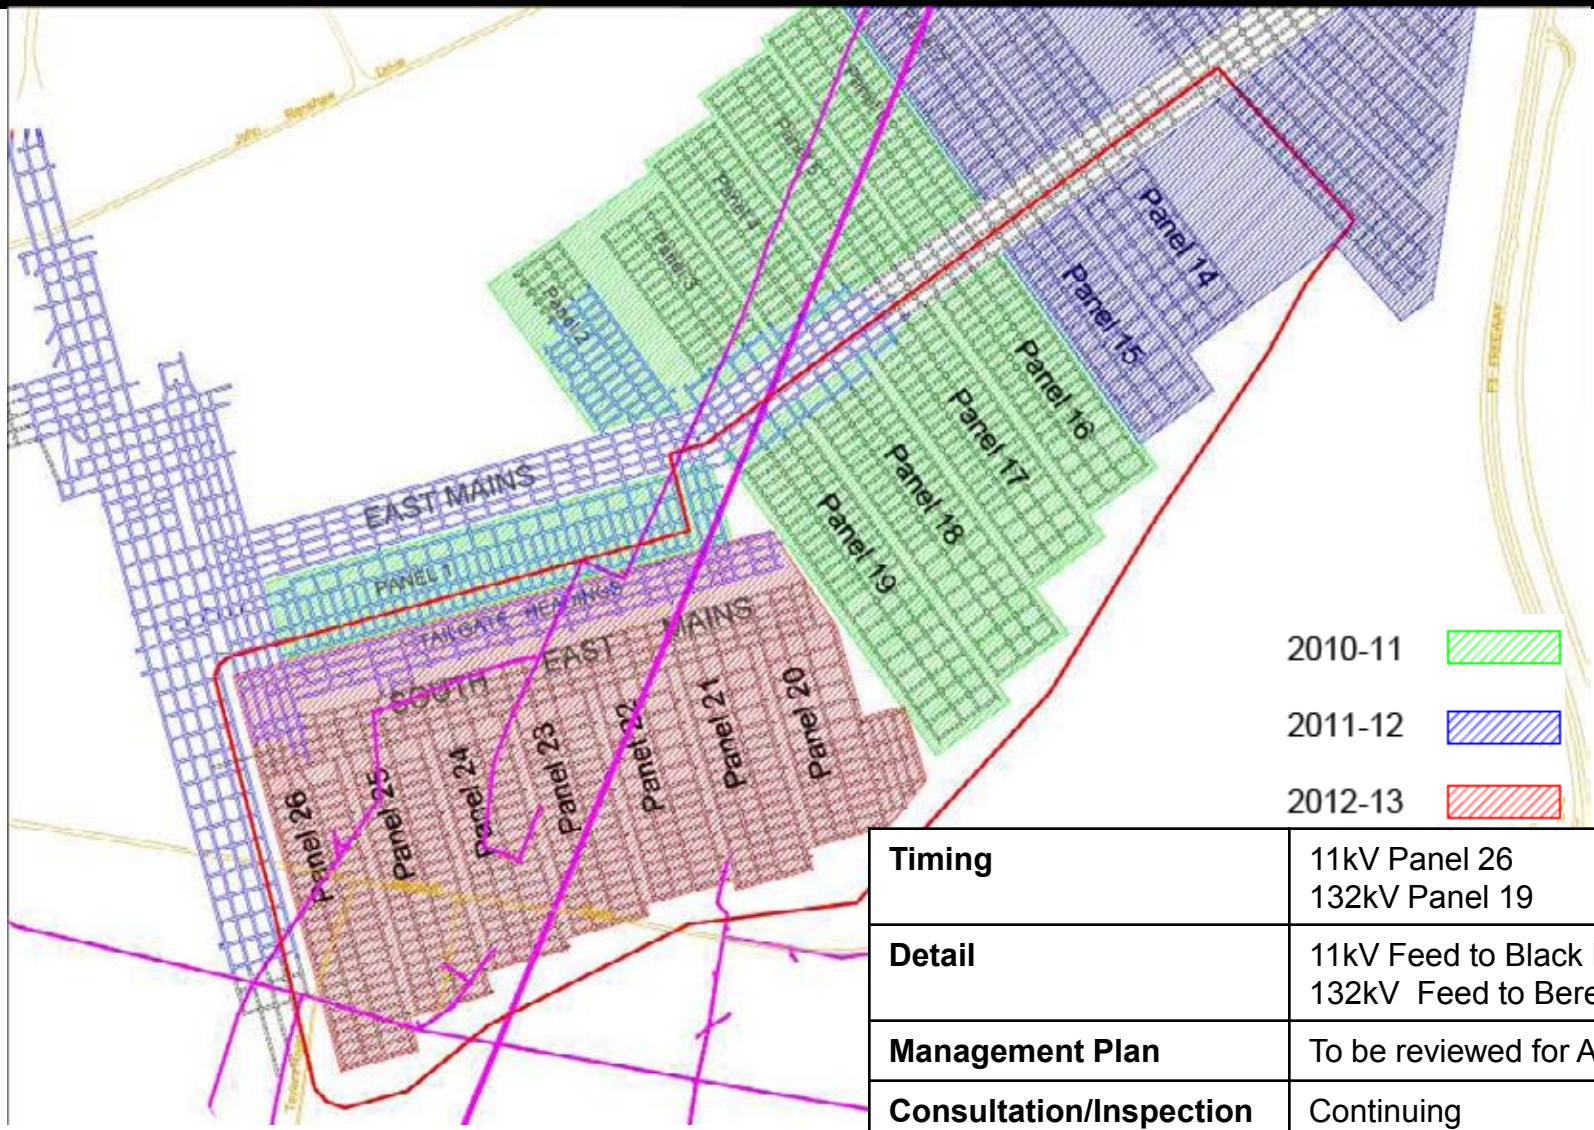


Timing	Panel 21
Detail	200mm UPVC installed in 1992
	Back up supply to Minmi area
	Can be shut down for extended periods
Management Plan	Current plan to be reviewed for Area 2

Hunter Water Pipe line

- 500mm cast iron pipe installed late 1800's
- 200mm UPVC pipe installed 1992 to replace 500mm pipe in anticipation of mining subsidence
- Subsidence lines installed for Panels 1,2
- Management Plans already in Place for Panels 1 and 2

Energy Australia Power Lines

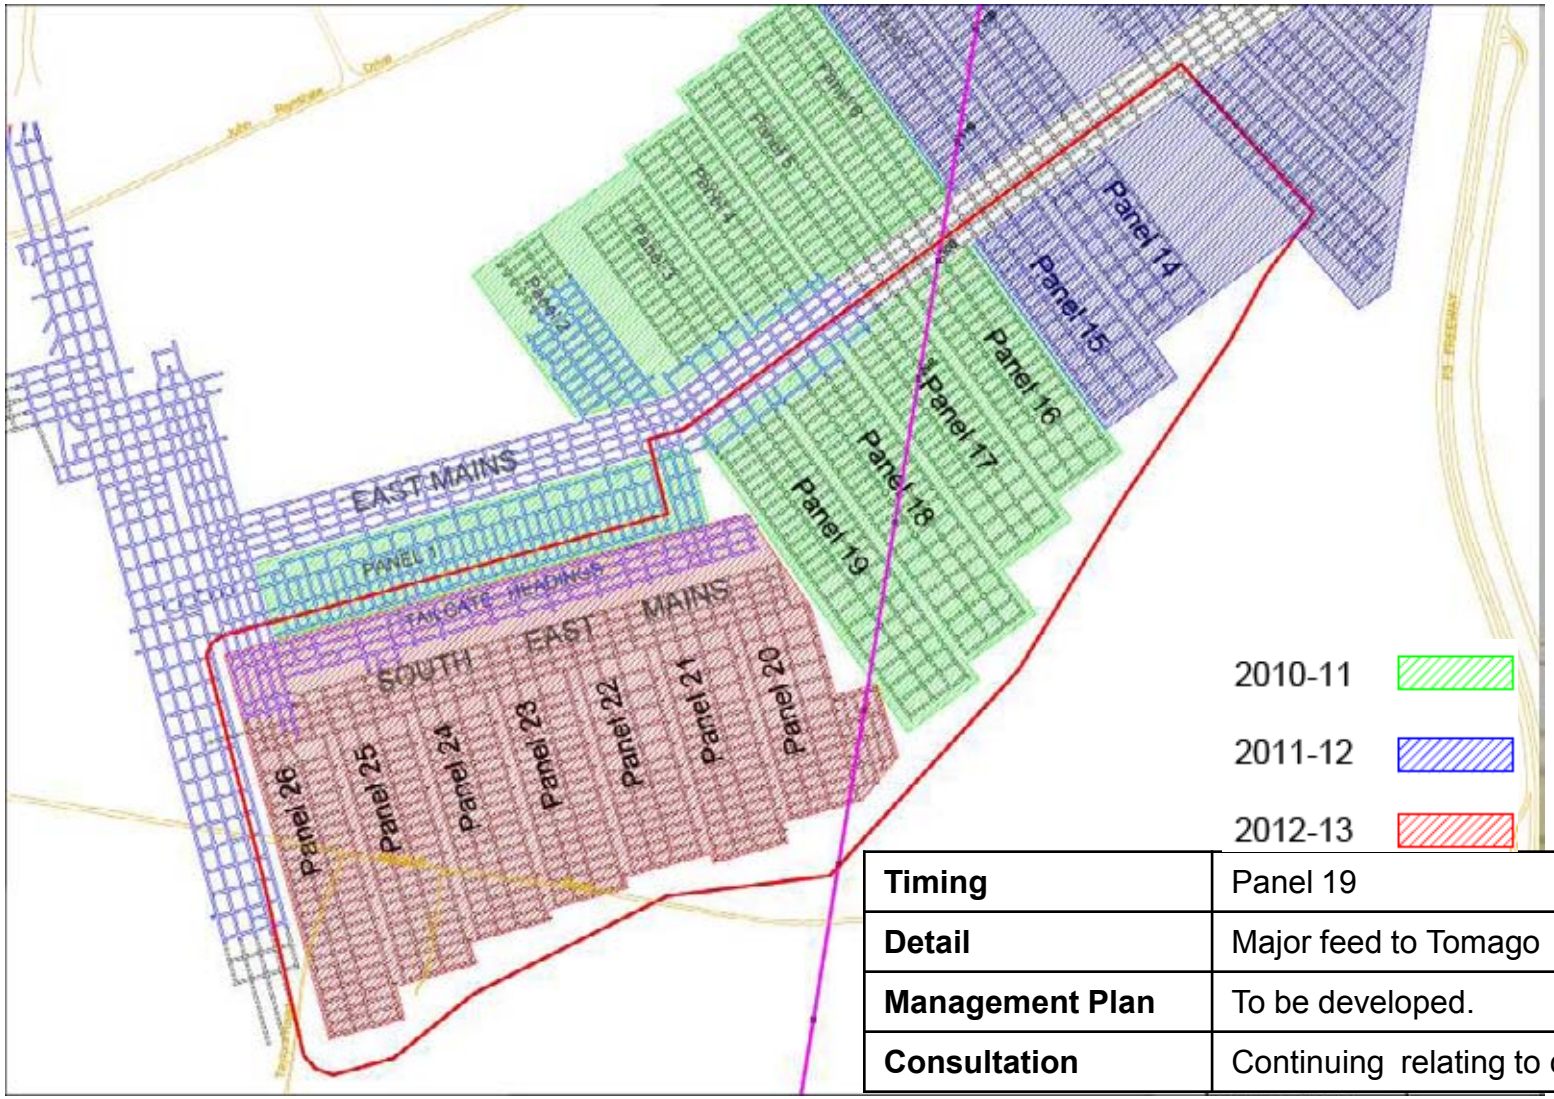


Timing	11kV Panel 26 132kV Panel 19
Detail	11kV Feed to Black Hill 132kV Feed to Beresfield
Management Plan	To be reviewed for Area 2
Consultation/Inspection	Continuing

Energy Australia 132kV Power Line

- Installed 1960's
- Feed to Beresfield area from Killingworth 330/132kV sub station
- Critical power supply
- Steel channel cross arm
- 3 power conductors and 2 Earth wires
- Spacing at ~200m across SMP area
- Management plan to be developed in consultation with EA to ensure serviceability of power line
- Timing Panel 19

Transgrid 330kV Power Line



Timing	Panel 19
Detail	Major feed to Tomago
Management Plan	To be developed.
Consultation	Continuing relating to cruciform footings

Transgrid 330kV double circuit steel towers

- Installed in 1982/1983
- Critical feed to Tomago area
- 5 suspension towers in SMP Area 2
- Key issues
  - Vertical displacements may reduce clearance from ground surface and lead to infringement of statutory requirements for clearance of transmission lines (6.7m)
  - Horizontal displacement and tilt may affect the alignment and tension of the transmission lines
- Management plan to be developed in consultation with Transgrid to ensure serviceability of power line
- Timing Panel 19

Transgrid 330kV double circuit steel towers

Cruciform footings

• Cruciform footings installed under suspension towers in 1982 in anticipation of future U/G Mining

•Designed to withstand 9.1m of sub from multi level seams

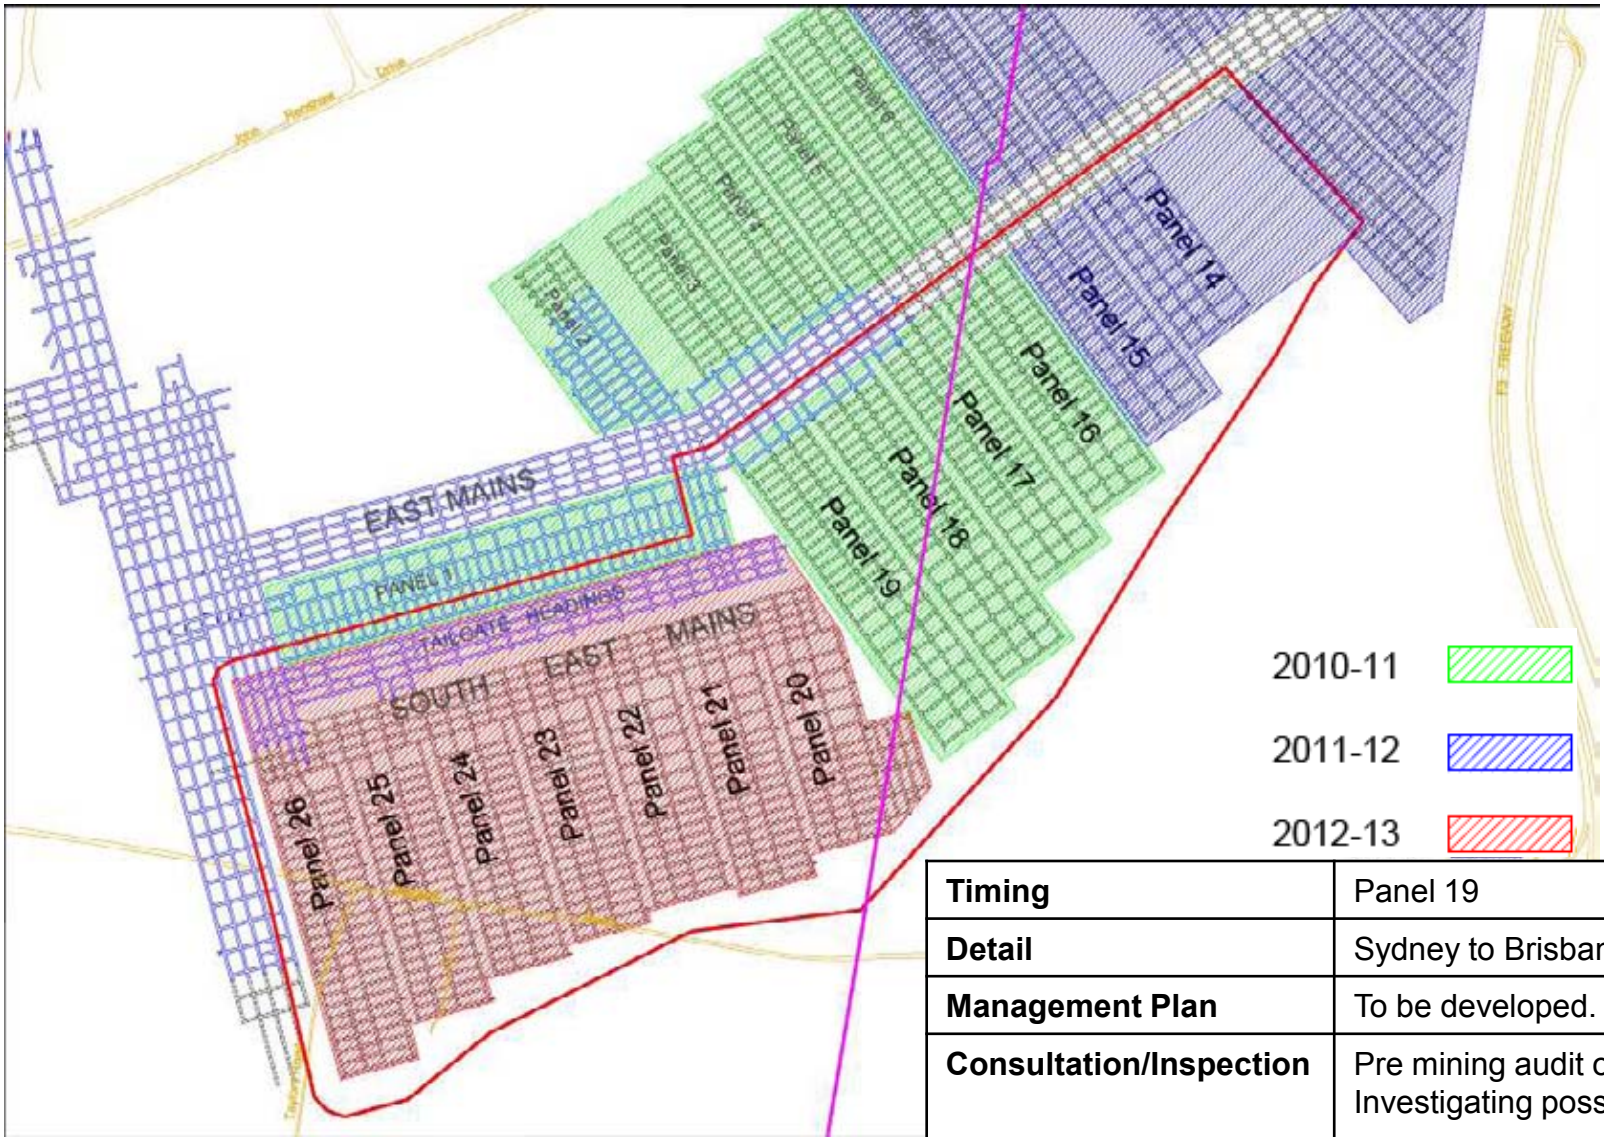
• The footing acts to tie the legs of the tower together to prevent spreading and to prevent the transfer of ground strains into the structure itself

• The size of the footing is such that the mass can prevent overturing of the tower in the event of extreme loading

• Similar towers in Newcastle district have been subsided 2m

• MSB have reported that their success has led to significant reserves of coal beneath towers being mined

Optus Fibre Optic cable

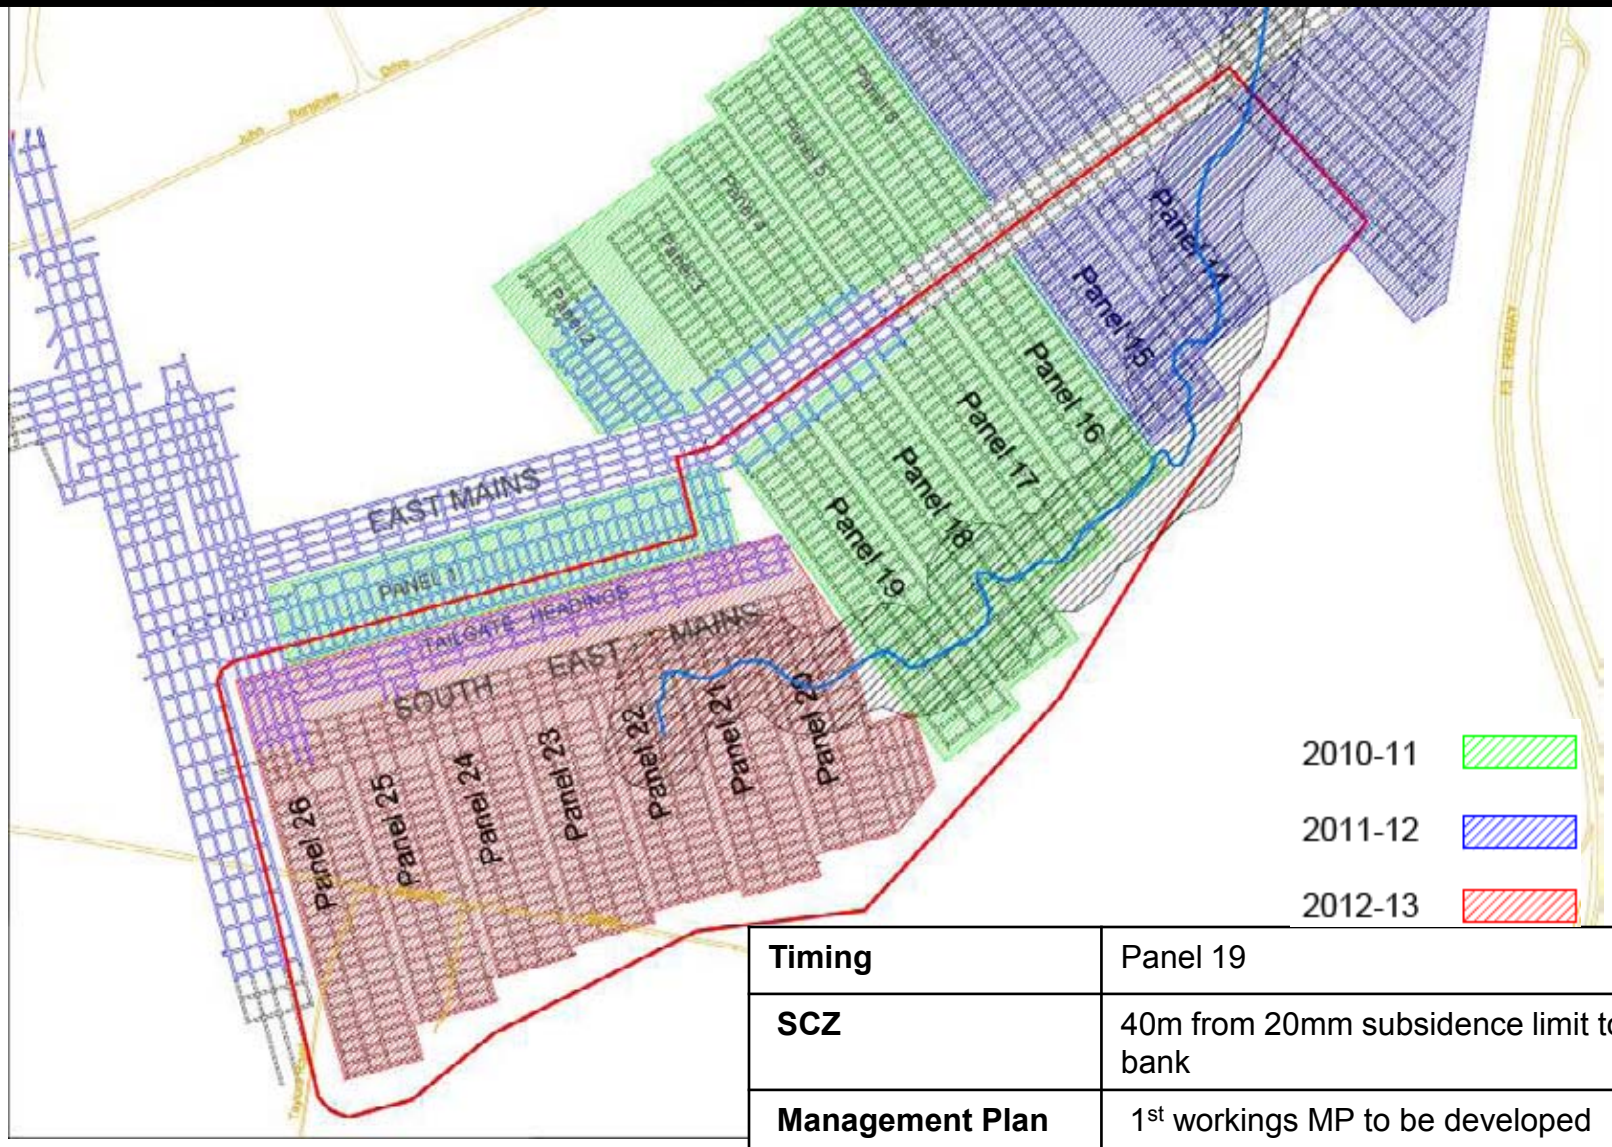


Timing	Panel 19
Detail	Sydney to Brisbane
Management Plan	To be developed.
Consultation/Inspection	Pre mining audit of cable completed. Investigating possible relocation.

Optus Fibre Optic

- Installed adjacent to Transgrid 330kV line in early 1980's
- Cable directly buried underground
- Designed to tolerate subsidence parameters based on F3 easement
  - 150mm subsidence
  - 1.0 mm/m strain
- Optus have own internal Management plan (similar to ones developed with other local mining companies)
- Donaldson Coal and Optus consulting on relocation and/or Management Plan
- Timing – Panel 19

Viney Creek



Timing	Panel 19
SCZ	40m from 20mm subsidence limit to the bank
Management Plan	1st workings MP to be developed

Viney Creek

- Schedule 2 Creek (as per Strahler system)
- Viney Creek flows through the SMP area from south to north. It flows under John Renshaw Drive and eventually discharges into Woodberry Swamp, a wetland system of the Hunter River estuary
- Ephemeral flow
- Heavily vegetated, and in places is heavily choked with weeds and reeds
- Depth of cover 115m to 120m in subject area
- As per Project approval, protected by 40m barrier from stream banks to the 20mm vertical subsidence contour

Panel 14

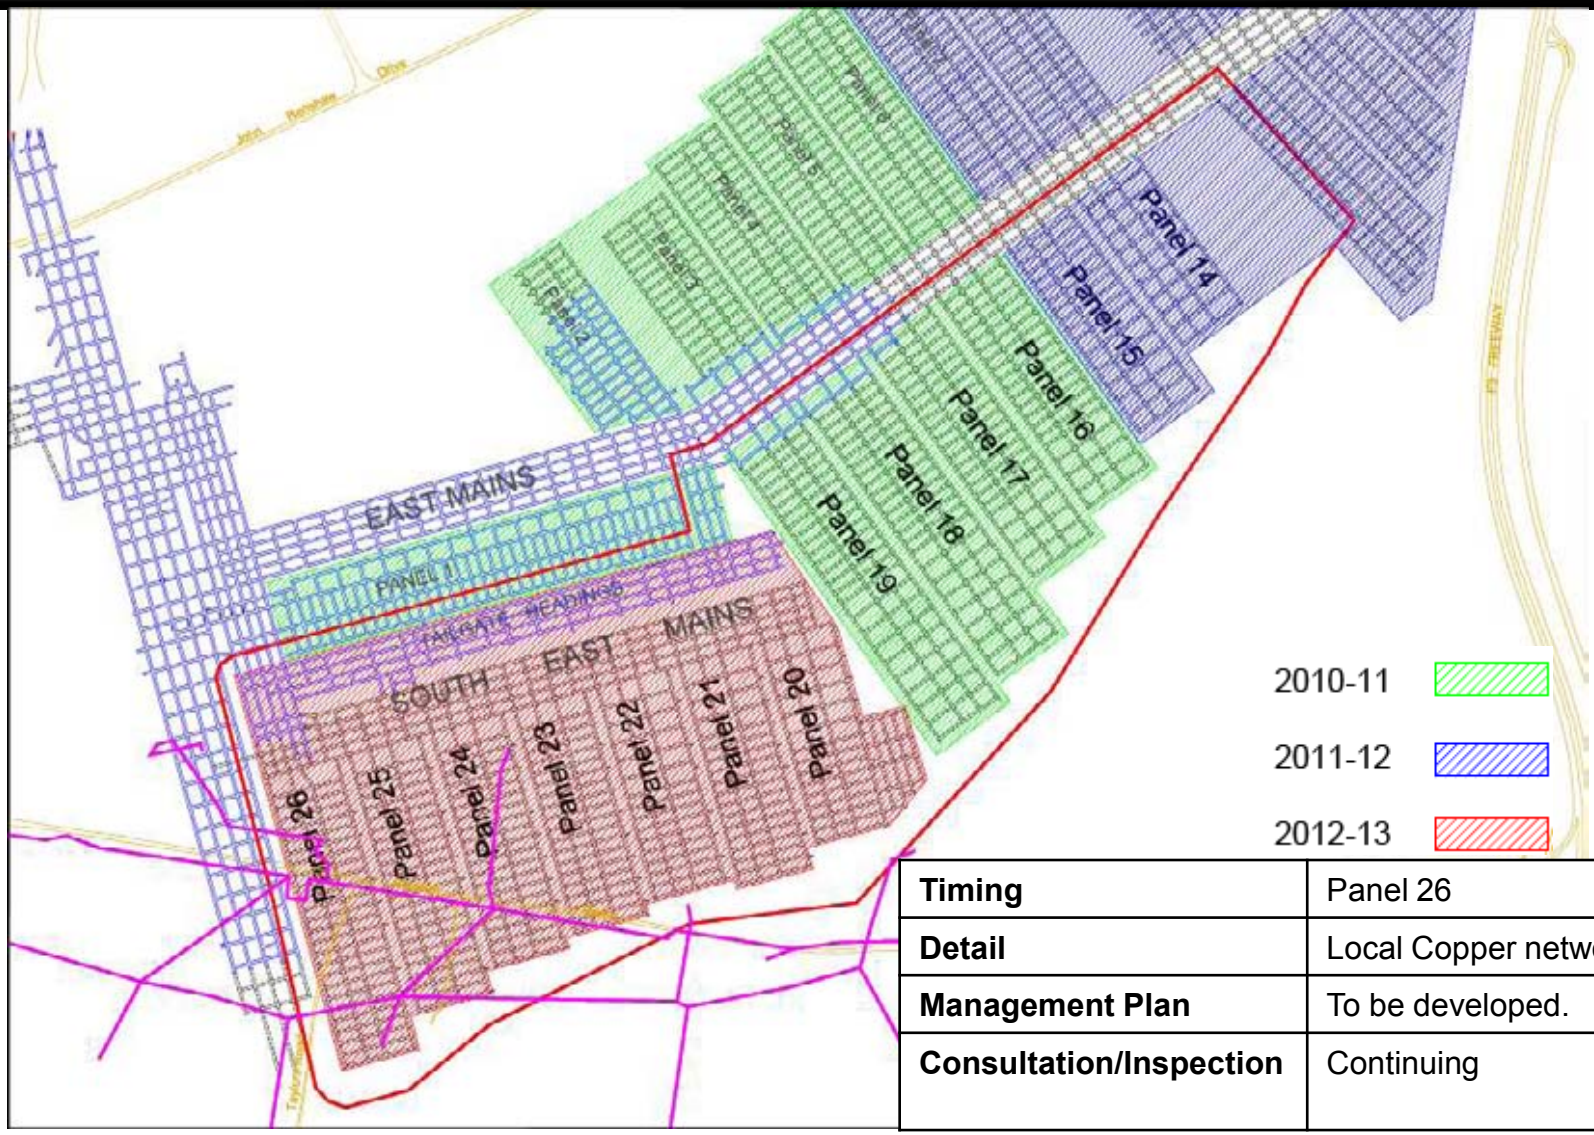
Viney Creek

- The stream has a high capacity to reduce erosion effects from subsidence due to its significant natural and introduced (weed/reed) vegetative cover
- In accordance with Project Approval Donaldson may undertake further extraction within this barrier should further studies indicate that such extraction can take place without compromising specified environmental objectives
- Final degree of extraction will depend on an iterative monitoring / assessment / prediction of a suitable degree of extraction under the creek based on observation of prior mining in similar geomorphology / mining layout / depth of cover etc situations in prior panels away from the creek.
- Timing Panel 19

Telstra Comms cables



Timing	Panel 26
Detail	Local Copper network
Management Plan	To be developed.
Consultation/Inspection	Continuing

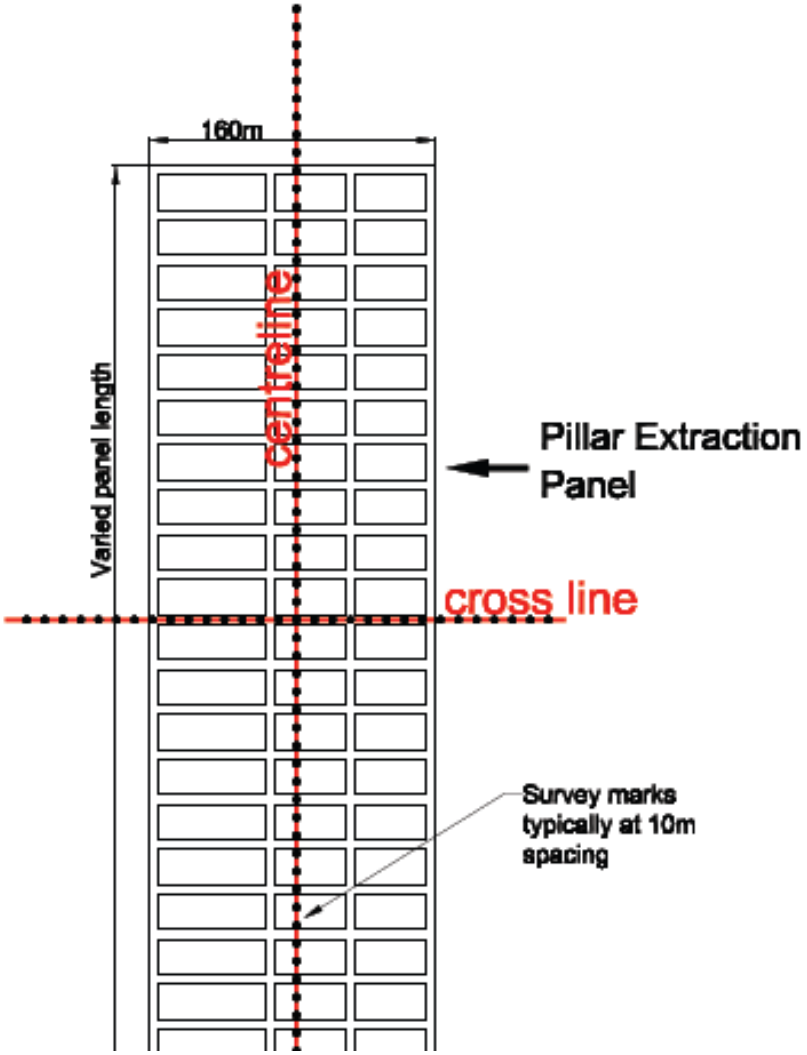
Black Hill Road

- The Company shall prepare and implement a Management Plan in consultation with Cessnock City Council. This plan of management will ensure the safety and serviceability of Black Hill and Taylors public roads

Proposed Monitoring

- Subsidence monitoring consisting of surveys, photographic and visual monitoring, including Principal Residence inspection and surveys;
- Dam and other improvement monitoring, pre and post mining surveys;
- Ecological monitoring, fauna and flora;
- Surface and groundwater monitoring;
- Infrastructure monitoring, survey, photographic and visual.
- Flora – specialist consultant
- Fauna – specialist consultant
- Groundwater – piezometers – specialist consultant
- Surface water- flow, water quality
- Subsidence surveys
- Visual inspections
- Photographic records

Subsidence Monitoring



Typical Subsidence Monitoring Program for Pillar Extraction Panels

- Approved by Industry & Investment NSW
- Panel length ranges from 400m to 1,100m
- Centre and cross line survey marks typically at 10m centres
- Feno survey markers used for SMP Area 1
- Removed after effective subsidence completed

Abel Area 2 SMP Schedule

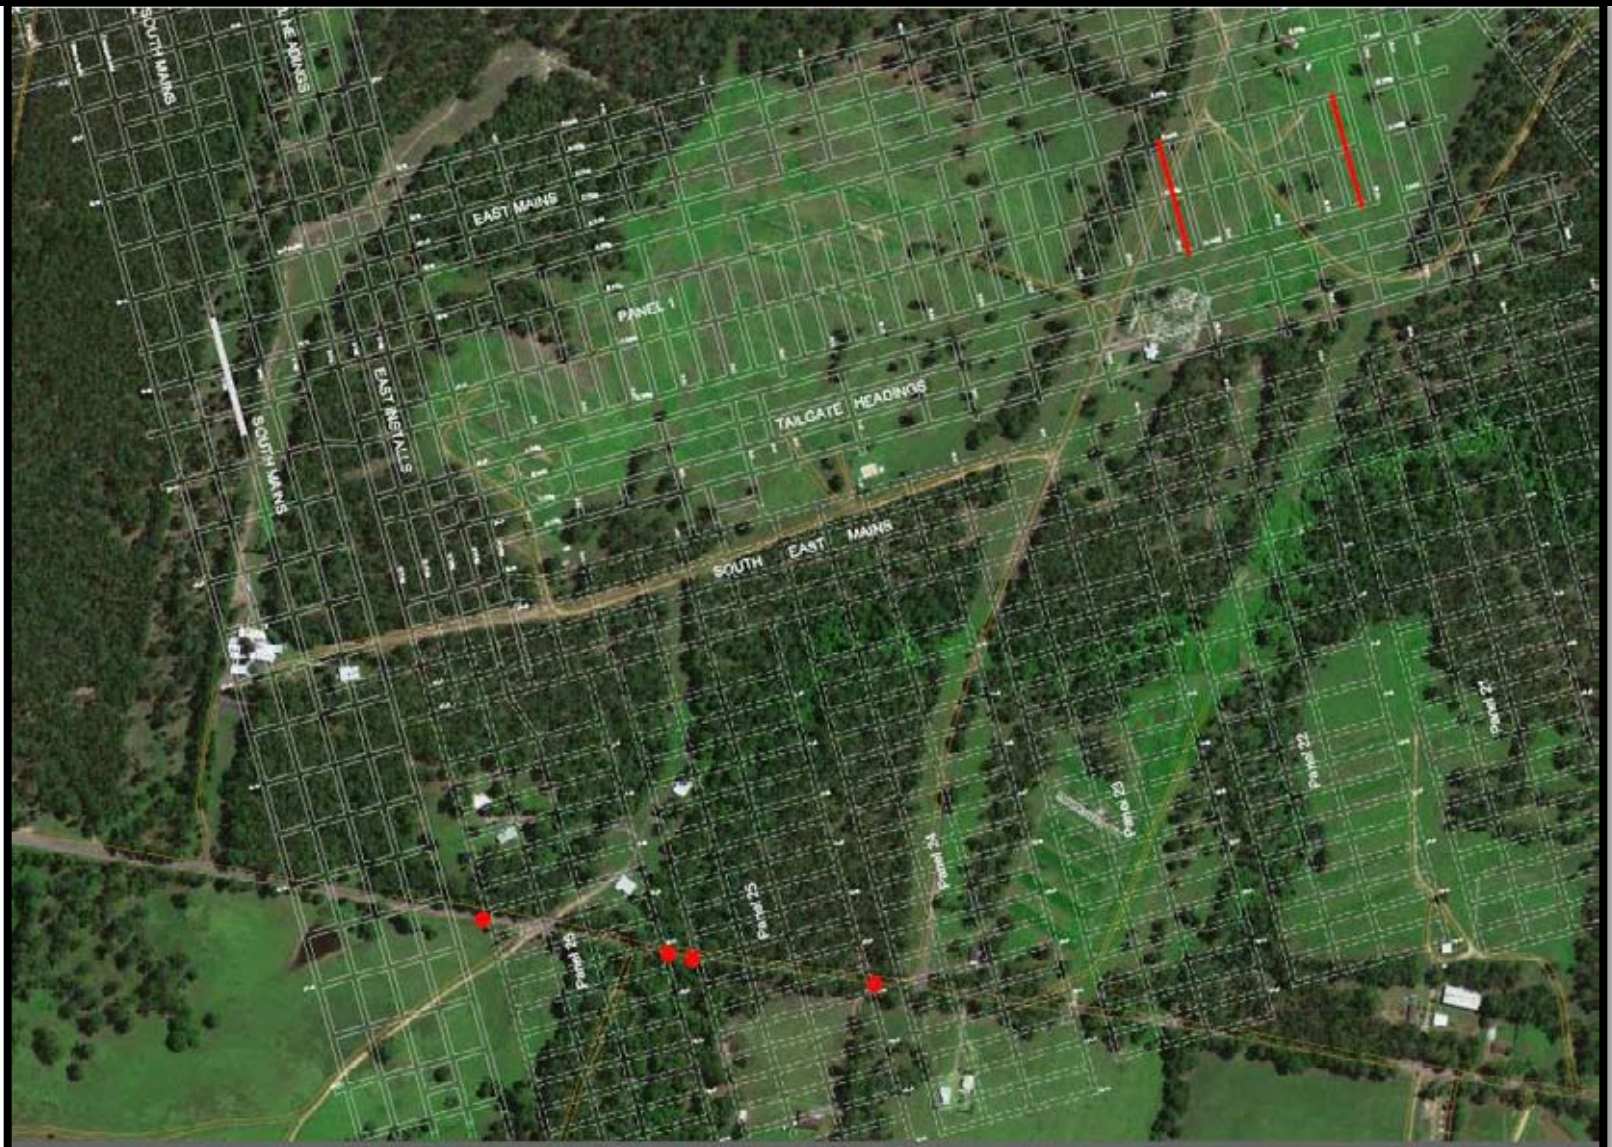
- Consultation commenced in CCC meeting 2010 and will continue throughout the preparation of the SMP application with
  - Industry & Investment and relevant agencies
  - Abel Community Consultative Committee
  - Landholders, and
  - Infrastructure owners
- Following this presentation and field inspection a Risk Assessment will be conducted to assess all risks and will include items raised from today. A member of the CCC will be in attendance.

- Preparation of the SMP Application will then continue with the aim to lodge the document in mid October 2010.

Abel Area 2 SMP Schedule

- Submit SMP Application (October 2010)
- Advertise submission of SMP Application
- Display period and opportunity for further community input (November 2010)
- Review of application (Industry & Investment then Inter Agency Review Committee)
- Determination – approval sought for commencement of pillar extraction (February 2011)

Site Inspection SMP Area 1 Panel 1



ABEL UNDERGROUND COAL MINE

SMP Area 2 Stakeholder Meeting

Thursday 9th September 2010 (9am to 1pm)

Abel Underground Mine Administration Building

Minutes

1. **Opening and welcome –** Tony Sutherland (Technical Services Manager – Underground Operations

2. **Attendees**

Terry Lewin (Abel Mine CCC member), Carol Fraser (Resident), Noel & Daphne Blanch (Residents), Peter Allen (Resident), Rodney Lodge (Resident), Rod Taylor (Resident), Bruce & Joyce Doyle (Residents), Anne Clark (Resident), Doug Clark (Resident), Rosalie and Anthony Seton (Residents), Garry Moore (Mine Subsidence Board), Bruce Fraser (Transgrid), Brian Magin (Transgrid), Damien Harrigan & Sean Scanlon (Catholic Diocese of Maitland-Newcastle), Rod Sandell (Cessnock City Council), Steve Ditton (Ditton Geotechnical Services), Geoffrey Rock (Coal & Allied), Jonathon Smith (Industry & Investment NSW), Ray Ramage (Industry & Investment NSW), Colin Dove (Telstra Consultant), Johannes Honnef (Newcastle City Council), Andrew Fulton (Aquaterra), Kevin Price (Brunskill Pty Ltd),
Mark McPherson, Adam Heeney, Phil Brown, Tony Sutherland, Alison Freeman (Donaldson Coal)

3. **Apologies**

Alan Brown (Abel Mine CCC member), Karen Marler (DECCW), Mark Schneider (Telstra)

4. **Meeting agenda**

A PowerPoint presentation (***see copy on web site***) was then delivered by Tony Sutherland covering the agenda items below with Steve Ditton from Ditton Geotechnical Services giving an overview on the subsidence results from SMP Area 1 and the subsidence predictions for SMP Area 2.

- Introduction and Meeting Objectives
- Donaldson Coal Background
- The Subsidence Management Plan (SMP) Process
- Abel Mine
    - Project Approval
    - Mine Planning
    - Mining Methods
    - Area 1
    - Area 2
    - SMP Area Surface Environment Assessment
- SMP Area 1 Approvals and conditions, Management Plans, Monitoring Programs
- Panel 1 (SMP Area 1) Progress to date

- Subsidence Results Panel 1, impacts and remediation
- SMP Area 2 Key surface features
    - Man made and Natural features potentially impacted by subsidence, including
        - Properties
        - Roads
        - Powerlines
        - Waterlines
        - Dams
        - Other infrastructure
- Abel SMP Area 2 Subsidence Assessment and Predictions
- Abel SMP Area 2 Subsidence Impacts
- Abel SMP Area 2 Proposed Subsidence Monitoring
- Abel SMP Area 2 Mining Schedule

5. Surface Filed trip

A Field Visit of the surface areas was then undertaken of SMP Areas 1 & 2 as per attached plan. The surface area where Panel 1 had undermined was pegged out to show both the areas where the surface had already been undermined by Panel 1 and where some of the Panels of SMP Area 2 were located.

6. Lunch/ open forum

Lunch was provided on return to the mine site and an opportunity provided for informal discussions on any items for consideration in the SMP Area 2 preparation. No issues were raised.

The meeting was closed at 1pm.
